Mr. President, cash receipts from farm marketings totaled $939.3 million in Oklahoma in 1969. Oklahoma farmers spent $606.6 million for such things as feed, livestock, seed and fertilizer, hired labor, machinery, and miscellaneous expenses, plus $162.7 million for depreciation and $87.3 million for farm property taxes and interest on farm mortgages and rent. Hundreds of communities and thousands of small businessmen throughout rural Oklahoma depend upon a strong farm economy for their livelihood, and without the enactment of a sound farm program such as we are considering here today, I feel that the billion dollar business of farming in Oklahoma is in jeopardy of a further tightening of the cost-price squeeze and additional economic pressures which might force more and more people off the farm and cause more and more small businessmen in rural Oklahoma to close their doors.

I commend the Committee on Agriculture and Forestry for including a section in the bill dealing with rural development. Specifically, I commend the distinguished Senator from Georgia (Mr. TALMADGE) who, I understand, authored the section on rural development. I believe we will all agree that it is in the best interest of the country to develop a national policy which will stabilize our population and perhaps even bring about a reverse in the present trend of population migration from our rural areas into our already overcrowded cities. Development of our rural areas and small towns, with the provision of adequate private jobs for our people in these areas, is the basic answer to this problem, and I feel that nothing short of a full commitment such as recommended by the committee will bring this about. We should have not only a congressional commitment, but a commitment on the part of every level of government—local, State, and Federal—to a policy of sound balance of population between rural and urban America, and I believe that the rural development program contained in this legislation is a step in the right direction toward developing such a policy.

Mr. President, I support the adoption of the pending farm bill as the best we can do this session.

Mr. HRUSKA. Mr. President, commendations for good work are due to the Senator from Louisiana and the Senator from North Dakota and their committee members in getting this bill to the Senate floor and the direction which they have given to the debate on H.R. 18546 up to this time. I do not intend to make any extended remarks but I do feel it is of utmost importance that we proceed with prompt consideration and passage of a farm bill.

While the farm bill reported by the committee is not everything I would like, it is a better bill and provides a better program than we now have.

With fall wheat planting time nearly upon us, however, we must understand the present pressure being felt by the farmers of Nebraska and the other wheat-producing States. Basic laws under which they have been operating expire with this crop year. In the absence of new legislation, wheat producers are at a loss as to how they should proceed with their planning and their planting. Of course other producers are in the same situation, but do not have the same pressing time problem.

Because of the critical time problem, I respectfully urge my colleagues to make every effort to complete the consideration of this bill this evening. I appreciate that the committee, along with Secretary of Agriculture Hardin, has been working very hard against a deadline to reach prompt agreement on a good general farm bill. I am asking that the Senate now apply the same urgency to the passage of this bill.

The Nation's farmers have been caught in a vicious cost-price squeeze that has threatened even the most efficient of our family farms. Prices which farmers have to pay have risen well over 100 percent in 15 years, while prices they receive for their crops have remained the same, or in some cases declined.

If we are to maintain a strong national economy, both urban and rural, it is essential we pass a good farm bill. I hope that all Senators—regardless of whether they come from farm States—realize the full importance of a healthy and prosperous agriculture industry. Party and regional interests must be set aside, for the needs of rural America are vital to the interests of urban America.

Productivity and abundance of farm output is a built-in guarantee that wholesale food prices will continue to remain relatively lower than all other items of the family budget. Farmers deserve and must have the opportunity to earn a decent living comparable to workers in other industries. If they cannot, they will leave the farm in increasing numbers. The eventual result will be higher prices for food and a further flight to already overcrowded cities. Consumers stand to lose most if agriculture is allowed to sink into a depression.

Our national economy starts with an agricultural base—a sound, vigorous agricultural industry interrelates with the automotive, fuel, chemical, and other industries that supply and service farmers and from whom the farmer buys. City workers have a vested interest in the agricultural process—in a direct sense the steelworker in Pittsburgh and the tractor maker in Detroit are partners in the agricultural effort.

As I said a few moments ago, this bill is not everything I would like, but it is an improvement. It will give the farmers more flexibility in making their own farm operating decisions and it will put a greater reliance on the marketplace. It seems to me that this feature is sound and in the best tradition of America.

One of the main differences between the Senate version and the House version relates to the price support for corn. The House-passed bill provides for a loan price support not in excess of 90 percent of parity. I do not quarrel with the figure as a ceiling, although I would prefer that it be 100 percent. However, there is no floor provided in the House bill, and that is regarded as a deficiency.

Many of the feed grain and wheat producers are concerned about having a floor which would protect them in the event of adverse circumstances—at least to cover their costs. In my opinion I feel that we should pass the $1 per bushel price support for corn as provided in the Senate bill. Likewise the $1.25 guarantee for wheat will give some of the needed protection to our wheat producers.

In regard to the limitation of farm subsidy payments as provided in the bill, I feel that we must work out a formula that in limiting the payment would at the same time permit the program to proceed and not be impaired by the larger operators withdrawing from the program. If there is to be a program to protect all the farmers, there must be cooperation by the large owners or enough of them to make an impact upon the reduction in production. In my opinion the $55,000 limitation is a desirable limit which will insure the continuation of a workable program. A lower limit would seriously jeopardize the passage of the bill. A failure to pass new legislation would have a disastrous effect on farmers' income.

The main goals which I seek for Federal farm programs are those sought by all of us; namely, to strengthen farm income, stabilize the economy of rural

America, open new markets for farm produce, and give increased freedom of decision to the farmer. This bill will take us a little way upon that road. I urge that we join together to dispose of this bill as promptly as possible.

INDEMNIFICATION OF BEEKEEPERS

Mr. McGOVERN. Mr. President, the farm bill approved by the Committee on Agriculture and Forestry does not include a provision which had been included by the House, relating to the indemnification of beekeepers who suffer pesticide losses. The support would be available to honey producers whose colonies have been damaged since January 1967, through no fault of their own, from the use of commercial pesticides and poisons which have been approved for use by Federal agencies.

As described by the report of the House Agriculture Committee, the provision would place the burden on the beekeeper to show that he took all reasonable precautions and that he did not have adequate warning. There would be no reimbursement in cases where he failed to use the opportunity to remove his colonies from the area of pesticide use.

In my view this provision is both reasonable and necessary. I hope the Senate conferees will accept it.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on agreeing to the committee amendment in the nature of a substitute, as amended.

The amendment was agreed to.

The PRESIDING OFFICER. The question is on the engrossment of the amendment and the third reading of the bill.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill (H.R. 18546) was read the third time.

Mr. MANSFIELD. Mr. President, I ask for the yeas and nays on final passage.

The yeas and nays were ordered.

Mr. ELLENDER. Mr. President, I yield back the remainder of my time.

Mr. GRIFFIN. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. All remaining time on the bill has now been yielded back.

The question is, the bill having been read the third time, Shall it pass?

On this question the yeas and nays have been ordered and the clerk will call the roll.

The legislative clerk called the roll.

Mr. SCOTT. On this vote I have a pair with the senior Senator from South Dakota (Mr. MUNDT). If he were present, he would vote "yea." If I were at liberty to vote, I would vote "nay." I therefore withhold my vote.

The rollcall was concluded.

Mr. BYRD of West Virginia. I announce that the Senator from Nevada (Mr. CANNON), the Senator from Connecticut (Mr. DODD), the Senator from Indiana (Mr. HARTKE), the Senator from Washington (Mr. JACKSON), the Senator from Massachusetts (Mr. KENNEDY), the Senator from Washington (Mr. MAGNUSON), the Senator from Minnesota (Mr. MCCARTHY), the Senator from Wyoming (Mr. MCGEE), the Senator from Utah (Mr. Moss), the Senator from Rhode Island (Mr. PASTORE), the Senator from West Virginia (Mr. RANDOLPH), the Senator from Georgia (Mr. RUSSELL), the Senator from Maryland (Mr. TYDINGS), the Senator from New Jersey (Mr. WILLIAMS), and the Senator from Ohio (Mr. YOUNG) are necessarily absent.

I further announce that, if present and voting, the Senator from Indiana (Mr. HARTKE), the Senators from Washington (Mr. JACKSON and Mr. MAGNUSON), the Senator from Wyoming (Mr. MCGEE), the Senator from Rhode Island (Mr. PASTORE), the Senator from West Virginia (Mr. RANDOLPH), the Senator from Georgia (Mr. RUSSELL), the Senator from New Jersey (Mr. WILLIAMS), and the Senator from Ohio (Mr. YOUNG) would each vote "yea."

Mr. GRIFFIN. I announce that the Senator from Tennessee (Mr. BAKER), the Senator from New Hampshire (Mr. COTTON), the Senator from Nebraska (Mr. CURTIS), the Senator from New York (Mr. GOODELL), the Senator from Oregon (Mr. HATFIELD), the Senator from Idaho (Mr. JORDAN), the Senator from California (Mr. MURPHY), the Senator from Vermont (Mr. PROUTY), and the Senator from Texas (Mr. TOWER) are necessarily absent.

The Senator from Maryland (Mr. MATHIAS) is absent on official business.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

The Senator from Arizona (Mr. GOLDWATER) is detained on official business.

If present and voting, the Senator from Tennessee (Mr. BAKER), the Senator from Nebraska (Mr. CURTIS), the Senator from Oregon (Mr. HATFIELD), the Senator from Idaho (Mr. JORDAN), the Senator from Vermont (Mr. PROUTY), and the Senator from Texas (Mr. TOWER) would each vote "yea."

The pair of the Senator from South Dakota (Mr. MUNDT) has been previously announced.

On this vote, the Senator from California (Mr. MURPHY) is paired with the Senator from New York (Mr. GOODELL). If present and voting, the Senator from California would vote "yea" and the Senator from New York would vote "nay."

The result was announced—yeas 65, nays, 7, as follows:

[No. 299 Leg.]

YEAS—65

Aiken	Fannin	Metcalf
Allen	Fong	Miller
Allott	Fulbright	Mondale
Anderson	Gore	Montoya

Percy	Smith, Ill.	

PRESENT AND GIVING A LIVE PAIR, AS PREVIOUSLY ANNOUNCED—1

Scott, against.

NOT VOTING—27

Baker	Jackson	Murphy
Cannon	Jordan, Idaho	Pastore
Cotton	Kennedy	Prouty
Curtis	Magnuson	Randolph
Dodd	Mathias	Russell
Goldwater	McCarthy	Tower
Goodell	McGee	Tydings
Hartke	Moss	Williams, N.J.
Hatfield	Mundt	Young, Ohio

So the bill (H.R. 18546) was passed.

Mr. ELLENDER. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. MILLER. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ELLENDER. Mr. President, I move that the Senate insist upon its amendments and request a conference with the House, and that the Chair be authorized to appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer (Mr. COOK) appointed Mr. ELLENDER, Mr. HOLLAND, Mr. EASTLAND, Mr. TALMADGE, Mr. AIKEN, Mr. YOUNG of North Dakota, and Mr. MILLER, conferees on the part of the Senate.

Mr. ELLENDER. Mr. President, I ask unanimous consent that the bill be printed as passed by the Senate.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, it is difficult to describe just how deeply the Senate is indebted to the distinguished senior Senator from Louisiana (Mr. ELLENDER). Having served longer than any other chairman of the Committee on Agriculture and Forestry, he truly has devoted the greatest expertise and experience possible to the interests and problems of the American farmer and of the American farm. His record for length of service to the agricultural needs of the Nation is equaled only by the depth of his understanding of those needs. To the handling of this measure he applied the immense skill and ability that has characterized his many, many years of public service. We are deeply grateful.

We are grateful as well to the distinguished senior Senator from North Dakota (Mr. YOUNG). He, too, has served the American farmer long and faithfully. He, too, deserves the highest praise of the Senate. His strong efforts on this measure were indispensable.

As a final thought I only wish to offer my appreciation to the entire Senate. Each Member cooperated splendidly to enable final disposition of this bill tonight.

BANK HOLDING COMPANY ACT AMENDMENTS OF 1970

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate turn to the consideration of Calendar No. 1094, H.R. 6778, I do this so that it will be the pending business.

The PRESIDING OFFICER. The bill will be stated by title.

The title of the bill was read, as follows:

A bill (H.R. 6778) to amend the Bank Holding Company Act of 1956, and for other purposes.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Banking and Currency with an amendment to strike out all after the enacting clause and insert:

That this Act may be cited as the "Bank Holding Company Act Amendments of 1970".

TITLE I—BANK HOLDING COMPANIES

SEC. 101. (a) Section 2(a) of the Bank Holding Company Act of 1956 (12 U.S.C. 1841) is amended to read as follows:

"SEC. 2. (a)(1) Except as provided in paragraph (5) of this subsection, 'bank holding company' means any company which has control over any bank or over any company that is or becomes a bank holding company by virtue of this Act.

"(2) Any company has control over a bank if—

"(A) the company directly or indirectly or acting through one or more other persons has power to vote 25 per centum or more of any class of voting securities of the bank;

"(B) the company controls in any manner the election of a majority of its directors or trustees; or

"(C) the Board determines, after notice and opportunity for hearing, that the company directly or indirectly exercises a controlling influence over the management or policies of the bank.

"(3) For the purposes of any proceeding under paragraph (2)(C) of this subsection, there is a presumption that any company which directly or indirectly holds with power to vote less than 5 per centum of any class of voting securities of a given bank does not have control of that bank.

"(4) In any administrative or judicial proceeding under this Act, other than a proceeding under paragraph (2)(C) of this subsection, a company may not be held to have had control of any given bank at any given time unless that company, at the time in question, directly or indirectly held with power to vote 5 per centum or more of any class of voting securities of the bank, or had already been found to have control in a proceeding under paragraph (2)(C).

"(5) Notwithstanding any other provision of this subsection—

"(A) No bank and no company owning or controlling voting shares of a bank is a bank holding company by virtue of its ownership or control of shares in a fiduciary capacity, except as provided in paragraphs (2) and (3) of subsection (g) of this section, but bank shares acquired after the date of enactment of the Bank Holding Company Act Amendments of 1970 shall not be deemed for the purposes of this sentence to have been acquired in a fiduciary capacity if the acquiring bank has discretionary authority to exercise voting rights with respect thereto.

"(B) No company is a bank holding company by virtue of its ownership or control of shares acquired by it in connection with its underwriting of securities if such shares are held only for such period of time as will permit the sale thereof on a reasonable basis.

"(C) No company formed for the sole purpose of participating in a proxy solicitation is a bank holding company by virtue of its control of voting rights of shares acquired in the course of such solicitation.

"(D) No company is a bank holding company by virtue of its ownership or control of any bank operated within the United States principally for the purpose of conducting or facilitating transactions in foreign commerce, if the Board determines by regulation or order, and subject to any terms and conditions which may be imposed thereby, that such ownership or control would not be substantially at variance with the purposes of this Act and would be in the public interest.

"(E) No trust company which is an insured bank under the Federal Deposit Insurance Act is a bank holding company by virtue of its ownership or control of one bank located in the same State, if (i) such ownership or control existed on the date of enactment of the Bank Holding Company Act Amendments of 1970 and is specifically authorized by applicable statute law, and (ii) the trust company does not after that date acquire an interest in any company that, together with any other interest it holds in that company, will exceed 5 per centum of the voting shares of that company, except that this limitation shall not be applicable to investments of the trust company, direct and indirect, which are otherwise in accordance with the limitations applicable to national banks under section 5316 of the Revised Statutes (12 U.S.C. 24).

"(6) For the purposes of this Act, any successor to a bank holding company shall be deemed to be a bank holding company from the date on which the predecessor company became a bank holding company."

(b) Section 2(b) of such Act is amended—

(1) by inserting "partnership," after "corporation,";

(2) by striking out "(1)";

(3) by striking out ", or (2) any partnership"; and

(4) by adding after the period a new sentence as follows: "'Company covered in 1970' means a company which becomes a bank holding company as a result of the enactment of the Bank Holding Company Act Amendments of 1970 and which would have been a bank holding company on March 24, 1969, if those amendments had been enacted on that date.

(c) The first sentence of section 2(c) of such Act is amended to read as follows: "'Bank' means any institution organized under the laws of the United States, any State of the United States, the District of Columbia, any territory of the United States, Puerto Rico, Guam, American Samoa, or the Virgin Islands which (1) accepts deposits that the depositor has a legal right to withdraw on demand, and (2) engages in the business of making commercial loans. Such term does not include any organization operating under section 25 or section 25(a) of the Federal Reserve Act, or any organization which does not do business within the United States except as an incident to its activities outside the United States."

(d) Section 2(d) of such Act is amended—

(1) by striking out "or (2)" and inserting in lieu thereof "(2)"; and

(2) by striking out the period and inserting in lieu thereof the following: "; or (3) any company with respect to the management of policies of which such bank holding company has the power, directly or indirectly, to exercise a controlling influence, as determined by the Board, after notice and opportunity for hearing."

(e) Section 2 of such Act is further amended by adding at the end thereof a new subsection as follows:

"(i) For the purposes of this Act, no company shall be deemed to own, control, hold shares of, or control the election of directors of any other business entity solely by virtue of attributing to or aggregating with the interests of the company the ownership or other interests of one or more individuals in such entity."

SEC. 102. Section 3 of the Bank Holding Company Act of 1956 (12 U.S.C. 1842) as amended—

(1) by adding at the end of subsection (a) a new sentence as follows: "For the purpose of the preceding sentence, bank shares acquired after the date of enactment of the Bank Holding Company Act Amendments of 1970, shall not be deemed to have been acquired in good faith in a fiduciary capacity if the acquiring bank has discretionary authority to exercise voting rights with respect thereto.";

(2) by adding at the end of subsection (b) a new sentence as follows: "In the event of the failure of the Board to act on any application for approval under this section within the ninety-one-day period which begins on the date of submission to the Board of the complete record on that application, the application shall be deemed to have been granted."; and

(3) by adding at the end thereof the following new subsection:

"(e) Every bank that is a holding company and every bank that is a subsidiary of such a company shall become and remain an insured bank as such term is defined in section 3(h) of the Federal Deposit Insurance Act."

SEC. 103. Section 4 of the Bank Holding Company Act of 1956 (12 U.S.C. 1843) is amended—

(1) by striking out paragraph (2) by subsection (a) and inserting in lieu thereof the following:

"(2) after two years from the date as of which it becomes a bank holding company, or in the case of a company which has been continuously affiliated since May 15, 1955, with a company which was registered under the Investment Company Act of 1940, prior to May 15, 1955, in such a manner as to constitute an affiliated company within the meaning of that Act, after December 31, 1978, or, in the case of a company covered in 1970, after December 31, 1975 (or such other date not later than December 31, 1980 as the Board may by order or regulation prescribe), retain direct or indirect ownership or control of any voting shares of any company which is not a bank or bank holding company or engage in any activities other than (A) those of banking or of managing or controlling banks and other subsidiaries authorized under this Act or of furnishing services to or performing services for its subsidiaries, and (B) those permitted under paragraph (8) of subsection (c) of this section subject to all the conditions specified in such paragraph or in any order or regulation issued by the Board under such paragraph: *Provided*, That a company covered in 1970 may also engage in those activities in which directly or through a subsidiary (i) it was lawfully engaged on March 24, 1969 (or on a date subsequent to March 24, 1969 in the case of activities carried on as the result of the acquisition by such company or subsidiary, pursuant to a binding written contract entered into on or before March 24, 1969, of another company engaged in such activities at the time of the acquisition), and (ii) it has been continuously engaged since March 24, 1969 (or such subsequent date). Nothing in this paragraph shall be construed to authorize any bank holding company referred to in the preceding proviso, or any subsidiary thereof, to engage in activities authorized by that proviso through the acquisition, pursuant to a contract entered into after March 24, 1969, of any interest in or the assets of a going concern engaged in such activities.";

(2) by striking out "period" in the last sentence of subsection (a) and inserting in lieu thereof "two-year period";

(3) by striking out that part of the text of subsection (c) which precedes the first numbered paragraph and inserting in lieu thereof the following: "The prohibitions in

this section shall not apply to any bank holding company which is (i) a labor, agricultural, or horticultural organization and which is exempt from taxation under section 501 of the Internal Revenue Code of 1954, or (ii) a company covered in 1970 more than 85 per centum of the voting stock of which was collectively owned on March 24, 1969, and continuously thereafter, directly or indirectly, by or for members of the same family, or their spouses, who are lineal descendants of common ancestors; and such prohibitions shall not, with respect to any other bank holding company, apply to—";

(4) by striking out paragraph (8) of subsection (c) and inserting in lieu thereof the following:

"(8) shares retained or acquired with the approval of the Board in any company (other than a company engaged principally in the issue, flotation, underwriting, public sale, or distribution at wholesale or retail or through syndicate participation of stocks, bonds, debentures, notes, or other securities) which except for such other activities as are permitted under this Act is engaged solely in activities that the Board has determined, after notice and opportunity for hearing, are functionally related to banking in such a way that their performance by an affiliate of a bank holding company can reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased competition, conflicts of interest, or unsound banking practices;";

(5) by striking out paragraph (9) of subsection (c) and inserting in lieu thereof the following:

"(9) shares held or activities conducted by any company organized under the laws of a foreign country the greater part of whose business is conducted outside the United States, if the Board by regulation or order determines that, under the circumstances and subject to the conditions set forth in the regulation or order, the exemption would not be substantially at variance with the purposes of this Act and would be in the public interest;";

(6) by striking out the period at the end of paragraph (10) and inserting in lieu thereof a semicolon, and by adding after paragraph (10) the following:

"(11) shares owned directly or indirectly by a company covered in 1970 in a company which does not engage in any activities other than those in which the bank holding company, or its subsidiaries, may engage by virtue of this section, but nothing in this paragraph authorizes any bank holding company, or subsidiary thereof, to acquire any interest in or assets of any going concern (except pursuant to a binding written contract entered into before March 24, 1969, or pursuant to another provision of this Act) other than one which was a subsidiary on March 24, 1969;

"(12) shares retained or acquired, or activities engaged in, by any company covered in 1970, or by any subsidiary thereof, if such company—

"(A) within the applicable time limits prescribed in subsection (a)(2) of this section (i) ceases to be a bank holding company, or (ii) ceases to retain direct or indirect ownership or control of those shares and to engage in those activities not authorized under this section; and

"(B) complies with such other conditions as the Board may by regulation or order prescribe;

"(13) shares of, or activities conducted by, any company which does no business in the United States except as an incident to its international or foreign business, if the Board by regulation or order determines that, under the circumstances and subject to the conditions set forth in the regulation or order, the exemption would not be substantially at variance with the purposes of this Act and would be in the public interest; or

"(14) shares retained or acquired or activities conducted in accordance with an order, ruling, or regulation issued by the Board pursuant to this section before it was amended by the Bank Holding Company Act Amendments of 1970.

In making its determinations under paragraph (8) of this subsection, the Board may differentiate between activities commenced de novo and activities commenced by the acquisition in whole or in part of a going concern. In the event of the failure of the Board to act on any application for an order under such paragraph, within the ninety-one-day period which begins on the date of submission to the Board of the complete record on that application, the application shall be deemed to have been granted. The Board shall include in its annual report to the Congress a description and a statement of the reasons for approval of each activity approved by it by order or regulation under such paragraph during the period covered by the report."; and

(7) by redesignating subsection (d) as subsection (f), and by adding after subsection (c) new subsections as follows:

"(d)(1) Except as otherwise provided in this subsection, the prohibitions in this section shall not apply to any company which becomes, as a result of the enactment of the Bank Holding Company Act Amendments of 1970, a bank holding company on the date of such enactment, if such company has only one subsidiary bank and the net worth of that bank does not exceed the greater of—

"(A) $3,000,000; or

"(B) an amount equal to (i) 25 per centum of the combined net worth of such company and all its subsidiaries, or (ii) $50,000,000, whichever is the lesser.

The net worth of any company or subsidiary thereof shall be determined in accordance with rules and regulations prescribed by the Board.

"(2) The Board by order, after opportunity for hearing, may—

"(A) waive the limitation specified in clause (B)(ii) of paragraph (1) with respect to the net worth of a bank, if it determines that such action is consistent with the purposes of this Act and is necessary or appropriate (i) to avoid undue hardship to the bank or its parent company, or (ii) to meet a public need for banking services not otherwise available; and

"(B) terminate or modify the exemption provided by clause (B) of paragraph (1) with respect to any company, if it determines, having due regard to the purposes of this section, that such action is necessary to prevent undue concentration of resources, decreased competition, conflicts of interest, or unsound banking practices.

"(3) No banking subsidiary of a bank holding company which is exempted under this subsection from the prohibitions of this section shall—

"(A) enter into a merger transaction pursuant to section 18(c) of the Federal Deposit Insurance Act without receiving the prior additional approval of the Board thereunder;

"(B) increase its capital by contributions from its nonbanking subsidiaries, its nonbanking parent, or from affiliates of such parent without the prior approval of the Board; or

"(C) pay dividends in excess of its current earnings.

"(e) With respect to any proceeding before the Board wherein an applicant seeks authority to engage directly or indirectly in a nonbanking activity pursuant to this section, a party who would become a competitor of the applicant or subsidiary thereof by virtue of the applicant's or its subsidiary's entry into that business, shall be a party in interest in such proceeding and, in the event of an adverse order of the Board, shall have the right as an aggrieved party to obtain judicial review thereof as provided in section 9."

SEC. 104. (a) As used in this section, the terms "bank", "bank holding company", "subsidiary", and "Board" have the meaning ascribed to such terms in section 2 of the Bank Holding Company Act of 1956. For purposes of this section only, the term "company", as used in section 2 of the Bank Holding Company Act of 1956, means any person, estate, trust, partnership, corporation, association, or similar organization, but does not include any corporation the majority of the shares of which are owned by the United States or by any State.

(b) A bank shall not in any manner extend credit, lease or sell property of any kind, or furnish any service, or fix or vary the consideration for any of the foregoing, on the condition, agreement, or understanding—

(1) that the customer shall obtain some other credit, property, or service from such bank, a bank holding company of such bank, or from any subsidiary of such bank holding company;

(2) that the customer provide some other credit, property, or service to such bank, the bank holding company of such bank, or to any subsidiary of such bank holding company; or

(3) that the customer shall not obtain some other credit, property, or service from a competitor of such bank, bank holding company of such bank, or any subsidiary of such bank holding company.

The Board may by regulation or order permit such exceptions to the foregoing prohibition as it considers will not be contrary to the purposes of this section.

(c) The district courts of the United States have jurisdiction to prevent and restrain violations of subsection (b) of this section and it is the duty of the United States attorneys, under the direction of the Attorney General, to institute proceedings in equity to prevent and restrain such violations. The proceedings may be by way of a petition setting forth the case and praying that the violation be enjoined or otherwise prohibited. When the parties complained of have been duly notified of the petition, the court shall proceed, as soon as possible, to the hearing and determination of the case. While the petition is pending, and before final decree, the court may at any time make such temporary restraining order or prohibition as it deems just. Whenever it appears to the court that the ends of justice require that other parties be brought before it, the court may cause them to be summoned whether or not they reside in the district in which the court is held, and subpenas to that end may be served in any district by the marshal thereof.

(d) In any action brought by or on behalf of the United States under subsection (b), subpenas for witnesses may run into any district, but in civil actions no writ of subpena may issue for witnesses living out of the district in which the court is held at a greater distance than one hundred miles from the place of holding the same without the prior permission of the trial court upon proper application and cause shown.

(e) Any person who is injured in his business or property by reason of anything forbidden in subsection (b) may sue therefor in any district court of the United States in which the defendant resides or is found or has an agent, without regard to the amount in controversy, and shall be entitled to recover three times the amount of the damages sustained by him, and the cost of suit, including a reasonable attorney's fee

(f) Any person may sue for and have injunctive relief, in any court of the United States having jurisdiction over the parties, against threatened loss or damage by reason of a violation of subsection (b), under the same conditions and principles as injunctive relief against threatened conduct that will cause loss or damage is granted by courts of equity and under the rules governing such proceedings. Upon the execution of proper bond against damages for an injunction improvidently granted and a showing that the danger of irreparable loss or damage is immediate, a preliminary injunction may issue.

(g) Any action to enforce any cause of action under this section shall be forever barred unless commenced within seven years after the cause of action accrued.

(h) Nothing contained in this section shall be construed as affecting in any manner the right of the United States or any other party to bring an action under any other law of the United States or of any State, including any right which may exist in addition to specific statutory authority, challenging the legality of any act or practice which may be proscribed by this section. No regulation or order issued by the Board under this section shall in any manner constitute a defense to such action.

TITLE II—PROVISIONS RELATING TO COINAGE

SEC. 201. Section 101 of the Coinage Act of 1965 (31 U.S.C. 391) is amended to read as follows:

"SEC. 101. (a) The Secretary may mint and issue coins of the denominations set forth in subsection (c) in such quantities as he determines to be necessary to meet national needs.

"(b) Any coin minted under authority of subsection (a) shall be a clad coin. The cladding shall be an alloy of 75 per centum copper and 25 per centum nickel, and shall weigh not less than 30 per centum of the weight of the whole coin. The core shall be copper.

"(c)(1) The dollar shall be 1.500 inches in diameter and weigh 22.68 grams.

"(2) The half dollar shall be 1.205 inches in diameter and weigh 11.34 grams.

"(3) The quarter dollar shall be 0.955 inches in diameter and weigh 5.67 grams.

"(4) The dime shall be 0.705 inches in diameter and weigh 2.268 grams.

"(d) Notwithstanding the foregoing, the Secretary is authorized to mint and issue not more than one hundred and fifty million one-dollar pieces which shall have—

"(1) a diameter of 1.500 inches;

"(2) a cladding of an alloy of eight hundred parts of silver and two hundred parts of copper; and

"(3) a core of an alloy of silver and copper such that the whole coin weighs 24.592 grams and contains 9.837 grams of silver and 14.755 grams of copper."

SEC. 202. For the purposes of this title, the Administrator of General Services shall transfer to the Secretary of the Treasury twenty-five million five hundred thousand fine troy ounces of silver now held in the national stockpile established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98–98h) which is excess to strategic needs. Such transfer shall be made at the value of $1.292929292 for each fine troy ounce of silver so transferred. Such silver shall be used exclusively to coin one-dollar pieces authorized in section 101(d) of the Coinage Act of 1965, as amended by this Act.

SEC. 203. The dollars initially minted under authority of section 101 of the Coinage Act of 1965 shall bear the likeness of the late President of the United States, Dwight David Eisenhower.

SEC. 204. Half dollars, as authorized under section 101(a)(1) of the Coinage Act of 1965, as in effect prior to the enactment of this Act may, in the discretion of the Secretary of the Treasury, continue to be minted until January 1, 1971.

SEC. 205. (a). The Secretary of the Treasury is authorized to transfer, as an accountable advance and at their face value, the approximately three million silver dollars now held in the Treasury to the Administrator of General Services. The Administrator is authorized to offer these coins to the public in the manner recommended by the Joint Commission on the Coinage at its meeting on May 12, 1969. The Administrator shall repay the accountable advance in the amount of that face value out of the proceeds of and at the time of the public sale of the silver dollars. Any proceeds received as a result of the public sale in excess of the face value of these coins shall be covered into the Treasury as miscellaneous receipts.

(b) There are authorized to be appropriated, to remain available until expended, such amounts as may be necessary to carry out the purposes of this section.

SEC. 206. The last sentence of section 3517 of the Revised Statutes, as amended (31 U.S.C. 324), is amended by striking the following: ", except that coins produced under authority of sections 101(a)(1), 101(a)(2), and 101(a)(3) of the Coinage Act of 1965 shall not be dated earlier than 1965".

SEC. 207. Section 4 of the Act of June 24, 1967 (Public Law 90–29; 31 U.S.C. 405a–1 note), is amended by adding at the end thereof the following new sentence: "Out of the proceeds of and at the time of any sale of silver transferred pursuant to this Act, the Treasury Department shall be paid $1.292929292 for each fine troy ounce."

SEC. 208. Section 3513 of the Revised Statutes (31 U.S.C. 316) and the first section of the Act of February 28, 1878 (20 Stat. 25; 31 U.S.C. 316, 458) are repealed.

SEC. 209. Coins produced under the authority of section 101(d) of the Coinage Act of 1965, as amended by this Act, shall bear such date as the Secretary of the Treasury determines.

Mr. MANSFIELD. Mr. President, there will be no further voting tonight.

UNANIMOUS-CONSENT AGREEMENT

Mr. BYRD of West Virginia. Mr. President, will the Senator yield briefly?

Mr. SPARKMAN. I yield.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that all debate on each of the Proxmire amendments, of which there are two, the amendment to be offered by the Senator from Utah (Mr. BENNETT), and each of the three amendments to be offered by the Senator from Massachusetts (Mr. BROOKE), be limited to 1 hour, with the time equally divided between the mover of the amendment and the manager of the bill; and that time on all other amendment to be offered by the Senator the exception of motions to lay on the table, be limited each to 30 minutes, the time to be equally divided between the mover of the amendment and the manager of the bill, and in the case of amendments to amendments the time to be divided between the mover of the amendment and the author of the basic amendment; the time on the bill to be limited to 1 hour, to be divided equally between the manager of the bill and the minority leader or his designee.

Mr. BENNETT. Mr. President, will the Senator yield?

Mr. BYRD of West Virginia. I yield.

Mr. BENNETT. On the Bennett amendment the manager of the bill will be in accord with the amendment, so the opposition should be in the control of the minority leader or his designee.

Mr. BYRD of West Virginia. I thank the Senator.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT OF SECTION 19(e) OF THE SECURITIES EXCHANGE ACT OF 1934

Mr. SPARKMAN. Mr. President, I ask the Chair to lay before the Senate a message from the House of Representatives on House Joint Resolution 1247.

The PRESIDING OFFICER (Mr. PACKWOOD) laid before the Senate House Joint Resolution 1247, to amend section 19(e) of the Securities Exchange Act of 1934, which was read twice by its title.

Mr. SPARKMAN. Mr. President, I ask unanimous consent that the Senate proceed to its immediate consideration.

The PRESIDING OFFICER. Is there objection to the present consideration of the House joint resolution?

There being no objection, the Senate proceeded to consider the joint resolution.

The joint resolution was ordered to a third reading, was read the third time, and passed.

AMENDMENT OF TITLE 39, UNITED STATES CODE, TO REGULATE THE MAILING OF UNSOLICITED CREDIT CARDS

Mr. SPARKMAN. Mr. President, I ask the Chair to lay before the Senate a message from the House of Representatives on H.R. 16542.

The PRESIDING OFFICER laid before the Senate H.R. 16542, to amend title 39, United States Code, to regulate the mailing of unsoliciated credit cards, and for other purposes, which was read twice by its title.

Mr. SPARKMAN. I ask unanimous consent that the Senate proceed to its immediate consideration.

The PRESIDING OFFICER. Is there objection to the pressure consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. SPARKMAN. Mr. President, some time ago the Senate passed a bill dealing with this same subject matter. It went to the House and was referred to the Committee on Banking and Currency there. In the meantime the House Post Office Committee had taken up this bill that has just been reported and has passed it.

My purpose in calling it up is to move that the Senate agree to the House bill with an amendment and that amendment will be to strike out the House language and insert the language initially passed by the Senate.

Mr. President, I move to strike all after the enacting clause and insert in lieu thereof the language contained in S. 721 as passed by the Senate on April 15, 1970.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Alabama.

The motion was agreed to.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to as follows:

That section 103 of the Truth in Lending Act (82 Stat. 146) is amended by redesignat-

ing subsections (j), (k), and (l) as subsections (p), (q), and (r), respectively, and by adding after subsection (i) the following:

"(j) The term 'adequate notice', as used in section 133, means a printed notice to a cardholder which sets forth the pertinent facts clearly and conspicuously so that a person against whom it is to operate could reasonably be expected to have noticed it and understood its meaning. Such notice may be given to a cardholder by printing the notice on any credit card, or on each periodic statement of account, issued to the cardholder, or by any other means reasonably assuring the receipt thereof by the cardholder.

"(k) The term 'credit card' means any card, plate, coupon book or other credit device existing for the purpose of obtaining money, property, labor, or services on credit.

"(l) The term 'accepted credit card' means any credit card which the cardholder has requested and received or has signed or has used, or authorized another to use, for the purpose of obtaining money, property, labor, or services on credit.

"(m) The term 'cardholder' means any person to whom a credit card is issued or any person who has agreed with the card issuer to pay obligations arising from the issuance of a credit card to another person.

"(n) The term 'card issuer' means any person who issues a credit card, or the agent of such person with respect to such card.

"(o) The term 'unauthorized use', as used in section 133, means a use of a credit card by a person other than the cardholder who does not have actual, implied, or apparent authority for such use and from which the cardholder receives no "benefit."

SEC. 2. (a) The Truth in Lending Act (82 Stat. 146) is amended by adding after section 131 the following sections:

"§ 132. Issuance of credit cards

"No credit card shall be issued except in response to a request or application therefor. This prohibition does not apply to the issuance of a credit card in renewal of, or in substitution for, an accepted credit card.

"§ 133. Liability of holder of credit card

"(a) A cardholder shall be liable for the unauthorized use of a credit card only if the card is an accepted credit card, the liability is not in excess of fifty dollars, the card issuer gives adequate notice to the cardholder of the potential liability, the card issuer has provided the cardholder with a self-addressed pre-stamped notification to be mailed by the cardholder in the event of the loss or theft of the credit card, and the unauthorized use occurs before the cardholder has notified the card issuer that an unauthorized use of the credit card has occurred or may occur as the result of loss, theft, or otherwise. Notwithstanding the foregoing, no cardholder shall be liable for the unauthorized use of any credit card which was issued on or after the effective date of this section, and, after the expiration of twelve months following such effective date, no cardholder shall be liable for the unauthorized use of any credit card regardless of the date of its issuance, unless (1) the conditions of liability specified in the preceding sentence are met, and (2) the card issuer has provided a method whereby the user of such card can be identified as the person authorized to use it. For the purposes of this section, a cardholder notifies a card issuer by taking such steps as may be reasonably required in the ordinary course of business to provide the card issuer with the pertinent information whether or not any particular officer, employee, or agent of the card issuer does in fact receive such information.

"(b) In any action by a card issuer to enforce liability for the use of a credit card, the burden of proof is upon the card issuer to show that the use was authorized or, if the use was unauthorized, then the burden of proof is upon the card issuer to show that the conditions of liability for the unauthorized use of a credit card, as set forth in subsection (a), have been met.

"(c) Nothing in this section imposes liability upon a cardholder for the unauthorized use of a credit card in excess of his liability for such use under other applicable law or under any agreement with the card issuer.

"(d) Except as provided in this section, a cardholder incurs no liability from the unauthorized use of a credit card.

"§ 134. It shall be unlawful to use the credit card of another without authorization

"Whoever, in a transaction affecting commerce, uses a credit card without the authorization of the holder shall, upon conviction thereof, be punished by imprisonment for a term not to exceed one year or fined a sum not to exceed $1,000, or both."

(b) The table of contents of chapter 2 of the Truth in Lending Act is amended by adding at the end thereof the following:

"132. Issuance of credit cards.

"133. Liability of holder of credit card."

SEC. 3. The amendments to the Truth in Lending Act made by this Act become effective as follows:

(1) Section 132 of such Act takes effect upon the date of enactment of this Act.

(2) Section 133 of such Act takes effect upon the expiration of 90 days after such date of enactment.

The PRESIDING OFFICER. The question is on the engrossment of the amendment and the third reading of the bill.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill (H.R. 16542) was read the third time and passed.

Mr. SPARKMAN. Mr. President, I move that the Senate insist upon its amendment and request a conference with the House of Representatives thereon, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer (Mr. PACKWOOD) appointed Mr. SPARKMAN, Mr. PROXMIRE, Mr. WILLIAMS of New Jersey, Mr. BENNETT, and Mr. TOWER conferees on the part of the Senate.

BANK HOLDING COMPANY ACT AMENDMENTS OF 1970

Mr. SPARKMAN. Mr. President, what is the pending business?

The PRESIDING OFFICER. The pending business is H.R. 6778, the Bank Holding Company Act Amendments of 1970.

Mr. BYRD of West Virginia. Mr. President, will the Senator yield?

Mr. SPARKMAN. I yield.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the time on the bill not start running until tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SPARKMAN. Mr. President, the issues raised by H.R. 6778 are among the most controversial and complex banking issues which the Senate has dealt with in many years.

The Bank Holding Company Act of 1956 was the result of many years of effort, and was caused by situations where several bank holding companies controlled many banks and entirely unrelated businesses as well. I think those of us who were in the Senate at that time will recall that the primary emphasis behind the bill was the fear of undue economic concentration occasioned by the combination of chain banking systems and unrelated businesses.

The provisions of the 1956 act contained an exemption of one-bank holding companies. Indeed, the committees found no abuses requiring control or divestiture in the case of one-bank holding companies. It was consequently found reasonable to exempt these companies from bank holding company legislation.

In 1966, the Bank Holding Company Act was amended to remove two other exemptions, one for long-term trusts for charitable institutions and companies registered before May 15, 1955, under the Investment Company Act of 1940.

A bill removing these exemptions was reported by the House Committee on Banking and Currency. During the course of debate on the House floor, it was amended to eliminate the exemption for one-bank holding companies. After hearings in the Senate Banking and Currency Committee, the House bill was amended to delete the section repealing the one-bank holding company exemption. It passed the Senate in that form and was readily accepted by the House of Representatives in the form in which it passed the Senate, without a conference.

This history is important because it has a direct bearing on the question of a proper and equitable date for a grandfather clause. Since Congress decided to exempt one-bank companies in 1956 and strongly ratified this decision in 1966, it can hardly be seriously argued that the public was on notice of an impending removal of the exemption. Thus, it would be patently unfair to adopt a grandfather clause dated prior to the time the public would be reasonably expected to know of the probability that the law would be changed.

Another important, but often overlooked change in the law was made in 1966, which originated in the Senate Banking and Currency Committee. This amendment made the provisions of section 23 A of the Federal Reserve Act relating to transactions between a bank and its affiliates applicable to all insured banks. The effect of the amendment was to render loans to affiliates by all banks entirely impracticable because of requirements for collateral to secure such loans. Thus, bank subsidiaries of a one-bank holding company were practically precluded from making loans to other affiliates of the holding company. I mention this change because it is often assumed that banks and bank holding companies are free to make loans on favorable terms to their affiliates and that this gives the latter unfair competitive advantages. As a matter of fact, this erroneous assumption was frequently stated during the course of our

recent hearings on the bank holding company amendments. To repeat, a bank in a holding company system, cannot, as a matter of economic feasibility, loan funds to other affiliates or subsidiaries of the holding company.

The Senate Committee on Banking and Currency held 3 weeks of hearings on this legislation, from May 12 through May 28, 1970. In addition to the House-passed bill, we had before us an administration bill, which Senator BENNETT and I introduced, a bill by Senator PROXMIRE, and a bill by Senator BROOKE.

The primary provisions of the bill as reported largely reflect the views of the Federal Reserve Board and are based upon the testimony of Chairman Burns. With one or two exceptions, which will be covered by the debate when amendments are offered, the bill meets the approval of the Federal agencies concerned with the matter, which include the Justice and Treasury Departments, the Federal Reserve Board, the Comptroller of the Currency, and the FDIC.

The bill as a whole represents a broad consensus of the committee's views, and the committee unanimously agreed to report it.

During the hearings held by the committee on this matter, we received many divergent recommendations dealing both with the substance of the issues and with whether or not there should even be legislation this year. I believe that the bill finally reported by the committee is a good bill and a fair bill. It accomplishes the primary objectives of the legislation while assuring that this change in congressional policy does not occasion undue and unnecessary hardship. It protects the various interested nonbanking industries from banking competition which may be unfair to them, and, at the same time, does not arbitrarily prohibit bank holding companies to engage in appropriate activities.

The committee bill proposes immediate legislation, to be administered by the Federal Reserve Board. It allows entry into "functionally related" activities only with the approval of the Board and under criteria which will reflect all factors of public interest, rather than merely the question of which parties will be allowed to compete. The bill also contains provisions enhancing the ability of competitors to challenge decisions of the Federal Reserve Board and it contains strong provisions prohibiting "tie-ins" between banks and their affiliates. Every specific complaint against bank holding company competition was related to the ability of competitors to challenge Board decisions, or to the possibility of tie-ins between the banks and their affiliates.

Earlier I referred to the decision of the committee and the Congress in 1966 to continue the one-bank holding company exemption. Developments over the past 3 years have occurred which require reconsideration of this decision.

Federal Reserve Board Chairman Burns testified that there are 51 banks in the United States with deposits of $1 billion or more. Of these, nine are subsidiaries of registered multibank holding companies. Of the remaining 42, one has been owned by a holding company since 1927. Another one was acquired by a large company in 1965. Beginning in late 1967, however, a greater number of the banks with assets in excess of $1 billion have become affiliated with nonregulated one-bank holding companies.

At present, approximately 23 banks with a billion dollars or more in deposits are subsidiaries of a one-bank holding company. These include the six largest banks in the country, which cumulatively hold more than 20 percent of the deposits of the entire Nation's banking system. It has been estimated that the percentage of the Nation's total banking deposits which are held by banks controlled by one-bank holding companies has grown from less than 10 percent in early 1967 to more than 40 percent at the present time.

In view of the large growth of assets held by one-bank holding companies, the committee agreed that it is necessary to amend the Bank Holding Company Act to bring these companies under regulation.

In making this decision, I would like to point out the agreement of the committee with all of the Government regulatory agencies who testified that there have been no abuses effectuated through the one-bank holding company device. It is clearly understood that the legislation is to prevent possible future problems rather than to solve existing ones. Illustrative of this point, Federal Deposit Insurance Corporation Chairman Frank Wille, in his testimony before the committee, stated:

> Few acquisitions had actually been completed by these recently formed one-bank holding companies, and almost all are in bank related fields that would have followed within the scope of the Federal Reserve Board precedents established under the 1956 act. Because of this, and because the more traditional one-bank holding companies in existence prior to the 1966 amendments had presented few problems, the task of this committee must be considered preventive in nature rather than remedial of proven abuse.

It should be noted, moreover, that the mere recitation of the figures describing control of banking assets by one-bank holding companies does not reflect any substantial attempt to control nonbank assets. I think it is fair to say that all of the larger banks in the one-bank holding company system have acquired only those activities which would have been approved has they been under regulation by the Federal Reserve Board in any event and are and will continue to await the enactment of this legislation before proceeding to acquire any activity not clearly within that category.

There have been a few acquisitions of what would appear to be permissible activities which have been challenged by the Antitrust Division of the Justice Department, not on grounds that the activity itself was improper, but on antitrust grounds. And this points up another important consideration in connection with this legislation. That is, that the antitrust statutes already apply to such acquisitions and will continue to be applicable.

As Assistant Attorney General McLaren testified:

> We believe that bank acquisitions presenting structural dangers may be challenged under present antitrust law, particularly section 7 of the Clayton Act. Section 7 is an important weapon. Under it, we can challenge bank acquisitions which eliminate substantial direct horizontal competition in any particular financing field; we can challenge mergers which involve significant vertical foreclosure; and we can challenge product extension mergers which involve significant loss of potential competition or create dangers of tie-ins or reciprocity.

Attorney General McLaren described example of challenges which his department had already made and went on to state:

> These cases involve big nationally significant enterprises with anticompetitive effects in various markets, large and small. The same types of theories could be applied to deal with regional market situations and local market situations. The Antitrust Division simply would not have the time and resources to apply even a well-established merger theory to the many anticompetitive acquisitions that might occur in local or relatively local markets.

The problem of one-bank holding companies, from an antitrust standpoint, therefore, seems to be not an absence of substantive law upon which cases of economic concentration can be made, but rather a desire, as Mr. McLaren testified, "to screen acquisitions and lighten the load on the Antitrust Division in this area."

GRANDFATHER CLAUSE

After reaching the decision to remove the one-bank holding company exemption, it became necessary for the committee to determine what course of action was to be taken in regard to those one-bank holding companies which are engaged either directly or through subsidiaries, in activities to be prohibited by the act.

Under the circumstance, the committee decided the most appropriate measure would allow existing one-bank holding companies to continue to engage in the activities and retain the subsidiaries they held on a certain date, rather than requiring them to cease the activity or divest the subsidiary.

Accordingly, the committee adopted a provision which would allow a company being brought under the Bank Holding Company Act by this legislation to engage in the activities in which it was directly or through a subsidiary engaged on March 24, 1969, so long as it has been continuously engaged in such activity since March 24, 1969.

As was noted earlier, Congress has twice refrained from placing one-bank holding companies under the provisions of the Bank Holding Company Act. The latest such decision was only 4 years ago. Because of this, it was the desire of the committee to choose a grandfather date upon which all concerned parties should have had reasonable notice that the Bank Holding Company Act would probably be amended to remove the one-bank holding company exemption.

On March 24, 1969, the administration proposal to remove this exemption was introduced in the Senate by myself and Senator BENNETT.

The committee believes that it is entirely appropriate for a company to be allowed to continue to engage in those

activities in which it was engaged on March 24, 1969, and to expand those activities so long as such expansion does not produce anticompetitive or other adverse effects. Accordingly, the committee provided that such a company could not acquire, either by stock acquisition or purchase or the assets, a going concern engaged in the grandfathered activities.

The committee included a provision which would allow the holding company the necessary flexibility to reorganize within its internal structure so that it can shift responsibility for operating one or more of its grandfathered activities from one subsidiary to another, the holding company itself to a subsidiary, or to form a new subsidiary for this particular purpose.

Thus, as has been pointed out, the holding company entitled to the grandfather clause will be limited in the activities it may conduct under that clause and will be restricted in the type of acquisitions it may make. The basic long-term expansion of these companies that decide to keep their banks will be committed to those activities which are permitted to bank holding companies generally. In this regard, the one-bank holding companies which become registered bank holding companies as a result of this legislation will have the rights and privileges of any other registered bank holding company, including the right subject to the approval of the Federal Reserve Board, to own more than one bank and to engage in activities functionally related to banking.

CONTROL PROVISION

The current provisions of the Bank Holding Company Act provide that a company is a bank holding company—assuming it meets other requirements—if it directly or indirectly owns, controls, or holds with power to vote 25 percent or more of the voting shares of each of two or more banks, or if it controls in any manner the election of a majority of the directors of each of two or more banks. We are aware that it is possible to control the affairs of a company without owning 25 percent or more of its outstanding voting stock.

The bank regulatory agency witnesses recommended that the provisions of the existing act be changed in order to allow a finding of control even when less than 25 percent of the outstanding voting shares of the bank stock were not held by the subject company.

Accordingly, the committee approved a provision which would allow the Federal Reserve Board to make a finding of control, after notice and opportunity for hearing, where the company "directly or indirectly exercises a controlling influence over the management or policies of the bank" without regard to the 25-percent stock ownership provision. However, a presumption is established in the bill that a company which controls less than 5 percent of the voting stock of the bank does not control that bank. The percentage of stock owned by the company will be determined by adding the amount of stock the company owns for its own benefit together with the amount, if any, its own indirectly through a subsidiary or otherwise, with power to vote.

DIVESTITURE

Even with the grandfather clause devised by the committee, some companies will be required by the provisions of the act to divest one or more subsidiaries, or cease to engage in one or more activities by virtue of the fact that these were undertaken after the grandfather date or in order to comply fully with all provisions of the act. Moreover, there will be a number of companies that will find it impossible to continue normal growth under the act even with the grandfather clause that has been adopted by the committee. It will be necessary for those companies to divest their banks.

In deciding what provision to make for a divestiture period, there were several factors which were carefully considered by the committee.

It is anticipated that the Congress will follow precedent and pass a bill providing companies required to make divestitures under this legislation with relief from an undue tax burden as a result of such divestiture.

It would be inequitable to require these divesting companies to commit themselves to a divestiture plan without knowing what their tax situation will be in regard to such divestiture. Accordingly, it was deemed necessary to provide a divestiture period of sufficient length that these companies will have adequate time to make their divestiture plans after the appropriate tax relief measure is passed by Congress.

Another factor considered by the committee is the current state of the economy. Market conditions are far less than ideal, availability of money and credit is far below optimum, and the economy in general is going through a period of readjustment. These facts are persuasive that divesting companies should be given more time to divest than would seem to be necessary under better economic conditions.

Finally, the committee is aware that may be a large number of banks or nonbanking subsidiaries which will be divested as a result of the passage of this legislation. Under these circumstances, the sellers may not be able to get fair market value for the assets they are divesting, particularly if they are all required to divest simultaneously within a relatively short period of time.

Because of these various factors, the committee adopted a provision which would allow companies required to make divestitures under the act an initial period of 5 years within which to do so, with the opportunity of obtaining up to an additional 5 years upon the approval of the Federal Reserve Board. This provision would allow the Federal Reserve Board either to make a general extension of the divestiture period by a regulation to that effect, or it would allow the Board to grant specific extensions in individual cases.

The committee adopted a provision which will allow any company covered by this legislation to retain or acquire whatever shares, or engage in whatever activities, it wishes so long as, within the applicable divestiture period, it either ceases to be a bank holding company or ceases to retain direct or indirect ownership or control of share or to engage in activities that are not authorized under the applicable section of the act.

In order to insure that there is no evasion of the general intent and purpose of this provision, the committee further provided that companies utilizing this authority must comply with such other conditions as the Board may by regulation or order prescribe. If it appears to the Board that there is some incentive for a holding company or companies to make an acquisition that would not serve the purpose of this provision, then the Board is given the express authority to issue regulations or orders to prevent such an acquisition. The committee contemplates that the Board will insure that the authority to make the acquisitions and engage in the activities provided by this particular provision will not be utilized by a bank holding company covered by this legislation to go into activities and make acquisitions which are totally unrelated to its present activities in order to gain an undue advantage during the applicable divestiture period, or for any other purpose inconsistent with the intent and purpose of the act.

EXEMPTIONS FOR CERTAIN COMPANIES

As has been previously noted, the decision to remove the one-bank holding company exemption is being taken as a necessary step to prevent possible future abuses and is not being taken on the basis that abuses have occurred in the past. Accordingly, as discussed, the committee adopted a grandfather date designed to allow companies existing prior to that date to continue to retain the subsidiaries and engage in the activities they held or in which they were engaged on that date. The committee is aware, however, of the existence of two other types of holding companies whose hardship will not be adequately relieved by the provision dealing with a grandfather date.

The first of these types is the one-bank holding company located in small towns whose banks are small, and whose nonbanking activities are generally limited to one or two other types of businesses. The committee believes that the possibility of abuse of the purposes of the act by such companies is remote. Accordingly, the committee adopted a provision which would exempt from the prohibitions against nonbanking activities all one-bank holding companies existing on the date of enactment of the proposed legislation, so long as the bank subsidiary does not have a net worth in excess of $3 million. These companies would be allowed to engage in other activities without regard to the prohibitions in the act, as long as the bank does not merge with another bank without the express approval of the Federal Reserve Board; increase its capital by contributions from its nonbanking subsidiaries, its nonbanking parent, or from affiliates of such parent company without prior express approval; or pay dividends in excess of its current earnings.

The second type of bank holding company not relieved by the grandfather clause is the large diversified company which is the owner of a bank as well as numerous diversified nonbanking subsidiaries. These corporations are owners of banks for a variety of reasons. Some have owned their banks for a number of years and acquired the bank to prevent its failure, or to insure that their employees had adequate banking services at their disposal. Other such companies acquired their banks on a more recent date, again for a variety of reasons. The committee is convinced that these companies have not utilized their banking subsidiaries to gain any special advantage for their nonbanking subsidiaries nor have they perpetrated any other abuses in connection with their ownership or control of a bank.

The nature of the businesses of these companies is such that they must continue to broaden their nonbanking activities and affiliations. Their growth must be directed toward those businesses and activities in which they are not engaged. Consequently, the existence of a grandfather clause offers little aid to such companies. Without some provisions in the act, they would, in fact, be required to either divest their bank or cease to expand in their nonbanking activities. Thus, in order to prevent these companies from suffering undue hardship as a result of the proposed legislation, it would be necessary to adopt a provision exempting these companies from the prohibition contained in the act against engaging in new nonbanking activities.

The committee provided that these companies are exempt from the prohibitions against nonbanking activities or subsidiaries so long as the net worth of their bank does not exceed the greater of $3 million—which was mentioned earlier—or an amount equal to 25 percent of the combined net worth of the holding company and all of its subsidiaries, or $50 million, whichever is the lesser.

In addition, the Board is given the authority to waive the $50 million limitation where it determines that such action is consistent with the purposes of the act and is necessary or appropriate to avoid undue hardship to either the bank or its parent holding company or is necessary to meet a public need for banking services that is not otherwise available.

The Board is also given the authority to terminate or modify the exemption provided in regard to the 25-percent net worth test or to $50 million maximum, if the Board determines that such action is necessary to prevent undue concentration of resources, decreased competition, conflicts of interest, or unsound banking practices.

AMENDMENT OF CRITERIA REGULATING PERMISSIBLE NONBANKING ACTIVITIES

The committee approved an amendment to section 4(c)(8) of the act which governs permissible nonbanking activities and acquisitions. This amendment includes two key changes.

First, the language of the act will be amended to allow the Federal Reserve Board greater flexibility in determining what nonbanking activities and acquisitions are to be permitted bank holding companies.

Second, the committee adopted an amendment which, when enacted, will for the first time require that a proposed "functionally related" nonbanking activity of a bank holding company must "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased competition, conflicts of interest, or unsound banking practices."

The present law contains a requirement that such activity be of a "financial, fiduciary, or insurance nature." This language would appear to cover all properly related nonbanking activities, without permitting banks to encroach on commerce generally. However, a narrow interpretation was placed on this language shortly after its passage in 1956. In effect, "the business of banking" was interpreted not to refer to the general business of banking itself but to refer instead to the business of the particular banks within the particular bank holding company structure being considered.

The interpretations of this provision seems to require a "direct and significant connection" between the acquired activities and the activities of a particular bank.

The practical effect of these interpretations has been largely to confine permissible holding company activities to those activities engaged in by the banking subsidiaries of the holding company itself. This has, in many cases, prevented the holding companies from offering new services to new customers. In some instances, it may have served to inhibit competition.

The committee agrees with FDIC Chairman Frank Wille when he stated:

> Inasmuch as the economy and its financial requirements are constantly changing, the Corporation considers it essential that banks and bank holding companies have the flexibility to engage in new types of bank-related activities that may be needed now and in the future if the financial needs of the people are to be met efficiently, competitively, and at reasonable cost. Likely changes in technology, the nature of financial competition and the economic and legal functions of commercial banking all lead to a conclusion that retaining such flexibility is the wise course for the future.

A change permitting such flexibility was strongly recommended by the Federal Reserve Board, the Department of the Treasury, the Department of Justice, the Federal Deposit Insurance Corporation, and the Comptroller of the Currency.

Federal Reserve Board Chairman Dr. Arthur Burns, who suggested the specific language adopted by the committee, noted that "combining banks with functionally related businesses in a holding company system may lead to economies in production, distribution, sales, research, and finance. Economies of production can be achieved where there is a similarity of operation, such as servicing checking accounts and processing payrolls."

Assistant Attorney General Richard W. McLaren was particularly concerned that legislation be enacted which balanced the objectives of allowing the necessary flexibility to bank holding companies and insuring against possible anticompetitive effects resulting from the activities of such holding companies. He testified:

> Banking is not a static form of activity. Modern bankers are offering a variety of specialized services which would have been entirely unknown to their predecessors of a few generations ago. * * * Innovation in financial fields should be encouraged. It seems particularly desirable to permit banks to enter other financial markets when competition is weak, or where banks can be expected to offer real efficiencies.
>
> What is required, therefore, is legislation that will provide a mechanism for allowing bank expansion in areas where it is desirable, minimizing the risks to our competitive system. * * *

STANDING FOR PARTIES IN INTEREST

The Federal Reserve Board has recently ruled that a potential competitor of a bank holding company seeking to engage in nonbanking activities may appear before the Board and participate in the proceedings having to do with the application of such bank holding company. It is not clear, however, what the position of such potential competitor will be in the event of an appeal to the court of appeals under section 9 of the act. The committee believes that such a potential competitor should be entitled to participate in the hearings held by the Federal Reserve Board and should also be entitled, where necessary, to take an appeal as an aggrieved party to the court of appeals under section 9 of the act. Accordingly the committee approved a provision which states that "a party who would become a competitor of the applicant or subsidiary thereof by virtue of the applicant's or its subsidiary's entry into that business, shall be a party in interest in such proceeding and, in the event of an adverse order of the Board, shall have the right as an aggrieved party to obtain judicial review thereof as provided in section 9."

TYING ARRANGEMENTS INVOLVING BANKS

During its deliberations, the committee was concerned that there be adequate safeguards against the possibility of misuse of the economic power of a bank. The committee is aware that such misuse of economic power is possible regardless of the size of the bank, and regardless of whether the bank is affiliated with a bank holding company. Thus, in providing such safeguards, the committee felt it desirable to make them equally applicable to all banks regardless of the presence or absence of an affiliation with a bank holding company.

The provision approved by the committee is intended to provide specific

statutory assurance that the use of the economic power of a bank will not lead to a lessening of competition or unfair competitive practices. Thus, the provision is intended to affirm in statutory language the principles of fair competition. The committee does not intend, however, that this provision interfere with the conduct of appropriate traditional banking practices.

The purpose of this provision is to prohibit anticompetitive practices which require bank customers to accept or provide some other service or product or refrain from dealing with other parties in order to obtain the bank product or service they desire.

The provision authorized the Federal Reserve Board, by regulation or order, to permit such exceptions to the prohibitions of the section as the Board considers will not be contrary to its purposes and the committee expects that by such regulation or order the Board will continue to allow appropriate traditional banking practices.

This will enable the customer to continue to negotiate with the bank on the basis of his entire relationship with the bank. For example, where the customer uses multiple banking services such as deposit, loan, fiduciary, and commercial accounts or facilities, the parties may be free to fix or vary the consideration for any services upon the existence or extent of utilization of such banking services. Similarly, the language is not intended to affect bank correspondent relationships, but insures that traditional correspondent relationships cannot be perverted by being tied to or conditioned upon maintenance or establishment of relationships with nonbank subsidiaries of bank holding companies, or with businesses operated within the bank or by the people controlling a bank. Also, the language is not intended to prevent such traditional banking practices which protect extensions of credit by agreement to restrict other borrowing, but insures that such agreement may not be tied to or conditioned upon an agreement not to do business with competitors of other subsidiaries of the bank holding company, the bank, or of the operators of the bank.

It should be noted that an individual is included within the meaning of a bank holding company for the purposes of this section if he possesses the requisite ownership or control of a bank. Enforcement of this section is a responsibility of the U.S. attorneys under the direction of the Attorney General, and private parties are given the right to sue for injunctive relief as well as treble damages when they have sustained damages, or are threatened by loss or damage, by reason of a violation of this section's prohibitions. The committee intends these private rights of action to be a valuable supplement to the enforcement efforts of the U.S. attorneys.

This bill would also provide for the minting of 150 million 40 percent silver dollars bearing the likeness of Dwight David Eisenhower. These coins will be minted only as uncirculated coins and proof coins and will be sold at premium prices.

There is also a provision in the bill which authorizes the transfer of approximately 3 million rare silver dollars now held by the Treasury to the Administrator of General Services for sale to the public.

The question of an Eisenhower coin has been a matter that has been pending before the Congress for some time. I hope that we can now get a resolution of this matter by the passage of this bill.

PROGRAM

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that not later than 5 o'clock tomorrow afternoon, at the time the unfinished business is to be laid temporarily aside under the previous order, the Senate then proceed to the consideration of Calendar No. 1094, which has already been laid before the Senate by the distinguished majority leader this evening, and that it then be made the pending business.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, the Senate should be on notice again that it is very likely that action will be resumed on Calendar No. 1094, the Bank Holding Company Act, earlier than 5 o'clock tomorrow afternoon; and it is the intention of the leadership on both sides—if there is a lag in debate or if there is a hiatus in regard to the unfinished business, Senate Joint Resolution 1—in the interest of expediting the business of the Senate and the business of the people, it is the intention of the leadership to move promptly to the consideration of Calendar No. 1094 prior to 5 o'clock in the afternoon.

Mr. SPARKMAN. Mr. President, will the Senator yield?

Mr. BYRD of West Virginia. I yield.

Mr. SPARKMAN. I am glad the distinguished Senator made that statement. I just want to say that we who are concerned in handling the bill will be ready at any time, and the earlier we get on it the better we will like it, because there is a good deal of time involved in the amendments and on the bill. So the earlier we get on it, the sooner we will finish it.

Mr. BYRD of West Virginia. Yes. I may say, in addition, that, according to the schedule that was promulgated by the leadership a few days ago, the Senate is to complete action on the one bank holding company bill tomorrow. It is my further understanding that the manpower training bill will be laid before the Senate tomorrow evening after completion of action on Calendar No. 1094, H.R. 6778.

ADJOURNMENT TO 9:30 A.M.

Mr. BYRD of West Virginia. Mr. President, if there be no further business to come before the Senate, I move in accordance with the previous order, that the Senate stand in adjournment until 9:30 a.m. tomorrow.

The motion was agreed to; and (at 9 o'clock and 31 minutes p.m.) the Senate adjourned until tomorrow, Wednesday, September 16, 1970, at 9:30 a.m.

NOMINATIONS

Executive nominations received by the Senate September 15, 1970:

DIPLOMATIC AND FOREIGN SERVICE

William M. Rountree, of Florida, a Foreign Service officer of the class of career minister, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Brazil.

U.S. PATENT OFFICE

The following-named persons to be Examiners in Chief, U.S. Patent Office:

Fred C. Mattern, Jr., of Virginia, vice Nogi A. Asp, resigned.

John H. Schneider, of Virginia, vice Peter T. Dracopoulos, resigned.

Saul I. Serota, of Maryland, vice Pasquale J. Federico, resigned.

DISTRICT OF COLUMBIA PUBLIC SERVICE COMMISSION

Jeremiah Colwell Waterman, of the District of Columbia, to be a member of the Public Service Commission of the District of Columbia for a term of 3 years expiring June 30, 1973, vice William L. Porter, term expired.

OFFICE OF ECONOMIC OPPORTUNITY

Carol M. Khosrovi, of Virginia, to be an Assistant Director of the Office of Economic Opportunity, vice William H. Crook.

FEDERAL METAL AND NONMETALLIC MINE SAFETY BOARD OF REVIEW

The following-named persons to be members of the Federal Metal and Nonmetallic Mine Safety Board of Review as indicated; new positions.

Robert N. Stewart, of Indiana, for the remainder of the term of 5 years expiring September 15, 1971.

Hugh C. Matlock, of Colorado, for the remainder of the term of 5 years expiring September 15, 1972.

Donald E. Pierce, of Idaho, for the remainder of the term of 5 years expiring September 15, 1973.

Kenneth C. Kellar, of South Dakota, for the remainder of the term of 5 years expiring September 15, 1974.

Howard L. Hartman, of California, for the term of 5 years expiring September 15, 1975.

CONFIRMATIONS

Executive nominations confirmed by the Senate September 15, 1970:

UNITED NATIONS REPRESENTATIVES

The following-named persons to be representatives of the United States of America to the 25th session of the General Assembly of the United Nations:

Charles W. Yost, of New York.

Christopher H. Phillips, of New York.

JACOB K. JAVITS, U.S. Senator from the State of New York.

CLAIBORNE PELL, U.S. Senator from the State of Rhode Island.

Glenn A. Olds, of New York.

The following-named persons to be alternate representatives of the United States of America to the 25th session of the General Assembly of the United Nations:

Seymour M. Finger, of New York.

Helen G. Edmonds, of North Carolina.

Richard H. Gimer, of Virginia.

Aloysius A. Mazewski, of Illinois.

HOUSE OF REPRESENTATIVES—*Tuesday, September 15, 1970*

The House met at 12 o'clock noon, and was called to order by the Speaker pro tempore, Mr. ALBERT.

DESIGNATION OF SPEAKER PRO TEMPORE

The SPEAKER pro tempore laid before the House the following communication from the Speaker:

SEPTEMBER 15, 1970.

I hereby designate the Honorable CARL ALBERT of Oklahoma to act as Speaker pro tempore today.

JOHN W. MCCORMACK.

PRAYER

Rev. Msgr. Joseph A. Dooling, archdiocesan director, Mount Carmel Guild, Newark, N.J., offered the following prayer:

With Your divine guidance and under Your inspiration, we invoke Your blessing, O God, upon all those who share in Your divine task to conserve the world and its creatures.

You have shared with all creation Your divine power to continue the work of Your hand. To some, more of this than to others. But to all, with this power You have given proportionate responsibility, to recognize Your divine will for life and conduct—to maintain and preserve the relationship of creature to Creator. You have even shown us the secrets of Your divine power and intelligence. You have entrusted to those for whom it is our privilege to pray today—the structure of Your law in the conduct of man's relationship to You and his fellow man.

From the first moment of creation until its very end—law and order—will be the prime force for every good—and all good—even if this life ceases when You—our God—are forgotten as our first beginning and our last end.

In all sharing, God's power becomes man's power—and like God, man can rule the present and future destiny of his fellow man.

Bless these chosen ones, then, with Your special inspiration, O God—for law is the hinge upon which man's life turns.

Let us always be mindful that liberty and justice for all, under God—preserves His divine will—the rights of the individual and our Nation breathes in all its glory. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House, by Mr. Leonard, one of his secretaries, who also informed the House that on the following dates the President approved and signed bills of the House of the following titles:

On August 11, 1970:

H.R. 914. An act for the relief of Hood River County, Oreg.; and

H.R. 14619. An act for the relief of S. Sgt. Lawrence F. Payne, U.S. Army (retired).

On August 12, 1970:

H.R. 15733. An act to amend the Railroad Retirement Act of 1937 to provide a temporary 15-percent increase in annuities, to change for a temporary period the method of computing interest on investments of the railroad retirement accounts, and for other purposes; and

H.R. 17070. An act to improve and modernize the postal service, to reorganize the Post Office Department, and for other purposes.

On August 14, 1970:

H.R. 1453. An act for the relief of Capt. Melvin A. Kaye;

H.R. 1697. An act for the relief of Jack Brown;

H.R. 2209. An act for the relief of Carlos DeMarco;

H.R. 2407. An act for the relief of Elbert C. Moore;

H.R. 5337. An act for the relief of the late Albert E. Jameson, Jr.;

H.R. 6375. An act for the relief of Amalia P. Montero;

H.R. 6850. An act for the relief of Maj. Clyde Nichols (retired);

H.R. 9092. An act for the relief of Thomas J. Condon;

H.R. 12176. An act for the relief of Bly D. Dickson, Jr.; and

H.R. 15354. An act for the relief of Anthony P. Miller, Inc.

On August 17, 1970:

H.R. 1703. An act for the relief of the Clayton County Journal and Wilber Harris;

H.R. 1728. An act for the relief of Capt. Norman W. Stanley;

H.R. 2241. An act for the relief of John T. Anderson;

H.R. 2458. An act for the relief of Frank J. Enright;

H.R. 2481. An act for the relief of Cmdr. John W. McCord;

H.R. 2950. An act for the relief of Edwin E. Fulk;

H.R. 3558. An act for the relief of Thomas A. Smith;

H.R. 3723. An act for the relief of Robert G. Smith;

H.R. 6377. An act for the relief of Lt. Col. Earl Spofford Brown, U.S. Army Reserve (retired);

H.R. 9591. An act for the relief of Elgie L. Tabor;

H.R. 10662. An act for the relief of Walter L. Parker;

H.R. 11890. An act for the relief of T. Sgt. Peter Elias Gianutsos, U.S. Air Force (retired);

H.R. 12622. An act for the relief of Russell L. Chandler;

H.R. 12887. An act for the relief of John A. Avdeef; and

H.R. 15118. An act to provide for the striking of medals in commemoration of the 100th anniversary of the founding of Ohio Northern University.

On August 18, 1970:

H.R. 14114. An act to improve the administration of the national park system by the Secretary of the Interior, and to clarify the authorities applicable to the system, and for other purposes; and

H.R. 16915. An act making appropriations for the legislative branch for the fiscal year ending June 30, 1971, and for other purposes.

On August 20, 1970:

H.R. 17711. An act to amend the District of Columbia Cooperative Association Act, and for other purposes.

On August 24, 1970:

H.R. 12446. An act to confer U.S. citizenship posthumously upon Jose Guadalupe Esparza-Montoya;

H.R. 13997. An act to confer U.S. citizenship posthumously upon S. Sgt. Ryuzo Somma;

H.R. 14956. An act to extend for 3 years the period during which certain dyeing and tanning materials may be imported free of duty; and

H.R. 15866. An act to repeal the act of August 25, 1959, with respect to the final disposition of the affairs of the Choctaw Tribe.

On August 28, 1970:

H.R. 5655. An act for the relief of Low Yin (also known as Low Ying);

H.R. 12400. An act for the relief of Tae Pung Hills;

H.R. 13265. An act to confer U.S. citizenship posthumously upon L.Cpl. Frank J. Krec;

H.R. 13895. An act for the relief of Mrs. Maria Eloisa Pardo Hall;

H.R. 13971. An act granting the consent of Congress to the Falls of the Ohio Interstate Park compact; and

H.R. 15381. An act to amend the District of Columbia Income and Franchise Tax Act of 1947 with respect to the taxation of regulated investment companies.

On September 1, 1970:

H.J. Res. 1194. Joint resolution to authorize the President to designate the period beginning September 20, 1970, and ending September 26, 1970, as "National Machine Tool Week."

H.R. 1749. An act for the relief of Eagle Lake Timber Co., a partnership, of Susanville, Calif.;

H.R. 2849. An act for the relief of Anan Eldredge;

H.R. 6265. An act to provide that a headstone or marker be furnished at Government expense for the unmarked grave of any Medal of Honor recipient;

H.R. 8662. An act to authorize command of the U.S. ship *Constitution* (IX-21) by retired officers of the U.S. Navy;

H.R. 9052. An act to amend section 716 of title 10, United States Code, to authorize the interservice transfers of officers of the Coast Guard;

H.R. 12959. An act for the relief of Gloria Jara Haase;

H.R. 13195. An act to amend title 10 of the United States Code to provide that U.S. flags may be presented to parents of deceased servicemen;

H.R. 13383. An act for the relief of Mrs. Marcella Coslovich Fabretto;

H.R. 13712. An act for the relief of Vincenzo Pellicano; and

H.R. 15374. An act to amend section 355 of the Revised Statutes, as amended, concerning approval by the Attorney General of the title to lands acquired for or on behalf of the United States, and for other purposes.

On September 8, 1970:

H.R. 15351. An act to authorize additional funds for the operation of the Franklin Delano Roosevelt Memorial Commission; and

H.R. 17133. An act to extend the provisions of title XIII of the Federal Aviation Act of 1958, as amended, relating to war risk insurance.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Arrington, one of its clerks, announced that the Senate agrees to the amend-

ments of the House to the Senate amendments to bills of the Senate of the following titles:

S. 203. An act to amend the act of June 13, 1962 (76 Stat. 96), with respect to the Navajo Indian irrigation project;

S. 434. An act to reauthorize the Riverton extension unit, Missouri River Basin project, to include therein the entire Riverton Federal reclamation project, and for other purposes;

S. 2808. An act to authorize the Secretary of the Interior to construct, operate, and maintain the Minot extension of the Garrison diversion unit of the Missouri River Basin project in North Dakota, and for other purposes; and

S. 2882. An act to amend Public Law 394, 84th Congress, to authorize the construction of supplemental irrigation facilities for the Yuma Mesa Irrigation District, Arizona.

The message also announced that the Senate insists upon its amendments to the bill (H.R. 11833) entitled "An act to amend the Solid Waste Disposal Act in order to provide financial assistance for the construction of solid waste disposal facilities, to improve research programs pursuant to such act, and for other purposes," disagreed to by the House; agrees to the conference asked by the House on the disagreeing votes of the two Houses thereon, and appoints Mr. RANDOLPH, Mr. MUSKIE, Mr. EAGLETON, Mr. BOGGS, and Mr. BAKER to be the conferees on the part of the Senate.

The message also announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 3418. An act to amend the Public Health Service Act to provide for the making of grants to medical schools and hospitals to assist them in establishing special departments and programs in the field of family practice, and otherwise to encourage and promote the training of medical and paramedical personnel in the field of family medicine, and to alleviate the effects of malnutrition, and to provide for the establishment of a National Information and Resource Center for the Handicapped.

MONSIGNOR DOOLING IS GUEST CHAPLAIN OF HOUSE

(Mr. RODINO asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. RODINO. Mr. Speaker, it is my warm privilege to welcome Msgr. Joseph A. Dooling as guest Chaplain of the House of Representatives today, not only as a constituent, but as my dear friend.

As archdiocesan director of Mount Carmel Guild, a comprehensive social science agency in Essex County, Monsignor Dooling has been the guiding light of numerous essential community-help programs.

Preschool and community mental health programs, housing, public health, rehabilitation and training programs and senior citizen services have all been furthered by the vision of this selfless and humane man.

Monsignor Dooling is no stranger to the people of New Jersey and to people everywhere who have felt the compassionate services of his good work. His example will always live on in the hearts and minds of those who have known and have had the privilege, as I have had, to work closely with him. He is indeed a man I am proud to call my friend.

REQUEST FOR PERMISSION FOR SUBCOMMITTEE ON ROADS OF THE HOUSE COMMITTEE ON PUBLIC WORKS TO SIT DURING GENERAL DEBATE TODAY

Mr. DORN. Mr. Speaker, I ask unanimous consent that the Subcommittee on Roads of the House Committee on Public Works be permitted to sit this afternoon during general debate.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from South Carolina?

Mr. HALL. Mr. Speaker, I object.

The SPEAKER pro tempore. Objection is heard.

APPOINTMENT OF CONFEREES ON H.R. 18127 MAKING APPROPRIATIONS FOR PUBLIC WORKS

Mr. EVINS of Tennessee. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 18127) making appropriations for Public Works for water, pollution control, and power development and the Atomic Energy Commission for the fiscal year ending June 30, 1971, and for other purposes, with Senate amendments thereto, disagree to the Senate amendments, and agree to the conference requested by the Senate.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Tennessee? The Chair hears none, and appoints the following conferees: Messrs. EVINS of Tennessee, BOLAND, WHITTEN, ANDREWS of Alabama, MAHON, RHODES, DAVIS of Wisconsin, ROBISON, and BOW.

THE LATE C. A. "BOB" SELLERS, EDITOR OF THE FORT WORTH PRESS

(Mr. WRIGHT asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WRIGHT. Mr. Speaker, Texas and the Nation have lost a distinguished and dedicated newspaperman.

C. A. "Bob" Sellers, editor of the Fort Worth Press, unexpectedly was stricken by a heart attack and died at his home yesterday. Funeral services are being held today, in Meadowbrook Baptist Church in Fort Worth.

Bob's death is a grievous loss to all of us. His leadership will be sorely missed in Fort Worth, and particularly at the helm of the Press.

There was more than just an ordinary editor-newspaper relationship between Bob Sellers and the Press. His whole professional life was dedicated to his newspaper, and he worked unceasingly for its continuing betterment.

He joined the Press just 2 days after his graduation from Baylor University in 1945 and had served in virtually every editorial position on the paper—city hall reporter, assistant city editor, telegraph editor, public service director, and managing editor. In April 1969, at the age of 45, he was named editor.

Bob was born in Yoakum, Tex., but lived most of his life in Fort Worth. In World War II he served in the Army's 86th Division in both Europe and the Pacific.

A journalist of talent and initiative, he had won four first places in news competitions conducted by Sigma Delta Chi, and was a past president of the Fort Worth chapter of the organization. He also was a past president of the Texas United Press International Editors Association.

He was a past member of the Board of Directors of the Fort Worth Chamber of Commerce and of the Tarrant County Red Cross. He was a deacon in the Meadowbrook Baptist Church.

Surviving are his wife, Maudine, and three sons, and a daughter.

MORE FREEDOM IN THE HOUSE GALLERIES

(Mr. HECHLER of West Virginia asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HECHLER of West Virginia. Mr. Speaker, it is against the rules for anyone in the public gallery who is interested in the debates to open a copy of the pictorial directory of the Congress in order to ascertain who is addressing the House. Many of our constituents who are, I am sure, interested in the debates and courteous in their attitude toward the House have been reprimanded for violating the rules when they opened a copy of the bill merely to see what the House is debating. These restrictions are not written into the actual rules of the House but are printed on the back of the visitor's pass to the public galleries with the introductory remarks:

To help make your visit more pleasant, please observe the following rules—no reading or writing in the galleries.

It is for this reason, Mr. Speaker, that at the appropriate point in the consideration of the Legislatvie Reorganization Act I intend to offer an amendment which will allow reading and writing in the galleries under such regulations as the Speaker may prescribe.

REDUCTION OF PRIME INTEREST RATE

(Mr. PATMAN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. PATMAN. Mr. Speaker, I am sending the president of the Bank of America a telegram asking that the Bank of America join the parade in the reduction of interest rates by reducing their prime interest rate to 6 percent.

Mr. Speaker, the telegram is as follows:

SEPTEMBER 15, 1970.

HON. A. W. CLAUSEN,
President, Bank of America,
San Francisco, Calif.:

Last week, I urged your colleague, David Rockefeller of Chase Manhattan National

Bank to take the lead in a badly-needed reduction in the prime lending rate. Public comments by Chase Manhattan officials indicate that bank's reluctance to reduce interest rates and it appears that the leadership must come from other areas of the banking industry. Therefore, I am calling on you as the chief executive officer of the world's largest commercial bank to fill this leadership void and institute an immediate reduction in the prime rate. The public interest demands a reduction to at least 6%.

In contrast to the staid Wall Street institutions, Bank of America has led the way to many innovations in the banking industry and I hope that you will see fit to make banking history through the largest prime rate reduction ever.

WRIGHT PATMAN.

VITAL LEGISLATION STILL PENDING IN CONGRESS

(Mr. RHODES asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. RHODES. Mr. Speaker, in my opinion the President in his message last Friday was correct and on target in pointing out that there is a large backlog of vital legislation on which the Congress has not acted.

I am particularly concerned with the fate of the Revenue Sharing Act of 1969 which the President mentioned in his call for cooperation, calling that legislation "elemental economics, elemental good sense, elemental good government."

The concept of the Federal Government sharing income tax revenues with the States was endorsed by both parties in their 1968 platforms, it has received widespread support from the Nation's Governors and mayors and the public.

Given these facts, it is all the more puzzling why there has been no congressional action on this legislation. The bill was sent up by the President last October but neither the House nor the Senate has yet held hearings.

Mr. Speaker, I understand that the Congress has many pressing matters to deal with but as long as we continue to postpone action on such vital reforms as the Revenue Sharing Act we are justifiably open to charges of neglect and foot dragging.

PROPOSED NATIONAL COMMISSION ON FUELS AND ENERGY

(Mr. ROTH asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. ROTH. Mr. Speaker, on July 21, 1970, I introduced H.R. 18569, a bill which would establish a 21-member National Commission on Fuels and Energy. This bill is a companion bill to S. 4092, which had been introduced earlier in the Senate and which, I understand, enjoys the cosponsorship of over half the Members of the Senate.

Last Thursday and Friday the Senate Interior Committee's Subcommittee on Minerals, Materials, and Fuels held hearings on the Senate version of this bill. Those hearings have now been recessed subject to the call of the chair.

Although I have not had the opportunity to review all the testimony taken at the Senate hearings, I understand that there was general agreement among the witnesses that we are facing an energy crisis of unprecedented proportions and that we had better begin soon to give serious consideration to setting up the mechanism for establishing a coordinated national energy and fuels policy.

It is not anticipated that such a commission could in itself eliminate all shortages of fuel and energy which we may encounter in the next two decades, but it would, through its investigation and study of the energy requirements and fuel resources and policies of the United States, be in a position to recommend to the President and the Congress, first, what the national fuel and energy needs will be during the next 20 years, and, second, how they can be supplied while protecting our environment.

It is not too late for the Congress to consider this proposal before the end of the present session, and I urge the Interstate and Foreign Commerce Committee to consider scheduling hearings on this legislation as soon as possible.

FOREIGN ASSISTANCE FOR THE 'SEVENTIES—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. 91-385)

The SPEAKER pro tempore (Mr. ALBERT) laid before the House the following message from the President of the United States which was read, and, without objection referred to the Committee on Foreign Affairs and ordered to be printed:

To the Congress of the United States:

FOREIGN ASSISTANCE FOR THE 'SEVENTIES

Today, I am proposing a major transformation in our foreign assistance programs.

For more than two decades these programs have been guided by a vision of international responsibilities conditioned by the aftermath of World War II and the emergence of new nations. But the world has been changing dramatically; by the end of the 'Sixties, there was widespread agreement that our programs for foreign assistance had not kept up with these changes and were losing their effectiveness. This sentiment has been reflected in declining foreign aid levels.

The cause of this downward drift is not that the need for aid has diminished; nor is it that our capacity to help other nations has diminished; nor has America lost her humanitarian zeal; nor have we turned inward and abandoned our pursuit of peace and freedom in the world.

The answer is not to stop foreign aid or to slash it further. The answer is to reform our foreign assistance programs and do our share to meet the needs of the 'Seventies.

A searching reexamination has clearly been in order and, as part of the new Administration's review of policy, I was determined to undertake a fresh appraisal. I have now completed that appraisal and in this message I am proposing a set of fundamental and sweeping reforms to overhaul completely our entire foreign assistance operation to make it fit a new foreign policy.

Such a major transformation cannot be accomplished overnight. The scope and complexity of such an undertaking requires a deliberate and thoughtful approach over many months. I look forward to active discussion of these proposals with the Congress before I transmit my new assistance legislation next year.

Reform #1: I propose to create separate organizational arrangements for each component of our assistance effort: security assistance, humanitarian assistance, and development assistance. This is necessary to enable us to fix responsibility more clearly, and to assess the success of each program in achieving its specific objectives. My proposal will overcome the confusion inherent in our present approach which lumps together these separate objectives in composite programs.

Reform #2: To provide effective support for the Nixon Doctrine, I shall propose a freshly conceived International Security Assistance Program. The prime objective of this program will be to help other countries assume the responsibility of their own defense and thus help us reduce our presence abroad.

Reform #3: I proposed that the foundation for our development assistance programs be a new partnership among nations in pursuit of a truly international development effort based upon a strengthened leadership role for multilateral development institutions. To further this objective,

—The U.S. should channel an increasing share of its development assistance through the multilateral institutions as rapidly as practicable.

—Our remaining bilateral assistance should be provided largely within a framework established by the international institutions.

—Depending upon the success of this approach, I expect that we shall eventually be able to channel most of our development assistance through these institutions.

Reform #4: To enable us to provide effective bilateral development assistance in the changed conditions of the 'Seventies, I shall transmit legislation to create two new and independent institutions:

—A U.S. International Development Corporation, to bring vitality and innovation to our bilateral lending activities and enable us to deal with lower income nations on a business-like basis.

—A U.S. International Development Institute to bring the genius of U.S. science and technology to bear on the problems of development, to help build research and training competence in the lower income countries themselves, and to offer cooperation in international efforts dealing with such problems as population and employment.

Their creation will enable us to phase out the Agency for International Devel-

opment and to reduce significantly the number of overseas U.S. Government personnel working on development programs.

Reform #5: To add a new dimension to the international aid effort insuring a more permanent and enduring source of funds for the low income countries, I have recently proposed that all nations enter into a treaty which would permit the utilization of the vast resources of the seabeds to promote economic development.

Reform #6: I propose that we redirect our other policies which bear on development to assure that they reinforce the new approach outlined in this message. Our goal will be to expand and enhance the contribution to development of trade and private investment, and to increase the effectiveness of government programs in promoting the development process. A number of changes are necessary:

—I propose that we move promptly toward initiation of a system of tariff preferences for the exports of manufactured products of the lower income countries in the markets of all the industrialized countries.

—I am ordering the elimination of those tying restrictions on procurement which hinder our investment guarantee program in its support of U.S. private investment in the lower income countries.

—I propose that all donor countries take steps to end the requirement that foreign aid be used to purchase goods and services produced in the nation providing the aid. Complete untying of aid is a step that must be taken in concert with other nations; we have already begun discussions with them toward that end. As an initial step, I have directed that our own aid be immediately untied for procurement in the lower income countries themselves.

THE FOUNDATIONS OF REFORM

These are the most fundamental of the many far-reaching reforms I propose today. To understand the need for them now, and to place them in perspective, it is important to review here the way in which we have reexamined our policies in light of today's requirements.

Two steps were necessary to develop a coherent and constructive U.S. assistance program for the Seventies:

—As a foundation, we needed a foreign policy tailored to the 1970's to provide direction for our various programs. For that, we developed and reported to the Congress in February the New Strategy for Peace.

—Second, to assist me in responding to the Congress and to get the widest possible range of advice on how foreign assistance could be geared to that strategy, I appoint a distinguished group of private U.S. citizens to make a completely independent assessment of what we should be trying to achieve with our foreign aid programs and how we should go about it.

The Task Force on International Development, chaired by Rudolph Peterson, former president of the Bank of America, drew upon the considerable experience of its own members and sought views from Members of the Congress and from every quarter of U.S. society. In early March the Task Force presented its report to me, and shortly thereafter I released it to the public. The Task Force undertook a comprehensive assessment of the conditions affecting our foreign assistance program and proposed new and creative approaches for the years ahead. Its report provides the basis for the proposals which I am making today.

I also have taken into account the valuable insights and suggestions concerning development problems which were contained in the Rockefeller Report on our Western Hemisphere policy. Many of the ideas and measures I am proposing in this message in fact were foreshadowed by a number of policy changes and program innovations which I instituted in our assistance programs in Latin America.

THE PURPOSES OF FOREIGN ASSISTANCE

There are three interrelated purposes that the U.S. should pursue through our foreign assistance program: promoting our national security by supporting the security of other nations; providing humanitarian relief; and furthering the long-run economic and social development of the lower income countries.

The national security objectives of the U.S. cannot be pursued solely through defense of our territory. They require a successful effort by other countries around the world, including a number of lower income countries, to mobilize manpower and resources to defend themselves. They require, in some cases, military bases abroad, to give us the necessary mobility to defend ourselves and to deter aggression. They sometimes require our financial support of friendly countries in exceptional situations.

Moreover, our security assistance programs must be formulated to achieve the objectives of the Nixon Doctrine, which I set forth at Guam last year. That approach calls for any country whose security is threatened to assume the primary responsibility for providing the manpower needed for its own defense. Such reliance on local initiative encourages local assumption of responsibility and thereby serves both the needs of other countries and our own national interest. In addition, the Nixon Doctrine calls for our providing assistance to such countries to help them assume these responsibilities more quickly and more effectively. The new International Security Assistance Program will be devoted largely to these objectives. I shall set forth the details of the proposed program when I transmit the necessary implementing legislation to the Congress next year.

The humanitarian concerns of the American people have traditionally led us to provide assistance to foreign countries for relief from natural disasters, to help with child care and maternal welfare, and to respond to the needs of international refugees and migrants. Our humanitarian assistance programs, limited in size but substantial in human benefits, give meaningful expression to these concerns.

Both security and humanitarian assistance serve our basic national goal: the creation of a peaceful world. This interest is also served, in a fundamental and lasting sense, by the third purpose of our foreign assistance: the building of self-reliant and productive societies in the lower income countries. Because these countries contain two-thirds of the world's population, the direction which the development of their societies takes will profoundly affect the world in which we live.

We must respond to the needs of these countries if our own country and its values are to remain secure. We are, of course, wholly responsible for solutions to our problems at home, and we can contribute only partially to solutions abroad. But foreign aid must be seen for what it is—not a burden, but an opportunity to help others to fulfill their aspirations for justice, dignity, and a better life. No more abroad than at home can peace be achieved and maintained without vigorous efforts to meet the needs of the less fortunate.

The approaches I am outlining today provide a coherent structure for foreign assistance—with a logical framework for separate but interdependent programs. With the cooperation of Congress, we must seek to identify as clearly as possible which of our purposes—security, humanitarianism, or long-term development of the lower income countries—to pursue through particular U.S. programs. This is necessary to enable us to determine how much of our resources we wish to put into each, and to assess the progress of each program toward achieving its objectives.

There is one point, however, that I cannot overemphasize. Each program is a part of the whole, and each must be sustained in order to pursue our national purpose in the world of the Seventies. It is incumbent upon us to support all component elements—or the total structure will be unworkable.

EFFECTIVE DEVELOPMENT ASSISTANCE—THE CHANGED CONDITIONS

The conditions that surround and influence development assistance to lower income countries have dramatically changed since the present programs were established. At that time the United States directly provided the major portion of the world's development assistance. This situation led to a large and ambitious U.S. involvement in the policies and activities of the developing countries and required extensive overseas missions to advise governments and monitor programs. Since then the international assistance environment has changed:

First, the lower income countries have made impressive progress, as highlighted by the Commission on International Development chaired by Lester Pearson, the former Prime Minister of Canada. They have been helped by us and by others, but their achievements have come largely through their own efforts. Many have scored agricultural breakthroughs which have dramatically turned the fear

of famine into the hope of harvest. They have made vast gains in educating their children and improving their standards of health. The magnitude of their achievement is indicated by the fact that the lower income countries taken together exceeded the economic growth targets of the First United Nations Development Decade. These achievements have brought a new confidence and self-reliance to people in communities throughout the world.

With the experience that the lower income countries have gained in mobilizing their resources and setting their own development priorities, they now can stand at the center of the international development process—as they should, since the security and development which is sought is theirs. They clearly want to do so. Any assistance effort that fails to recognize these realities cannot succeed.

Second, other industrialized nations can now afford to provide major assistance to the lower income countries, and most are already doing so in steadily rising amounts.

While the United States remains the largest single contributor to international development, the other industrialized nations combined now more than match our efforts. Cooperation among the industrialized nations is essential to successful support for the aspirations of the lower income countries. New initiatives in such areas as trade liberalization and untying of aid must be carried out together by all such countries.

Third, international development institutions—the World Bank group, the Inter-American Development Bank and other regional development organizations, the United Nations Development Program, and other international agencies—now possess a capability to blend the initiatives of the lower income countries and the responses of the industrialized nations. They have made effective use of the resources which we and others have provided. A truly international donor community is emerging, with accepted rules and procedures for responding to the initiatives of the lower income countries. The international institutions are now in a position to accelerate further a truly international development effort.

Fourth, the progress made by lower income countries has brought them a new capability to sell abroad, to borrow from private sources, and to utilize private investment efficiently. As a result, a fully effective development effort should encompass much more than government assistance programs if it is to make its full potential contribution to the well-being of the people of the developing nations. We have come to value the constructive role that the private sector can play in channeling productive investments that will stimulate growth. We now understand the critical importance of enlightened trade policies that take account of the special needs of the developing countries in providing access for their exports to the industrialized nations.

EFFECTIVE DEVELOPMENT ASSISTANCE—THE PROGRAM FOR REFORM

To meet these changed international conditions, I propose a program for reform in three key areas: to support an expanded role for the international assistance institutions; to reshape our bilateral programs; and to harness all assistance-related policies to improve the effectiveness of our total development effort.

My program for reform is a reaffirmation of the commitment of the United States to support the international development process, and I urge the Congress to join me in fulfilling that commitment. We want to help other countries raise their standards of living. We want to use our aid where it can make a difference. To achieve these goals we will respond positively to sound proposals which effectively support the programs of the lower income countries to develop their material and human resources and institutions to enable their citizens to share more fully in the benefits of worldwide technological and economic advance.

1. EXPANDING THE ROLE OF INTERNATIONAL INSTITUTIONS

International institutions can and should play a major creative role both in the funding of development assistance and in providing a policy framework through which aid is provided.

Such a multilateral approach will engage the entire international community in the development effort, assuring that each country does its share and that the efforts of each become part of a systematic and effective total effort. I have full confidence that these international institutions have the capability to carry out their expanding responsibilities.

—I propose that the United States channel an increasing share of its development assistance through multilateral institutions as rapidly as practicable.

We have already taken the first steps in this direction. The Congress is currently considering my proposals for a $1.8 billion multi-year U.S. contribution to the Inter-American Development Bank and a $100 million contribution over three years to the Asian Development Bank. These two requests together with authorizations for increases in our subscriptions to the World Bank and International Monetary Fund are critical to our new assistance approach.

Moreover, I am pleased to note the recent statement by the World Bank that there is widespread agreement among donor countries to replenish the funds of the International Development Association at an annual rate of $800 million for the next three years, beginning in fiscal year 1972. I shall propose that the Congress, at its next session, authorize the $320 million annual U.S. share which such a replenishment would require.

—In order to promote the eventual development of a truly international system of assistance, I propose that our remaining bilateral development assistance be coordinated wherever feasible with the bilateral assistance of other donor countries, through consortia and consultative groups under the leadership of these international institutions. These institutions and groups like the CIAP in Latin America will provide leadership in the development process and work out programs and performance standards with lower income countries themselves.

Moving in this direction holds the promise of building better relations between borrowing and lending countries by reducing the political frictions that arise from reliance on bilateral contacts in the most sensitive affairs of nation-states. It will enhance the effectiveness of the world development effort by providing for a pooling of resources, knowledge, and expertise for solving development problems which no single country can muster.

2. RESHAPING OUR BILATERAL PROGRAMS

If these worldwide initiatives are to be fully effective, we must also refashion and revitalize our own institutions to assure that they are making their maximum contribution within a truly international development system. This will be neither an easy nor quickly accomplished task; it calls for thorough preparation, and an orderly transition. It is essential to undertake this task if our programs are to reflect the conditions of the 'Seventies.

The administration of bilateral assistance programs is complex and demanding. New institutions are needed so that we can directly focus on our particular objectives more effectively.

U.S. INTERNATIONAL DEVELOPMENT INSTITUTE

—I shall propose establishment of a U.S. International Development Institute, which will bring U.S. science and technology to bear on the problems of development.

The Institute will fill a major gap in the international development network. It will match our vast talents in science and technology with institutions and problems abroad. Research has created the basis for the Green Revolution—the major breakthrough in agricultural production—but continued progress in the 1970's will require the lower income countries to deal with more, and more complex, problems. The Institute will concentrate on selected areas and focus U.S. technology on critical problems. This requires flexibility, imagination and a minimum of red tape. If we can provide this Institute with the operational flexibility enjoyed by our private foundations, we can make a major contribution to the lower income countries at modest expense.

An Institute, so organized, could

—Concentrate U.S. scientific and technological talent on the problems of development.

—Help to develop research competence in the lower income countries themselves.

—Help develop institutional competence of governments to plan and manage their own development programs.

—Support expanded research programs in population.

—Help finance the programs of U.S.-sponsored schools, hospitals and other institutions abroad.
—Carry out a cooperative program of technical exchange and reimbursable technical services with those developing countries that do not require financial assistance.
—Cooperate in social development and training programs.
—Administer our technical assistance programs.
—Permit greater reliance on private organizations and researchers.

Given the long-term nature of the research operation and the need to attract top people on a career basis, the Institute should be established as a permanent Federal agency. To provide the necessary financial continuity, I propose that Congress provide it with a multi-year appropriation authorization.

U.S. INTERNATIONAL DEVELOPMENT CORPORATION

I shall propose establishment of a U.S. International Development Corporation to administer our bilateral lending program. It will enable us to deal with the developing nations on a mature and businesslike basis.

This Development Corporation will examine projects and programs in terms of their effectiveness in contributing to the international development process. It will rely strongly on the international institutions to provide the framework in which to consider individual loans and will participate in the growing number of international consortia and consultative groups which channel assistance to individual lower income countries. It should have financial stability through a multi-year appropriation authorization and authority to provide loans with differing maturities and differing interest rates, tailored to the requirements of individual borrowers. The Corporation would also have limited authority to provide grant financed technical assistance for projects closely related to its lending operations.

Both the Institute and the Corporation will be subject to normal executive and legislative review, relating their performance directly to their objectives.

Both these new institutions involve a fundamental change from our existing programs. As I have emphasized, the detailed plans and the complete transition will take time. In the interim, I am directing the administrators of our present development programs to take steps to conform these programs, as much as possible, to the new concepts and approaches I have outlined. For example, our program planning for consortia will be based more on analysis and general guidance developed in country studies prepared by the World Bank and other international institutions. Greater utilization of international institutions will permit us to reduce the number of government personnel attached to our assistance programs particularly overseas and make major changes in our present method of operation.

OVERSEAS PRIVATE INVESTMENT CORPORATION

—I am submitting to the Senate my nominations for the members of the Board of the Overseas Private Investment Corporation, which I proposed a year ago to promote the role of the private sector in development and which the Congress approved.

I expect this institution to be an important component of our new bilateral assistance program. The most important efforts of this new agency will be operation of the investment insurance and guaranty program and a strengthened program for assisting U.S. firms to undertake constructive investment in developing countries.

INTER-AMERICAN SOCIAL DEVELOPMENT INSTITUTE

—A few weeks ago I submitted to the Senate my nominations for the members of the Board of Directors of the Inter-American Social Development Institute, which was authorized by the Congress in the Foreign Assistance Act of 1969.

This Institute will provide grant support for innovative social development programs in Latin America undertaken primarily by private non-profit organizations, and will be aimed at bringing the dynamism of U.S. and Latin American private groups to bear on development problems and at broadening the participation of individuals in the development process.

The keynote of the new approach to our bilateral programs will be effectiveness: We will ask whether a program or individual loan will work before we decide to pursue it—and we will expect the international institutions through which we channel funds to do so as well. We will concentrate our activities in sectors in which we can make a significant contribution and in areas where long-term development is of special interest to the United States.

This Administration has been undertaking for some time a full review of all of our foreign economic policies. Those policies, including our new foreign aid policy and programs, must be closely related and mutually supporting. Therefore, I intend shortly to establish a new mechanism which will plan and coordinate all of our foreign economic policies, including our various foreign assistance programs, to assure that they are all effectively related.

3. PROMOTING EFFECTIVE DEVELOPMENT THROUGH IMPROVED ECONOMIC POLICIES

In addition to a new emphasis on the role of international institutions and a new shape to our bilateral programs, I propose initiatives that will enhance the public and private sector contribution to the development process.

—To open further the benefits of trade to the lower income countries, I have proposed that the international community initiate a system of tariff preferences for the exports of manufactured and selected primary products of the lower income countries in the markets of all of the industrialized countries.

The lower income countries must expand their exports to be able to afford the imports needed to promote their development efforts, and to lessen their need for concessional foreign assistance.

Market growth for most of the primary commodities which have traditionally been their major sources of export earnings is insufficient to enable them to meet these needs. I will submit legislation to the Congress recommending that we eliminate duties on a wide range of manufactured products purchased from the lower income countries. We will move ahead with this approach as soon as we achieve agreement with the other industrialized countries to join us with comparable efforts.

—I propose steps to expand the constructive role of private investment in the development process.

In order to eliminate the present tying restrictions on procurement which hinder our investment guarantee program, I am now directing that coverage under the extended risk guarantee program be extended to funds used in purchasing goods and services abroad. This will enhance our support of U.S. private investment in the lower income countries. In addition, we support early inauguration of an International Investment Insurance Agency, under the auspices of the World Bank, to provide multilateral—and thereby more effective—guarantees against expropriations and other political risks for foreign investments. We also support an increase in the scope of operations and resources of the International Finance Corporation, to further promote the role of the private sector—particularly within the lower income countries themselves—in the international development process.

—I propose that all donor countries end the requirement that foreign aid be used to purchase goods and services produced in the nation providing the aid.

Because recipients are not free to choose among competing nations, the value of the aid they receive is reduced significantly. These strings to our aid lower its purchasing power, and weaken our own objectives of promoting development. Aid with such strings can create needless political friction.

Complete untying of aid is a step that must be taken in concert with other nations and we have begun talks to that end with the other members of the Development Assistance Committee of the Organization for Economic Cooperation and Development. In the expectation that negotiations will soon be completed successfully, I have decided to permit procurement now in the lower income countries under the U.S. bilateral lending program—an expansion of the initial step I took with our Latin American neighbors. In addition to improving the quality of our assistance, this should expand trade among the lower income countries, an important objective in its own right.

—I propose that the United States place strong emphasis on what the Peterson Task Force called "the special problem of population."

The initiative in this area rests with each individual country, and ultimately with each family. But the time has come for the international community to come to grips with the world population problem with a sense of urgency. I am gratified at the progress being made by the

new United Nations Fund for Population Activities and propose that it undertake a study of world needs and possible steps to deal with them. In order to cooperate fully in support of this international effort, the proposed U.S. International Development Institute should focus the energy and expertise of this country on new and more effective measures for dealing with the problem of population.

—I also believe that the United States should work with others to deal effectively with the debt service problem.

The successful growth of the past has been financed in part through external borrowings, from private as well as government sources which the borrowers are obligated to repay. Furthermore, a portion of their borrowed resources have gone to build roads, schools and hospitals which are essential requirements of a developing nation but which do not directly generate foreign exchange. The debt incurred has heavily mortgaged the future export earnings of a number of lower income countries, restricting their ability to pay for further development.

This problem calls for responsibility on the part of the lower income countries, cooperation on the part of the lenders, and leadership by the international institutions which must take responsibility for analyzing debt problems and working closely with the creditors in arranging and carrying through measures to meet them. The United States will play its role in such a cooperative effort.

THE FUNDING OF DEVELOPMENT ASSISTANCE

International development is a long-term process. Our institutions—like the multilateral lending institutions—should have an assured source of long-term funding. Foreign assistance involves the activities of many nations and the sustained support of many programs. Sudden and drastic disruptions in the flow of aid are harmful both to our long-term development goals and to the effective administration of our programs.

In the past this country has shown its willingness and determination to provide its share. I confirm that determination and ask the Congress and the American people to assume those responsibilities which flow from our commitment to support the development process.

I agree with the conclusion of the Peterson Task Force that the downward trend of U.S. contributions to the development process should be reversed. I also agree with the Peterson Report that the level of foreign assistance "is only one side of the coin. The other side is a convincing determination that these resources can and will be used effectively."

A determination of the appropriate level of U.S. assistance in any one year will depend on a continuing assessment of the needs and performance of individual developing countries, as well as our own funding ability. It must also be influenced by a further definition of the proposals which I am outlining in this message, the responses of other donors and the performance of the international institutions.

As a long-run contribution to the funding of development, the United States will seek the utilization of revenues derived from the economic resources of the seabed for development assistance to lower income countries. I have recently proposed that all nations enter into a treaty to establish an international regime for the exploitation of these vast resources, and that royalties derived therefrom be utilized principally for providing economic assistance to developing countries participating in the treaty.

Foreign assistance has not been the specific interest of one party or the particular concern of a single Administration. Each President, since the end of World War II, has recognized the great challenges and opportunities in participating with other nations to build a better world from which we all can benefit. Members of both political parties in the Congress and individuals throughout the nation have provided their support.

The U.S. role in international development assistance reflects the vision we have of ourselves as a society and our hope for a peaceful world. Our interest in long-term development must be viewed in the context of its contribution to our own security. Economic development will not by itself guarantee the political stability which all countries seek, certainly not in the short run, but political stability is unlikely to occur without sound economic development.

The reforms that I propose today would turn our assistance programs into a far more successful investment in the future of mankind—an investment made with the combination of realism and idealism that marks the character of the American people. It will enable us to enter the 'Seventies with programs that can cope with the realities of the present and are flexible enough to respond to the needs of tomorrow. I ask the Congress and the American people to join me in making this investment.

RICHARD NIXON.

THE WHITE HOUSE, *September 15, 1970.*

FOREIGN ASSISTANCE FOR THE SEVENTIES

(Mr. GERALD R. FORD asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

Mr. GERALD R. FORD. Mr. Speaker, the President has called for substantial changes in the foreign assistance program. The new focus is to be on an increasing role for private enterprise in helping developing nations; on enlisting the peoples of these nations to help improve their own lives; and on working within the framework of multilateral organizations wherever possible.

For instance, the new framework for our development assistance would include a U.S. International Development Corporation, responsible for making loans in selected countries and for related technical assistance activities. Where possible, our loans would support broad programs worked out by the developing countries and appropriate international financial institutions.

The President has also called for a U.S. International Development Institute to apply science and technology to the process of development. The Institute would work largely through private organizations and would rely on highly skilled scientific and professional personnel.

The United States must be able to respond flexibly and effectively to changing requirements in the developing world. The President's proposals will make possible that kind of response.

Mr. ROBISON. Mr. Speaker, in his state of the Union message, as delivered to this Congress and to the Nation on January 22 of this year by the President, Mr. Nixon sounded again his theme that "if ours is not to be an age of revolution, it must be an age of reform," going on to propose that, as we entered the seventies, we should enter also a great age of reform of the institutions of American government.

Subsequently, on February 18, the President sent to Congress his historic "State of the World Message," entitled, "U.S. Foreign Policy for the 1970's—A New Strategy for Peace." This wide-ranging document was a statement of the new approach the President intended to make in foreign policy, generally—an approach designed to match what Mr. Nixon called "a new era of international relations."

In this latter message, the President declared:

America cannot live in isolation if it expects to live in peace.

Adding that—

We have no intention of withdrawing from the world . . . the only issue before us (being) how we can be most effective in meeting our responsibilities, protecting our interests, and thereby building peace.

In any such long-range effort it was clearly essential that we, as a Nation and a people, should address ourselves to the need for reform of our so-called foreign-assistance programs—an overall effort which, while not perhaps to be embraced under that earlier Presidential category of "institutions of American government," is nevertheless one of the building-blocks out of which a durable peace in a rapidly changing world will have to be constructed.

Today, then, we now have Mr. Nixon's ideas in this regard—and most welcome ideas they are, indeed.

In an era of declining foreign-aid expenditure levels—which fact expresses not only congressional and popular disenchantment with the foreign-aid programs of the past but quite likely, as well, a swelling national weariness with what many of our citizens, out of their unhappiness over Vietnam, have come to view as our tendency in recent years towards global adventurism—it is essential that we avoid carrying too far our understandable desire to turn somewhat inwards. For, whether we like it or not, we have a profound national interest in the social and economic development of the lower-income nations of the world. Our needs at home are, to be sure, most large, but our new awareness of them should not be permitted to blind us to the development needs of the world; this because, as the President notes:

No more abroad than at home can peace be achieved and maintained without vigorous efforts to *meet the needs of the less fortunate.*

The problem faced by the President in this regard has been a difficult one. Essentially, it has been a problem of finding ways and means to make our foreign assistance programs more effective at a time when, for a variety of factors—not the least of which is the current public attitude toward foreign aid in general, as that attitude is reflected here in Congress—there will doubtless be no appreciable increases in overall aid expenditures in the years immediately ahead.

In submitting his recommendations in this regard, the President has drawn heavily on the report of the Peterson Task Force on International Development, as well as on Gov. Nelson Rockefeller's report concerning our special policy problems in our own Western Hemisphere. Mr. Nixon's recommendations are simple and direct. First, he proposes that increasing amounts of our development assistance be channeled through the World Bank and other such international and regional institutions. Second, he recommends that we continue a significant program of bilateral development assistance—assistance administered by the United States, itself—but targeted now on those underdeveloped nations in which we have a special interest and which also show an ability and readiness to respond positively to the need to develop their material and human resources; in other words, to use our aid not indiscriminately as in the past but, from now on, only where it can make a difference. This involves, I know, a principle that has been stated in the past but seldom adhered to by recent Chief Executives. However, that principle is so much on all fours with the "Nixon Doctrine's" emphasis on local initiative and local assumption of responsibility—on the concept that peace requires partnership—that we must believe this is one President who means what he says in this respect.

The first such recommendation foreshadows the end of our once overlarge and overambitious involvement in the policies and activities of the growing number of developing nations, as well as the farflung overseas missions once thought necessary to administer and monitor that unique, but too often failing, effort. It foreshadows the day, not far off, when the United States will take its proper place in the emerging international donor community—as Mr. Nixon calls it—which has now the capability of better blending the initiatives of the lower income countries and the responses of the industrialized nations than we could ever hope to accomplish on our own.

The second such recommendation similarly foreshadows the day, also not far off, when those nations that will receive the benefit of our foreign aid will stand at the center of the international development effort, establishing their own priorities and receiving our assistance in relation to the efforts they are making in their own behalf. If Congress reacts favorably to the President's forthcoming legislative recommendations in this same regard, it also foreshadows a new institutional framework to replace the existing Agency for International Development, and a new emphasis on private initiative, private skills, and private resources in the developing nations, concentrating on their long-term needs and not on short-term political favors which, we should have long ago learned, cannot be bought with such assistance.

This new institutional framework, with congressional cooperation will be centered around a U.S. International Development Institute—to bring our scientific and technical capabilities to bear on the special problems of development—and a U.S. International Development Corporation responsible for making capital and related technical-assistance loans in selected countries on what the President assures us will be "a mature and businesslike basis." In order to help assure that latter objective, both of these newly proposed organizations will report directly to the President, leaving under State Department auspices those separate programs of "humanitarian assistance"—relief from natural disasters, refugee programs, and the like—and, in manner yet to be determined, under other auspices that third element of foreign assistance—collective security or "security assistance," as the President terms it—thus separating out the three major aims of our newly shaped foreign assistance program in such a way as to help fix responsibility more precisely and to clarify accountability for their conduct.

Mr. Speaker, though I shall, of course, wish to examine further the specifics of the forthcoming Presidential legislative proposals, the basics of the President's message, today, have my immediate and enthusiastic approval.

Taken together, they constitute the beginnings of true reform—giving proof where needed of the fact that declining foreign aid expenditure levels is not evidence that the need for such aid is diminished, or that our capacity to help other nations has diminished, or that America has lost, as Mr. Nixon put it, "her humanitarian zeal," nor, again in his words, that "we have turned inward and abandoned our pursuit of peace and freedom in the world."

Taken together, such proposals—including specifically, and it needed to be emphasized, Mr. Nixon's suggestion that the new International Development Institute should focus, with a sense of urgency, the energy and expertise of this country on the world's population problem—can help make our foreign-assistance programs the kind of investment in a better world, from which we can all benefit, that they have long needed to be.

GENERAL LEAVE TO EXTEND

Mr. GERALD R. FORD. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the subject of the President's message on foreign assistance for the seventies.

The SPEAKER pro tempore (Mr. ALBERT). Is there objection to the request of the genleman from Michigan?

There was no objecion.

PRIVATE CALENDAR

The SPEAKER pro tempore (Mr. ALBERT). This is Private Calendar day. The Clerk will call the first individual bill on the Private Calendar.

DR. ANTHONY S. MASTRIAN

The Clerk called the bill (H.R. 15760) for the relief of Dr. Anthony S. Mastrian.

Mr. HALL. Mr. Speaker, I ask unanimous consent that this bill be put over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Missouri?

There was no objection.

ATKINSON, HASERICK & CO., INC.

The Clerk called the bill (H.R. 10534) for the relief of Atkinson, Haserick & Co., Inc.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

CLAUDE G. HANSEN

The Clerk called the bill (H.R. 13807) for the relief of Claude G. Hansen.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Iowa?

There was no objection.

JOHN R. GOSNELL

The Clerk called the bill (H.R. 13469) for the relief of John R. Gosnell.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

DAVID L. KENNISON

The Clerk called the bill (H.R. 15272) for the relief of David L. Kennison.

Mr. HALL. Mr. Speaker, I ask unanimous consent that this bill be put over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Missouri?

There was no objection.

GEORGE F. MILLS

The Clerk called the bill (H.R. 15415) for the relief of George F. Mills.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Iowa?

There was no objection.

REFERENCE OF H.R. 17968 TO THE CHIEF COMMISSIONER OF THE COURT OF CLAIMS

The Clerk called the House Resolution (H. Res. 108) referring H.R. 1390 to the Chief Commissioner of the Court of Claims.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that this resolution be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

THOMAS J. BECK

The Clerk called the bill (H.R. 4982) for the relief of Thomas J. Beck.

Mr. HALL. Mr. Speaker, I ask unanimous consent that this bill be put over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Missouri?

There was no objection.

OK YON (MRS. CHARLES G.) KIRSCH

The Clerk called the bill (H.R. 4670) for the relief of Ok Yon (Mrs. Charles G.) Kirsch.

There being no objection, the Clerk read the bill as follows:

H.R. 4670

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Ok Yon (Mrs. Charles G.) Kirsch shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper officer to deduct one number from the total number of immigrant visas and conditional entries which are made available to natives of the country of the alien's birth under paragraphs (1) through (8) of section 203(a) of the Immigration and Nationality Act.

With the following committee amendment:

Strike out all after the enacting clause and insert in lieu thereof the following:

"That, in the administration of the Immigration and Nationality Act, Ok Yon (Mrs. Charles G.) Kirsch shall be held and considered to be an immediate relative as defined in section 201(b) of that Act and the provisions of section 204 of the said Act shall not be applicable in this case."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MAUREEN O'LEARY PIMPARE

The Clerk called the bill (H.R. 12962) for the relief of Maureen O'Leary Pimpare.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

MARIA DE CONCEICAO BOTELHO PEREIRA

The Clerk called the bill (H.R. 12990) for the relief of Maria de Conceicao Botelho Pereira.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempo. Is there objection to the request of the gentleman from Iowa?

There was no objection.

VERNON LOUIS HOBERG

The Clerk called the bill (S. 1087) for the relief of Vernon Louis Hoberg.

There being no objection, the Clerk read the bill as follows:

S. 1087

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provision of section 212 (a) (4) of the Immigration and Nationality Act, Vernon Louis Hoberg may be issued a visa and be admitted to the United States for permanent residence if he is found to be otherwise admissible under the provisions of that Act: *Provided,* That, if the said Vernon Louis Hoberg is not entitled to medical care under the Dependents' Medical Care Act (70 Stat. 250), a suitable and proper bond or undertaking, approved by the Attorney General, be deposited as prescribed by section 213 of the Immigration and Nationality Act: *Provided further,* That this exemption shall apply only to a ground for exclusion of which the Department of State or the Department of Justice had knowledge prior to the enactment of this Act.

The bill was ordered to be read a third time, was read the third time, and passed and a motion to reconsider was laid on the table.

MARGARITA ANNE MARIE BADEN (NGUYEN TAN NGA)

The Clerk called the bill (S. 2976) for the relief of Margarita Anne Marie Baden (Nguyen Tan Nga).

There being no objection, the Clerk read the bill as follows:

S. 2976

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Margarita Anne Marie Baden (Nguyen Tan Nga) may be classified as a child within the meaning of section 101 (b) (1) (F) of such Act, upon the filing of a petition in her behalf of Barbara Baden, a citizen of the United States, pursuant to section 204 of such Act. No natural brothers or sisters of the said Margarita Anne Marie Baden (Nguyen Tan Nga) shall, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

DRAGO MIKLAUSIC

The Clerk called the bill (H.R. 1508) for the relief of Drago Miklausic.

Mr. HALL. Mr. Speaker, I ask unanimous consent that this bill be put over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Missouri?

There was no objeciton.

MATYAS HUNYADI

The Clerk called the bill (H.R. 3436) for the relief of Matyas Hunyadi.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

PROVIDING FOR THE CONVEYANCE OF CERTAIN PROPERTY OF THE UNITED STATES LOCATED IN LAWRENCE COUNTY, S. DAK., TO JOHN AND RUTH RACHETTO

The Clerk called the bill (H.R. 14421) to provide for the conveyance of certain property of the United States located in Lawrence County, S. Dak., to John and Ruth Rachetto.

There being no objection, the Clerk read the bill as follows:

H.R. 14421

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior is authorized and directed to convey to John and Ruth Rachetto of Deadwood, South Dakota, all right, title, and interest of the United States in and to approximately 68.34 acres of land, together with all improvements thereon, located in Lawrence County, South Dakota, and more particularly described as lot 7, the north half of lot 8, and lot 2 in section 24, township 5 north, range 3 east, Black Hills meridian, containing approximately 73.14 acres, less lot 37 of lot 7, containing approximately 4.8 more or less. Such conveyance by the Secretary shall take place upon payment by or on behalf of John and Ruth Rachetto within two years from the date of enactment of this Act of the fair market value of the property being conveyed.

With the following committee amendments:

Page 1, line 6, strike out "68.34" and insert "79.79".

Page 1, lines 8 and 9, strike out "the north half of".

Page 1, line 10, after "Black Hills" strike out the remainder of the text ending on page 2, line 5, and insert in lieu thereof the following: "meridian. Such conveyance shall be made by the Secretary following application by John and Ruth Rachetto and payment, within one year from notification of the amount thereof, of the fair market value

of the property conveyed plus costs of appraisal and survey, if any, and the administrative costs of making the conveyance, all as determined by the Secretary. Moneys paid to the Secretary for administrative costs, appraisal, and surveys shall be deposited in the appropriation account then current for the agency which rendered the service. Moneys paid for the land shall be deposited in the general fund of the Treasury as miscellaneous receipts."

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

CLINTON M. HOOSE

The Clerk called the bill (H.R. 4665) for the relief of Clinton M. Hoose.

Mr. HALL. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Missouri?

There was no objection.

A. HUGHLETT MASON

The Clerk called the bill (H.R. 5017) for the relief of A. Hughlett Mason.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

ROGER STANLEY, AND THE SUCCESSOR PARTNERSHIP, ROGER STANLEY AND HAL IRWIN, DOING BUSINESS AS THE ROGER STANLEY ORCHESTRA

The Clerk called the bill (H.R. 5943) for the relief of Roger Stanley, and the successor partnership, Roger Stanley and Hal Irwin, doing business as the Roger Stanley Orchestra.

Mr. HALL. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Missouri?

There was no objection.

HERSHEL SMITH, PUBLISHER OF THE LINDSAY NEWS, OF LINDSAY, OKLA.

The Clerk called the bill (H.R. 6100) for the relief of Hershel Smith, publisher of the Lindsay News, of Lindsay, Okla.

Mr. HALL. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Missouri?

There was no objection.

CHARLES ZONARS

The Clerk called the bill (H.R. 7955) for the relief of Charles Zonars.

Mr. HALL. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Missouri?

There was no objection.

CENTRAL GULF STEAMSHIP CORP.

The Clerk called the bill (H.R. 12958) for the relief of Central Gulf Steamship Corp.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

DAVID Z. GLASSMAN

The Clerk called the bill (H.R. 13805) for the relief of David Z. Glassman.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Iowa?

There was no objection.

JACK A. DUGGINS

The Clerk called the bill (H.R. 14271) for the relief of Jack A. Duggins.

There being no objection, the Clerk read the bill as follows:

H.R. 14271

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay out of any money in the Treasury not otherwise appropriated the sum of $3,341.80 to Jack A. Duggins of San Bernardino, California, in full settlement of his claims against the United States for losses and expenses he suffered in disposing of property and arranging his personal affairs in order to depart for an assignment in Hawaii as an employee of the Air Force, which assignment was canceled just prior to the time he was to depart. No part of the amount appropriated in this Act shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

With the following committee amendment:

Page 1, line 5, strike "$3,341.80" and insert "$1,266.59".

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MARCOS ROJOS RODRIGUEZ

The Clerk called the bill (S. 1187) for the relief of Marcos Rojos Rodriguez.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Iowa?

There was no objection.

ARLINE LOADER AND MAURICE LOADER

The Clerk called the bill (S. 2514) for the relief of Arline Loader and Maurice Loader.

Mr. HALL. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Missouri?

There was no objection.

KATHRYN TALBOT

The Clerk called the bill (S. 2661) for the relief of Kathryn Talbot.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Iowa?

There was no objection.

ARTHUR JEROME OLINGER

The Clerk called the bill (S. 703) for the relief of Arthur Jerome Olinger, a minor, by his next friend, his father, George Henry Olinger, and George Henry Olinger, individually.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

Mr. DAVIS of Georgia. Mr. Speaker, I ask unanimous consent that further call of the Private Calendar be dispensed with.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Georgia?

There was no objection.

VICTOR L. ASHLEY—SENATE AMENDMENT

Mr. HUNGATE. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H.R. 11060) for the relief of Victor L. Ashley, with a Senate amendment thereto, and concur in the Senate amendment.

The Clerk read the title of the bill.

The Clerk read the Senate amendment, as follows:

Page 2, line 3, after "Ashley" insert "or, in the event of his death, to his estate,".

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Missouri?

There was no objection.

The Senate amendment was concurred in.

A motion to reconsider was laid on the table.

CALL OF THE HOUSE

Mr. HUNGATE. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

Mr. EDMONDSON. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 296]

Abbitt	Eckhardt	Meskill
Adams	Edwards, Calif.	Mikva
Anderson, Tenn.	Edwards, La.	Morse
	Fallon	Murphy, N.Y.
Ashbrook	Feighan	O'Konski
Baring	Flynt	Ottinger
Beall, Md.	Ford, William D.	Pelly
Bell, Calif.	Foreman	Philbin
Berry	Friedel	Powell
Blanton	Fulton, Tenn.	Price, Tex.
Blatnik	Gallagher	Purcell
Boland	Garmatz	Reid, N.Y.
Brock	Giaimo	Rivers
Brooks	Gilbert	Roe
Brown, Calif.	Gray	Rogers, Colo.
Broyhill, Va.	Hansen, Wash.	Rosenthal
Buchanan	Harrington	Roudebush
Burton, Utah	Hastings	Roybal
Bush	Hathaway	St Germain
Button	Hébert	Sandman
Cabell	Hicks	Satterfield
Casey	Hogan	Scherle
Celler	Holifield	Scheuer
Chappell	Horton	Schneebeli
Chisholm	Jones, Tenn.	Sebelius
Clark	Karth	Staggers
Clay	Kastenmeier	Stokes
Collins	Kleppe	Stuckey
Conte	Landgrebe	Talcott
Conyers	Landrum	Teague, Calif.
Coughlin	Lloyd	Teague, Tex.
Cowger	Lujan	Thompson, N.J.
Daddario	Lukens	Tiernan
Dawson	McCarthy	Tunney
de la Garza	McCulloch	Ullman
Diggs	Macdonald, Mass.	Watson
Dingell	MacGregor	Weicker
Donohue	Meeds	Widnall
Dowdy	Mikva	Wold
Downing	Morse	

The SPEAKER pro tempore (Mr. EDMONDSON). On this rollcall 313 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

LEGISLATIVE REORGANIZATION ACT OF 1970

Mr. SISK. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 17654) to improve the operation of the legislative branch of the Federal Government, and for other purposes.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from California.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Commitee of the Whole House on the State of the Union for the further consideration of the bill H.R. 17654, with Mr. NATCHER in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. When the Committee rose on Wednesday, July 29, 1970, the Clerk had read through section 119 ending on page 40, line 22, of the bill.

AMENDMENT OFFERED BY MR. SISK

Mr. SISK. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. SISK: On page 40, immediately below line 22, insert the following:

"(3) Clause 3 of rule XXVIII of the Rules of the House of Representatives is amended—

"(1) by striking out ', but their report shall not include matter not committed to the conference commitee by either House. '; and

"(2) by inserting in lieu thereof the following: '; but the introduction of any language in that substitute presenting a specific additional topic, question, issue, or proposition not committed to the conference commitee by either House shall not constitute a germane modification of the matter in disagreement. Moreover, their report shall not include matter not committed to the conference committee by either House, nor shall their report include a modification of any specific topic, question, issue, or proposition committed to the conference committee by either or both Houses if that modification is beyond the scope of that specific topic, question, issue, or proposition as so committed to the conference committee.'."

Mr. SISK. Mr. Chairman, before I discuss briefly the amendment which has been offered I should like to make a few very brief remarks with reference to the bill in general and what the time situation appears to be.

As we were notified prior to the recess, today, Tuesday, and Wednesday and Thursday of this week were to be devoted solely to the consideration of the reorganization bill. It was to have priority for this week.

It is the considered judgment of this Member that if we are to pass a bill on legislative reorganization this year it would seem to be almost essential that work be completed by Thursday night. I am not here trying to set any hard and fast rules, but I merely wish to call to the attention of all Members, who are certainly just as much concerned, I am sure, as I am, that if we are to do that we are going to have to expeditiously consider such amendments as will be offered from time to time.

It would be my hope that Members would be willing voluntarily to limit themselves to a reasonable period of time. As you know, we have not sought to cut off debate. It would be my hope we would not do so in the future. I am simply attempting to call your attention to the urgency of the situation. Today is September 15 and it would seem to me unless we can complete action and finally vote on this bill this week the chances of ultimate passage are not too good.

Mr. Chairman, I would like to conclude these brief remarks by saying that we have been in contact with a number of Members of the other body, Members who are interested and Members who are concerned and Members who have, through staff work, kept up to the minute with what we are doing. There are hopeful indications that the other body will expeditiously consider this if, as I say, we could pass it in a timely fashion.

I have as late as this morning discussed the situation with certain interested Members of the other body and the time period that we are confronted with. As I say, I am hopeful that if we can expeditiously complete our work, there is a possibility—and I think it is a good possibility—that we could see the final passage of a legislative reorganization bill this year.

Now, Mr. Chairman, I would briefly like to discuss the amendment which has been offered here.

This amendment arises out of some recent events that developed in connection with the actions by conferees. Of course, as we know, conferences are held as executive sessions and not open to the public. We have had a recent demonstration of new material being added to a bill, material that was neither considered by this House nor by the other body in committee or in debate on the floor of either body, having been placed in the legislation and in fact having become a part of the recently passed highway safety bill. I am sure any of you who have run into some of the problems that I have run into recently are somewhat concerned over this kind of a development.

I might say that the gentleman from Illinois (Mr. ERLENBORN) also called this matter to the attention of the committee, and he, as recently as, I believe, 1969, on a point of order concerning the very question that we seek to get at here, found his point of order was overruled even though seemingly the present language of article 3, rule XXVIII, would have precluded the injection of new material. Precedents going back to 1907, and even since, permitted the overruling of a point of order after it has been made in connection with new material having been injected in a conference at that time. So the language which you have here heard read simply proposes to make it impossible to bring in new material, material that has not been considered in one or the other body's consideration of the matter.

I would briefly like to read through the amendment again, because there are two or three points that I would like to emphasize in it. I am only using that part of the new language which pertains here: "but the introduction of any language in that substitute presenting a specific additional topic, question, issue, or proposition"——

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent, Mr. SISK was allowed to proceed for 5 additional minutes.)

Mr. SISK. Mr. Chairman, I apologize for the request for additional time and I would hope that I would not hereafter have to seek additional time. But in order to clarify and make some legislative history, if this amendment is adopted, it is necessary to discuss it a little bit further, and I will reread the language that I started to read: ", but the introduction of any language in that substitute presenting a specific additional topic, question, issue, or proposition, not committed to the conference committee by either House shall not con-

stitute a germane modification of the matter in disagreement."

Now, that particular language goes specifically to the issue on the recently passed Airway Safety Fund Act and I think that language would have precluded what was written in there in the way of what amounted almost to a secret provision having to do with penalties to try to avoid permitting the public knowing that they were paying an additional 3-percent tax upon their air travel.

Now, the second part of the amendment goes even further in an attempt to make certain that the proceedings of a conference committee which is held in executive session cannot go beyond the scope of what the committees of the two bodies in their floor debate held in the initial handling of the legislation, and it reads thus:

> Moreover, their report shall not include matter not committed to the conference committee by either House, nor shall their report include a modification of any specific topic, question, issue, or proposition committed to the conference committee by either or both Houses if that modification is beyond the scope of that specific topic, question, issue, or proposition as so committed to the conference committee.

Let me quickly cite a possible illustration of what we are talking about here. For example, the House passes a piece of legislation authorizing $1 million; the other body after having considered the legislation passes a bill authorizing $5 million; then the conference committee could not come back and report $10 million or, going the other way, report $500,000. The point is that it should stay within the scope of what the two bodies have done initially. And this also could apply in other cases other than in dollar amounts, but must stay within the scope of the legislation at the time that it was considered in the two Houses.

Mr. ERLENBORN. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield to the gentleman from Illinois.

Mr. ERLENBORN. Mr. Chairman, I thank the gentleman for yielding and I want to compliment the gentleman in the well and the other gentleman from California (Mr. SMITH) for taking the initiative in offering this amendment which I think will remedy the problem that we have been faced with in reports coming from conference committees.

Let me ask the gentleman in the well one question.

In the experience that I recently had with the Coal Mine Health and Safety Bill, I raised several points of order against the conference report. Let me give one example, and I would ask the opinion of the gentleman as to the construction and effectiveness of the amendment that the gentleman is offering.

In the bill on coal mine health and safety the House bill provided compensation for only complicated pneumoconiosis.

The bill of the other body likewise provided compensation only for complicated pneumoconiosis. The report of the conference committee extended the compensation benefits to all pneumoconiosis including simple as well as complicated pneumoconiosis. This was one of the points of order that I made against the conference report. In the opinion of the gentleman, if this language that the gentleman is offering had been part of the rules at that time, would my point of order have been valid and sustained?

Mr. SISK. In my opinion if I understand the language we are offering, your points of order would have been sustained.

Mr. ERLENBORN. I thank the gentleman.

Mr. SISK. That is the very kind of situation we seek to prevent.

Mr. VAN DEERLIN. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield to the gentleman.

Mr. VAN DEERLIN. Mr. Chairman, I rise in support of the Sisk amendment. Congress has been made to look very foolish by what happened in conference on the Aviation Facilities Expansion Act. The conferees on that important bill not only wrote new regulations into the law, but posted stiff financial penalties for violation of their new regulations.

I first directed the attention of colleagues to this prize bit of effrontery on July 1 of this year.

At that time I not only pointed out the absurdity of the regulations, but expressed doubt as to their constitutionality. That doubt was shared by a number of individuals, particularly among the ranks of travel agents and ticket sellers. One of them, David Peters, president of Timely Travel Inc., of Los Angeles, decided to press for a court test of their legality.

To this end, he announced publicly that he would defy the regulations and would list separately the amount of the tax on every domestic airline ticket sold by his agency. Mr. Peters sent to me a copy of a ticket he wrote in a manner which defied the regulations, and asked me to forward it to the appropriate agency. I forwarded the copy with a covering letter to the Commissioner of the Internal Revenue Service.

It is interesting to note that, whether by reason of the press of more important business or otherwise, the Internal Revenue Service has so far failed to take any action against Mr. Peters or the Timely Travel Agency.

One may experience either relief or regret, depending on one's point of view, at learning that Mr. Peters has discontinued his deliberate defiance of regulations. He did so, however, not because of the pressure of Federal agencies or because of his belief that his actions were unjustified. Rather, he was constrained to do so by the Air Transport Association, which threatened him with loss of his sales agency agreement if he persisted in his efforts to bring the matter into the courts.

On July 1 of this year, the day on which I called to the attention of my colleagues the lack of wisdom of the regulations that had been adopted, I introduced legislation to bring about a revision of the regulations as they applied to this particular matter.

It is clearly not feasible, however, and if it were it is neither sensible nor practical to attempt to correct by additional legislation undesirable actions taken in conference without approval of both Chambers. The Sisk amendment to H.R. 17654 would prevent the recurrence of such travesties upon the legislative process. It is for this reason that I strongly support the amendment.

For those who are interested in the details of the actions of the Timely Travel Agency and its attempts to bring about a court test of the regulations affecting ticket sales, I include copies of pertinent correspondence:

AIR TRANSPORT ASSOCIATION OF AMERICA,
Washington, D.C., August 20, 1970.

Mr. DAVID PETERS,
President, Timely Travel, Inc.,
Beverly Hills, Calif.

DEAR MR. PETERS: The August 18, 1970 issue of Travel Weekly, Page 1, reports "David Peters, President of Timely Travel, has begun to list the tax on every domestic airline ticket sold by his agency in defiance of the law that bars separating the increased domestic air tax from the ticket price".

You are advised that if the above quote from Travel Weekly is correct, Timely Travel is in violation of the Airports and Airways Bill passed by the Congress of the United States affecting all air travel within or from the United States on or after July 1, 1970. With respect to domestic tickets, including MCO's and XO's for air transportation, all of which are taxable at an 8% rate, the bill prohibits a carrier and/or its authorized agents from listing the fare and tax separately on the flight and passenger coupons. For each violation of this requirement, Congress has imposed a possible maximum $100.00 penalty.

A violation of the specific matter under discussion, if in fact it has occurred, would also appear to constitute a breach of Paragraphs 13 and 17 of the Sales Agency Agreement, in which event formal enforcement action may be required.

Accordingly, you are requested to immediately stop any such practice that may be in effect and immediately advise what action has been taken to correct this matter.

Very truly yours,
FRANKLIN OELSCHLAGER,
Director, Office of Enforcement.

AUGUST 26, 1970.

Re travel weekly August 18, re hidden tax.

Mr. FRANKLIN OELSCHLAGER,
Director, Office of Enforcement,
Air Transport Association of America,
Washington, D.C.

DEAR MR. OELSCHLAGER: I have received your communication of August 20 relative to subject matter.

As per your request, we have stopped any practice of separating the tax and the fare and will continue to abide by the law, which was passed by Congress, even though I feel that this law is unconstitutional and deceitful.

We wish to assure you, Mr. Oelschlager, that in no way did we intend to deliberately violate any of the rules and regulations in the Sales Agency Agreement, but I felt as a businessman, a taxpayer, and a citizen, I had a right to speak out. I feel that this now has been done and we have been heard from, and feel assured that our Congressmen will have this new tax law repealed.

I sincerely hope that this will satisfy your request, and I would appreciate it if you would please acknowledge same.

Very truly yours,
DAVID PETERS,
President.

TIMELY TRAVEL, INC.,
Beverly Hills, Calif., August 28, 1970.

Hon. LIONEL VAN DEERLIN,
House of Representatives,
Cannon Building,
Washington, D.C.

MY DEAR SIR: I received a call from the Press-Telegram of Long Beach quoting to me excerpts from the Congressional Record of your recent speech relative to the hidden tax. On behalf of the travel agents, I wish to thank you for your continued efforts in pursuing the repeal of this "tax law", which we all feel is unconstitutional and deceitful.

Enclosed please find a copy of an article published in Travel Weekly of August 18 and a copy of a letter that I received from the Air Transport Association of America and my reply. I am, also, enclosing a copy of a letter received from Senator Long.

For your information and guidance, I continued to disregard the law and wrote many tickets separating the tax and the fare. However, since receiving this communication from Air Transport Association, while I do not agree with them that I have in any way violated any of the conditions of the Sales Agreement, I must abide by their request because my appointments as a travel agent would be in jeopardy. While I am still willing to go to court to test the constitutionality of this tax law, I cannot endanger my position by being put out of business; therefore, my reply to the Air Transport Association was to abide by their request and I am now writing the tickets with the tax included.

At this time I have not been contacted by the I.R.S. or any other governmental agency. In the event that I am contacted, I will certainly advise your office.

Kind personal regards.

Sincerely yours,

DAVID PETERS,
President.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield to the gentleman.

Mr. GROSS. Using this bill as an example, suppose, on the passage of this bill, and I hope it will not be approved because of some of the provisions it contains, but suppose this bill is approved by the House and the gentleman should move to substitute a Senate bill? We might have no knowledge whatever of what the Senate bill contained. At what point could a point of order be raised against the provisions of the Senate bill?

Mr. SISK. If the gentleman will permit me, of course, what we are seeking to do in this amendment, should it pass, is to go through the normal procedure that we do very often, to strike out all after the enacting clause and substitute the House passed language on a Senate number and still keep away from this idea of new material.

Now it would be my assumption, of course, that the question of what was in the Senate bill at that point would not necessarily lead to a point of order. I think a point of order would come later in connection with the matter of germaneness which the gentleman knows we are going to be debating a little bit later this afternoon. I am referring now, of course, to the other body's rule which has no germaneness requirement, in attaching nongermane material to a House-passed bill.

But I would not visualize that it would be subject to a point of order if it deals with the same subject matter, and in essence is as a matter of course considered to be germane to the subject.

PARLIAMENTARY INQUIRY

Mr. O'HARA. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state the parliamentary inquiry.

Mr. O'HARA. Mr. Chairman, the gentleman from California has offered what I understand to be an amendment to the text of the language of section 119.

I understand that an amendment may be offered to strike out all of that section by another Member, or that a third Member might offer an amendment which would be a substitute to strike out all of that and put in something else.

My inquiry, Mr. Chairman, is this: If this amendment to the text were to be adopted, would it then be in order to offer an amendment to strike the entire paragraph, as amended, or to strike the entire paragraph, as amended, and insert a new text? Or must that be done before this amendment is voted on?

The CHAIRMAN. The Chair would like to inform the gentleman that after disposition of the pending amendment, it would be in order to strike out the entire section, or to strike out the entire section and insert a new section.

Mr. O'HARA. Then, Mr. Chairman, it would be possible for those Members who have any such idea in mind to wait until after the Sisk amendment is voted upon; is that correct?

The CHAIRMAN. The Chair would inform the gentleman that a motion to strike out would not be in order at this point.

The question is on the amendment offered by the gentleman from California (Mr. Sisk).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. BRADEMAS

Mr. BRADEMAS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. Brademas: On page 40, strike out lines 18 to 22, inclusive, and insert in lieu thereof the following:

"(2) Clause 2 of rule XXVIII of the Rules of the House of Representatives is amended to read as follows:

"'2. It shall not be in order to consider the report of a committee of conference unless such report and the accompanying statement shall have been printed in the Record, at least three calendar days (excluding Saturdays, Sundays, and legal holidays) prior to the consideration of such report by the House; but this provision does not apply during the last six days of the session. Nor shall it be in order to consider any conference report unless copies of the report and accompanying statement are then available on the floor. The time allotted for debate in the consideration of any such report shall be equally divided between the majority party and the minority party.'"

And make the appropriate and necessary technical changes in the bill.

The CHAIRMAN. The gentleman from Indiana, Mr. BRADEMAS, is recognized for 5 minutes in support of his amendment.

(Mr. BRADEMAS asked and was given permission to proceed for an additional 5 minutes.)

Mr. SISK. Mr. Chairman, before the gentleman starts, will the gentleman yield for a quick question for the purposes of clarification?

Mr. BRADEMAS. I yield to the gentleman from California.

Mr. SISK. Does the gentleman interpret his amendment, by the striking of certain language, to have stricken the amendment just adopted, or to leave intact the amendment just adopted?

Mr. BRADEMAS. It would be my intention and hope, subject to the ruling of the Chair, to leave intact the amendment just offered by the gentleman from California, which I support, but I would have to defer to the Chair on the question of whether or not the gentleman's amendment would in any way be affected by the amendment that I offered.

Mr. SISK. Will the gentleman from Indiana yield for a parliamentary inquiry?

Mr. BRADEMAS. Of course.

The CHAIRMAN. The gentleman will state his parliamentary inquiry.

Mr. SISK. Mr. Chairman, did the reading as to the striking of language in the first instance starting, I believe, with line 18, go to the balance of the page, or did it go to line 22? I ask this question in the light of the fact that it is my understanding that the amendment which I have just offered went to the matter below line 22, coming in addition thereto.

Mr. BRADEMAS. I believe that is correct.

The CHAIRMAN. The Chair informs the gentleman from California that the amendment offered by the gentleman from Indiana goes through line 22 on page 40. The amendment offered by the gentleman from California followed line 22 and inserted a new clause in the bill. So the gentleman's amendment will not affect the Sisk amendment just adopted.

Mr. SISK. I thank the gentleman for yielding.

The CHAIRMAN. The gentleman from Indiana is recognized for 10 minutes.

Mr. BRADEMAS. Mr. Chairman, I appreciate very much the clarification of the distinguished gentleman from California, and I want to take this time to congratulate him and all those on his committee who have worked so diligently to bring to the committee and to the House this very important measure.

The amendment that I offered, Mr. Chairman, I offered not only for myself but also on behalf of the gentleman from Illinois (Mr. ERLENBORN) the gentleman from Ohio (Mr. STOKES), and the gentleman from Pennsylvania (Mr. COUGHLIN), as well as on behalf of some 80 Members of the House of both parties. The amendment which I now offer is aimed at providing a minimal and necessary amount of time for the House to review the reports of conference committees and accompanying explanatory statements. We are all aware of the vital and important role that conference committees play in this body. They are granted enormous legislative authority in reconciling the differences in versions of bills passed by both bodies, moreover, because the consideration of conference reports is so important, the rejection of a report can mean the death of the legislation involved.

For these reasons, it is a grave matter for the House to reject a conference committee report. Thus, these reports are generally accepted with little controversy.

Yet, Mr. Chairman, this body is often uninformed about the conference reports on which it is passing. The reason is simple, we are often denied an adequate and reasonable opportunity to study the conference reports and the accompanying statements explaining them. Indeed, the Members most interested in a legislative issue are frequently unable to scrutinize the pertinent conference report before having to cast their vote on it.

Mr. Chairman, it is for reasons such as these, that my amendment is offered as one of the so-called "anti-secrecy" amendments—intended to reform the rules of this body so that it will better deserve the respect of the American public—and so that each Member might exercise his duties more effectively and responsibly.

Mr. Chairman, Members should not have to vote on conference reports without an adequate opportunity to study the changes made in conference committee—changes often of billions of dollars in magnitude and modifications sometimes reflecting a substantial difference in congressional intent from the legislation originally passed by the House.

Mr. Chairman, in summary, unless this body is merely to delegate final legislative authority to conference committees, due consideration should be given to their reports.

Mr. Chairman, let me then briefly outline the provisions of my amendment. I believe my colleagues will find it terse and to the point. The amendment states:

On page 40, strike out lines 18 to 22, inclusive, and insert in lieu thereof the following:

"(2) Clause 2 of rule XXVIII of the Rules of the House of Representatives is amended to read as follows:

"2. It shall not be in order to consider the report of a committee of conference unless such report and the accompanying statement shall have been printed in the RECORD, at least three calendar days (excluding Saturdays, Sundays, and legal holidays) prior to the consideration of such report by the House; but this provision does not apply during the last six days of the session. Nor shall it be in order to consider any conference report unless copies of the report and accompanying statement are then available on the floor. The time allotted for debate in the consideration of any such report shall be equally divided between the majority party and the minority party."

And make the appropriate and necessary technical changes in the bill.

Mr. Chairman, basically there are 3 points to my amendment.

First, the amendment provides that conference reports and explanatory statements must be printed in the CONGRESSIONAL RECORD 3 calendar days excluding Saturdays, Sundays and legal holidays, prior to consideration by this body.

At present, conference reports need only be printed in the RECORD any time before consideration. Thus a report could have been inserted late last night and called up for a vote as the first order of business today. And this is as members are all aware, a frequent practice.

The amendment states "calendar" days—rather than "legislative" days—because, it seems to me, we should propose the minimal amount of time necessary for consideration of conference reports.

Second, my amendment states that the printing of conference reports and accompanying statements three days prior to being considered shall not be required during the last 6 days of the session.

Mr. Chairman, this provision continues the present rule—item 912, paragraph 2 of rule 28—which pertains to the end of a session. That rule states that the requirement for the printing of conference reports and accompanying statements in the RECORD is suspended during the last 6 days of a session.

Similarly, the amendment I have offered would not require these documents to be printed in the RECORD prior to consideration by this body during the last 6 days of a session since we normally must dispose of a great volume of legislation at that time.

Third, my amendment provides that conference reports and the accompanying statements—whether or not considered during the last 6 days of the session—must be available on the floor during consideration.

Mr. Chairman, it seems only reasonable to ask that Members be able to read on the floor the exact text—and explanatory statement—of conference reports so as to understand what is in them before voting on them.

I would point out, finally, that my amendment leaves intact the committee reported provision which allots an equal amount of time for debate on conference reports to the majority and minority parties.

In other words, my amendment seeks to make the smallest changes possible—applying the present rules where applicable—in order to have conference reports available for a reasonable amount of time prior to their consideration by the House.

Mr. Chairman, let me try to anticipate one argument against my amendment. Some of my colleagues may say that conference reports are "urgent" business, and they may argue that this amendment would delay consideration of vitally important legislation.

Such an argument is clearly specious.

For, Mr. Chairman, the conference report on a bill often comes after months of hearings, after weeks of delay before being first considered by both bodies, and sometimes after weeks longer in a conference committee.

Under these circumstances, it would be extraordinary if a bill were so urgent that it could not await 3 days of scrutiny. Indeed, Mr. Chairman, if the conference report cannot survive such consideration, it should probably not be passed. Moreover, let me point out that the rules can be suspended should the Members deem extraordinary action necessary, and the rules committee could circumvent the provisions of my amendment by granting a conference report a rule in an unusual situation.

Of the 21 major appropriations and authorization bills for the first session of the 91st Congress which went to conference, 18—85 percent* were voted on by the House within 1 day after the conference report was printed in the CONGRESSIONAL RECORD. The three other reports were voted on by the House in 3 days or less.

Clearly, Members of this very Congress have often had little more than 1 day to study conference reports.

This is dramatic evidence of the "secrecy" which enshrouds many conference reports until the last moment before they are voted on.

Finally, Mr. Chairman, let me point out that the privileged status of conference committee reports—which had its origin in a temporary rule in 1850 and which was formally adopted by this body in 1880, is not here in question.

That privileged status allows for conference reports to be brought up at almost any time.

This privileged status of conference reports is maintained by my amendment, but with the proviso that they be printed in the RECORD at least 3 days prior to their consideration.

Mr. Chairman, it was in 1902, that rule XXVIII of this body was amended to assure that conference committee reports be printed in the RECORD before their consideration, which could mean, as I have said, as little as 1 day's notice before a vote.

But Mr. Chairman, in the seven decades since that amendment, the legislative issues facing this body have grown in numbers and have become immensely more complex.

I feel that these facts alone justify the amendment I am offering today. For it assures a reasonable amount of time for the Members to consider conference reports on a wide range of complex legislative issues and assures the availability of these reports and explanatory statements on the floor.

I urge my colleagues to support this statement and at this point in the RECORD, list the names of those Members who are sponsoring the amendment:

LIST OF SPONSORS

Messrs. Brademas, Erlenborn, Adams, Addabbo, John Anderson, Brasco, Brown of California, Burke of Florida, Mrs. Chisholm, Messrs. Clay, Cleveland.

Messrs. Cohelan, Conyers, Coughlin, Crane, Culver, Daddario, Dellenback, Dennis, Derwinski, Eckhardt.

Messrs. Edwards, Evans, Farbstein, Fascell, Findley, William D. Ford, Fraser, Frey, Friedel, Green of Pennsylvania.

Messrs. Halpern, Hanley, Harrington, Hathaway, Hechler of West Virginia, Helstoski, Hicks, Hogan, Howard, Kastenmeier, Keith.

Messrs. Koch, Leggett, Long of Maryland, Lowenstein, Lujan, Lukens, MacGregor, McCarthy, Matsunaga, Melcher.

Messrs. Mikva, Minish, Moorhead, Morse, Mosher, Moss, Obey, O'Neill, Ottinger, Patten.

Messrs. Podell, Pryor, Reid of New York, Reuss, Riegle, Rodino, Rooney of Pennsylvania, Roth, Roybal, Ruppe.

Messrs. Ryan, Scheuer, Schwengel, Steiger of Wisconsin, Tiernan, Tunney, Van Deerlin, Vanik, Waldie, Weicker, Whalen, Wright.

Mr. GONZALEZ. Mr. Chairman, will the gentleman yield?

*Only one of these was during the last 6 days of the session.

Mr. BRADEMAS. I yield to the gentleman from Texas.

Mr. GONZALEZ. Mr. Chairman, I thank the distinguished gentleman from Indiana for yielding.

I compliment him on this amendment, if my interpretation is sound and correct and in accordance with the thrust of his amendment.

First let me preface my question by saying recently we had what I am sure many of us considered to be an embarrassing experience with respect to the enactment of the legislation which created the Air Transportation Trust Act. I am sure when the bill left the House, and even when it went to conference, there was no provision which made it imperative to prohibit people from knowing the amount of the increase of the tax airline travelers would have imposed on them.

It was quite a surprise—in fact, a shocking surprise—to discover that this was, in effect, a well and clearly written provision which, according to later explanations, was incorporated during the conference sessions but which at no time was even discussed in this House or by any committee.

To me it seems futile to talk about legislative reorganization and reform so long as this type of practice continues. It is a reflection on each and every one of us, and even a reflection on our integrity and our ability as to the prime constitutional function and responsibility we have, which is to legislate.

If I correctly understand the gentleman's amendment, it would help to prevent this type of thing.

Mr. BRADEMAS. The gentleman is exactly correct, even as would the amendment of the gentleman from California, just adopted. My amendment would make it possible for Members to examine carefully conference reports and determine whether or not there was some material in a conference report which in point of fact had not been included by either body and therefore would not be appropriate for inclusion in a conference report.

Mr. GONZALEZ. I compliment the gentleman and I urge my colleagues to approve the amendment.

Mr. BRADEMAS. I thank the gentleman.

Mr. HALL. Mr. Chairman, will the gentleman yield?

Mr. BRADEMAS. I yield to the gentleman from Missouri.

Mr. HALL. In the opinion of the gentleman offering the amendment, would this do any damage to or alter the present rules, which would require that the House by resolution or other device determine a day certain for adjournment sine die, before the 6-day provision was invoked?

Mr. BRADEMAS. So far as I am aware, Mr. Chairman, the amendment I here offer would not be relevant to that particular problem. That is another matter.

Mr. HALL. Mr. Chairman, will the gentleman yield further?

Mr. BRADEMAS. I yield further.

Mr. HALL. By the very wording of the amendment, in two different places it says that except for 6 days prior to adjournment certain reports would not need to be printed in advance, et cetera. My question deals with whether or not, as in the case of the rule suspensions, which I believe is 7 days prior to a date definitely fixed by resolution of the House, this would be in effect. Would the same rule apply insofar as a definite determination of the date of adjournment by the leadership, by resolution, by action of the House, before the 6-day exempting clause went into effect?

Mr. BRADEMAS. I hope I understand the gentleman's question.

The amendment I offer is applicable only to conference reports and not to other questions, such as resolutions of adjournment. As the gentleman from Missouri can see if he will look at page 39 of the bill under consideration, the sections which we are presently considering pertain only to conference reports and not to other resolutions or other forms of activity in the House.

The CHAIRMAN. The time of the gentleman from Indiana has expired.

(On request of Mr. HALL, and by unanimous consent, Mr. BRADEMAS was allowed to proceed for 2 additional minutes.)

Mr. HALL. Mr. Chairman, will the gentleman yield further?

Mr. BRADEMAS. I want to say to my friend from Missouri, perhaps I am not understanding his question, but if he will look at my amendment he will see it has to do only with the question of the printing of conference reports.

I yield to the gentleman.

Mr. HALL. I do understand that. My question is, as simply put as possible, in the case of conference reports will the 6-day period be determined in the same manner as we do for suspensions coming in order 6 or 7 days before the finally set date of sine die adjournment? There has to be some determination of that date.

Mr. BRADEMAS. Yes.

Mr. HALL. How do we tell when the 6 days will be invoked, and when it ends, without the prior determination of the sine die adjournment?

Mr. BRADEMAS. Again, hopefully I understand the gentleman's question.

My amendment has nothing to do with and in no way would change the present method of determination of the last 6 days of the session.

Mr. SMITH of California. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, as the gentleman from Indiana stated, there will probably be objections to this from a time standpoint. Reading over the amendment, it seems to me it is too inflexible. The purpose and the intent of the language I have great respect for, and I would like to try to work it out.

The amendment says "nor shall it be in order to consider any conference report unless the conference reports are available on the floor." Now, certainly I think that is good language and we should have that in the rules. I do not believe we should consider conference reports until the Members have a chance to read them. But to wait for 3 calendar days, excluding Saturdays, Sundays, and legal holidays, which could be 6 days, because you could recess from Thursday to Monday, then have a legal holiday occur on Monday, and then you would have to wait 3 more days.

This provision does not apply to the last 6 days of the session. I would like to ask anybody how do you determine that last 6 days? We have to have a resolution passed for adjournment sine die. Some years ago the House did pass one. The other body objected quite strenuously. So we are proceeding now where we are passing a resolution 24 hours, maybe, before we are going to adjourn sine die. Now, what happens to conference reports that we have to consider during that period of time? Are we going to put them over and wait 3 days and have the Committee on Rules waive points of order and wait over 24 hours in order to consider the conference report? In other words, it seems to me that we are just locking the House in too tightly here. This procedure is too inflexible and too difficult to interpret from the standpoint of when we can adjourn.

As I stated, I have no objection to having copies of conference reports made available. The last part of the amendment providing for equal time to debate conference reports is already in the committee's bill. I support it.

The gentleman from Texas, Mr. GONZALEZ, mentioned this would take care of the situation where material added in conference was not in either House's version of the bill. The Sisk amendment takes care of that issue. This amendment will not affect that at all. The Sisk amendment, which was just adopted, will confine the conference report to the material in the Senate or the House bill. Nothing could be brought into that conference report for the consideration of the House under the Sisk amendment unless it was either in the House or the Senate passed bill.

So I object to the amendment, Mr. Chairman, although I think we ought to know what we are doing on conference reports. This is a little bit too inflexible, and I believe it goes too far. It would be too difficult for the Speaker to decide these questions when points of order are made as to when we will adjourn, or when the last 6 days of a session begin.

So I oppose the amendment, and I hope we turn it down.

Mr. SISK. Mr. Chairman, will the gentleman yield?

Mr. SMITH of California. Yes. I yield to the gentleman.

Mr. SISK. I thank the gentleman for yielding.

I simply want to join with my colleague from California in his position on the matter. I am completely sympathetic with what the gentleman from Indiana seeks to do here, which is given more information and more time for study to the Members. We all agree on that. I find that there is inflexibility here, and the problem as he outlines it in connection with the 6 days is a difficult problem. We do not know what the time will be. The time cannot start running until a resolution for adjournment has been approved. Of course, under our situation no one has any idea of that now. My only objection lies to what seems to me to be

a 6-day delay, which could occur over a legal holiday weekend.

Mr. BRADEMAS. Mr. Chairman, will the gentleman yield?

Mr. SMITH of California. Yes. I yield to the gentleman.

Mr. BRADEMAS. As I understand the gentleman's question, it seems to me that I have in no way by my amendment changed the rules of the House with respect to the 6-day provision. I call the gentleman's attention to rule XXVII, the change or suspension of rules, which reads as follows:

> No rule shall be suspended except by a vote of two-thirds of the Members voting, a quorum being present; nor shall the Speaker entertain a motion to suspend the rules except on the first and third Mondays of each month, preference being given on the first Monday to individuals and on the third Monday to committees, and during the last six days of the session.

So I appreciate the comments of the gentleman but I do not believe that my amendment as offered has any effect in changing the present rules of operation of the House with respect to the last 6 days of a session.

Mr. SMITH of California. May I ask the gentleman a question?

Mr. BRADEMAS. Certainly.

Mr. SMITH of California. The gentleman from Indiana is very knowledgeable of the rules of procedure here. May I ask the gentleman from a practical standpoint now under the House procedures and its rules, when would the gentleman say the last 6 days of this 91st Congress, second session will start, and how will we determine it as to the last 6 days before we adjourn?

Mr. BRADEMAS. The gentleman's question is an exercise in metaphysics, not in parliamentary law because I answered the gentleman: The same way we presently determine the last 6 days of a session.

Mr. SMITH of California. We never have had the last 6 days determined before adjournment in a resolution passed for a sine die adjournment but once during my 14 years here. We are talking about adjournment now by October 15, or maybe October 22, or Thanksgiving or Christmas, but I imagine that we will all get ready to go about 24 hours before we pass a sine die resolution. What will we do with all the conference reports then?

Mr. BRADEMAS. I understand the point the gentleman is making and I think it is very well taken, but I could ask the same question that the gentleman asked as to the rules of the House, because in the rule that I have just read, which is presently the rule, the language is used "during the last 6 days of a session." That is presently the rule.

Mr. SMITH of California. That rule has been ignored as long as I have been here in the House.

Mr. BRADEMAS. That is a different matter.

Mr. SMITH of California. I am for the gentleman's principle but I think that it is going to make it awfully difficult to handle say the 16 major bills from ways and means which have passed the House and which are in the Senate, or if the appropriations are held up, how are we going to get them out at the end of a session?

Mr. BRADEMAS. I understand the point the gentleman raises, but I think the gentleman upon reflection—and I see a smile come to his cheeks, would agree with the fact that my amendment in no way changes the rules of the House under which we are presently operating that contains the phrase "during the last 6 days of a session." So I do not change that.

The CHAIRMAN. The time of the gentleman from California has expired.

Mr. ERLENBORN. Mr. Chairman, I support the amendment offered by the gentleman from Indiana and cosponsor it as he stated when he presented the amendment. This amendment is complementary to the one that has just been adopted without objection. The amendment that I refer to was the one offered by the gentleman from California (Mr. SISK). I think that was an excellent amendment, as I stated in my support of it at the time, but if we want to make the Sisk amendment effective we must give the Members of the House an opportunity to read the conference report to see if the conference report conforms with the rules of the House.

As the practice is today, the conference report can be filed any time prior to midnight by asking unanimous consent. That is the usual practice. Unanimous consent is given to file a report at any time prior to midnight and it is included in the RECORD for that day. The report can then be called up at the opening of business the next day, and there is little opportunity for the Members to look at the conference report to determine whether the rules have been conformed to.

As to the provision of counting 3 calendar days, if there is a legal holiday, I think it is rather obvious that it would be an inopportune time to file such a report on a holiday weekend. For instance, if the House had been in session on Friday prior to the Labor Day weekend unanimous consent could have been granted to file a report by midnight on Friday; the proceedings of that day, the RECORD, would not be printed until Saturday. No one would have an opportunity to see this over that weekend, Saturday and Sunday or Labor Day, Monday, and then the matter could be brought up at the opening of business on Tuesday, and there would be the same difficulty examining the conference report to see if it conforms with the rules of the House, or to see if a Member wants to support it, or if he wants to actively oppose the conference report.

Mr. FRASER. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. I yield to the gentleman.

Mr. FRASER. As to the last 6 days, it seems to me that what this does is to provide one option. If there should be a resolution for adjournment adopted ahead of time, then you would know when the 6 days began to run.

The gentleman has also identified another option, which is a request for unanimous consent.

A third option, of course, would be for the Committee on Rules to report out a rule suspending the 3-day layover requirement when we were clearly coming to an end of a session and there was no sine die resolution.

So it seems to me, if we took this 6-day provision out, we would simply be taking out one option. But as we come to the close of a session, there are a number of things that may have to be done to make sure that we could close all business, and as I say, I do not see any harm in having this provision in, the 6-day provision, even though it may not be operative in most cases.

Mr. ERLENBORN. I think the gentleman has made a valuable contribution. He is right, in my opinion.

First of all, let me state that the question of the 6 days is not introduced by this amendment. I think the gentleman from Indiana (Mr. BRADEMAS) tried to make this clear. Reference to the last 6 days of the session is in the present rule and any of the problems that arise as to identify when these last 6 days begin to run is presently a problem in the rules. So we are not introducing this as a new problem.

The gentleman, I think, correctly states that there are several alternatives.

One would be to see that a resolution providing for sine die adjournment is adopted at least 6 days prior to the end of the session, which is seldom done. But it could be done if the leadership of the House so required.

Second, the Committee on Rules can grant a rule for the consideration of conference reports.

The gentleman suggests further that unanimous consent could be given.

So I think the safeguards are there to see that the business of the House in the last 6 days can be handled expeditiously. Let us not, in worrying about the last 6 days of the session, prohibit, as we now do during the balance of the session, Members of the House being able to properly manage their legislative business by seeing the conference reports and having the opportunity to examine them before being required to vote on them on the floor.

Mr. SMITH of California. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. I yield to the gentleman.

Mr. SMITH of California. Mr. Chairman, we are talking of suspension of rule 27 which has to do with the suspension of bills on the first and third Monday of the month. That is the start of legislation. In other words, we have a bill and, with two-thirds present and voting, suspend and pass a bill—and that starts it.

Now the conference report is the end of the legislation.

So they are two different subject matters. We are not talking about changing rule 27, which does not apply to sine die adjournment. That has to do with suspensions where we institute legislation.

Mr. ERLENBORN. May I answer the gentleman. Apparently, the gentleman is not aware that presently under rule 28

we have reference to the last 6 days of the session. We are not referring to suspensions on Monday. We are referring to the last 6 days in rule 28. There is no change in this amendment we are offering.

Mr. COUGHLIN. Mr. Chairman, I move to strike out the last word and rise in support of the amendment.

Mr. Chairman, I wish to associate myself with the remarks of the gentleman from Indiana (Mr. BRADEMAS), the gentleman from Illinois (Mr. ERLENBORN), and the gentleman from Ohio (Mr. STOKES).

As a relatively new Member of this great body, few things have frustrated me more than the mysteries of the conference report.

At present, conference reports can be taken up any time after they have been printed in the RECORD. Often they are rushed through so fast they never appear on the whip notices. Sometimes, a report filed late one day is voted on as soon as the House convenes the next day.

I, as other Members, have often walked from my office to the House floor for a vote without even knowing what was being voted upon, much less what the report contained. Some conference reports run to several hundred pages and involve considerable changes in dollar amounts and the law itself. As a result, there is little chance for a Member to cast an intelligent vote of he does not know what is in the report. It also usually precludes some Members with interest in the report from taking part in the debate.

It makes no difference, in the last analysis, how many open hearings are held, how many hours there are of debate, or how many amendments are accepted, because it is conference reports that become law. If Members cannot study the final product, how can they possibly cast a wise and intelligent vote?

The primary purpose of this amendment is to give Members sufficient time to familiarize themselves with these reports before they are faced with a debate and vote on the floor. The amendment is also designed to eliminate the secrecy which currently surrounds much of the formulation and passage of conference reports.

There are those who argue that conference reports are, by their nature, urgent pieces of legislation that must be passed without any delay whatsoever. In response to that, I say that any legislation that takes weeks, often months, of preparation deserves to be available for at least 3 calendar days in its final printed form so that it can be studied by all those who must ultimately bear responsibility for it.

In addition, a 3-day layover of conference reports will encourage those responsible for drawing up the report to complete their work in such time that a question of urgency never arises.

If, however, there does occur a situation in which it is deemed prudent to bring out a conference report and vote on it immediately, then either a vote can be taken on suspending the rules, or the Rules Committee can be asked to grant a rule suspending the printing.

This amendment is not designed to slow up or hinder the orderly passage of legislation. We recognize, for instance, that the last days of a session make such a rule unwise, and it is for that reason that we included suspending the 3-day layover provision during the last 6 days of the session. The amendment still requires, however, that copies of the report and its accompanying statement be available to Members on the floor at the time of debate.

I believe that this amendment is the least we can do to insure that Members are fully aware of the provisions in the final legislation on which they are asked to vote.

I ask that you support us by voting for this amendment.

Mr. GROSS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in support of the ammendment. What happens on some occasions in dealing with conference reports is unconscionable. It is unconscionable that a conference report may be printed in the RECORD one night and called up in the House at noon the next day as the first order of business. Oftentimes Members do not have the time—they may be busy with an important committee meeting in the morning—to read the RECORD containing the report. So we are confronted with consideration of what may be a very important conference report without having had the time to reasonably consider what it contains.

Insofar as the 6-day rule is concerned, let the leadership of the House fix the time for sine die adjournment—that is all they have to do. Then they can call up all the bills they want to under suspension of the rules, or conference reports in less than the 3 days as provided in the amendment. If I were to find any fault with the amendment, it would be the suspension of the 3-day provision in the last 6 days of the session. Some of the most important conference reports are called up near the end of the session. This is when we may need more time to consider conference reports than at any other during the entire session of Congress.

But I think the amendment is a good one and I support it.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Indiana (Mr. BRADEMAS).

The amendment was agreed to.

The CHAIRMAN. Are there additional amendments to be offered to this section? If not, the Clerk will read.

The Clerk read as follows:

ADDITIONAL PROVISIONS PERTAINING TO GERMANENESS OF AMENDMENTS OR MOTIONS WITH RESPECT TO MEASURES BEFORE THE HOUSE

SEC. 120. Rule XX of the Rules of the House of Representatives is amended by adding at the end thereof the following new clause:

"3. Any amendment or motion with respect to any measure before the House, other than any amendment within the class of motions or propositions to which clause 7 of rule XVI applies, which would be subject to a point of order on a question of germaneness under clause 7 of rule XVI if that clause were applicable to that amendment, or any rule or order or motion providing for agreement to such amendment to that meassure, or any conference report containing any such amendment, shall require for adoption, on the demand of any Member, a vote of two-thirds of the Members voting, a quorium being present. It shall be in order to debate for forty minutes, before the vote is taken, any such amendment, motion, rule, or order, one-half of such time to be given to debate in favor of, and one-half to debate in opposition to, the same. This clause is subject to, and does not modify, change, supersede, or otherwise affect, the application and operation of clause 7 of rule XVI.".

AMENDMENT OFFERED BY MR. GIBBONS

Mr. GIBBONS. Mr. Chairman, I offer an amendment. The Clerk read as follows:

Amendment offered by Mr. GIBBONS. On page 41 strike all of section 120, lines 1 through 23, inclusive.

On page 2 in the table of contents strike "Section 120" through "before the House" and renumber as necessary.

The CHAIRMAN. The gentleman from Florida (Mr. GIBBONS), is recognized for 5 minutes in support of his amendment.

Mr. GIBBONS. Mr. Chairman, my amendment is a very simple amendment. It would strike all of the language that the Members will find on page 41 of the bill.

As anyone can see from examining the language on page 41, this is entirely new material. It is new to the rules of the House of Representatives and it provides that, in effect, the Senate cannot amend one of our bills unless it complies with our germaneness rule. I know there are some people who would like to have the Senate do that, and I imagine the Senate has a few little cuties they would like to have done to us too, but I submit as a matter of comity and as a matter of legislative practice, so that this bicameral legislative system can operate, it appears to me we cannot, in effect, amend each other's rules.

The Members of the House cannot make such changes in their rules that, in effect, by inference amend the rules of the Senate, and that is what the language on page 41 does.

There are many, many historical examples of good pieces of legislation and bad pieces of legislation that have been passed in what would be in violation of this particular rule here in the text, which I am seeking to strike. Regardless of the merits of any of those pieces of legislation or their demerits, it seems to me in a bicameral system such as we enjoy in this country we have to grant to the other body comity for their pieces of legislation. We cannot require that a piece of legislation they send over here require a two-thirds vote rather than a simple majority vote. I would seriously doubt the constitutionality of the language of the provisions on page 41, but that is not for us to decide here.

I would say as a matter of legislative practice, if we want to accomplish anything and pass any legislation, we would have to grant to the Senate what we would want them to grant to us. Let us not tinker with their rules, with the understanding that they will not tinker

with ours, because if we do tinker with each other's rules, there will not be any legislation passed.

Mr. UDALL. Mr. Chairman, will the gentleman yield?

Mr. GIBBONS. I yield to the gentleman from Arizona.

Mr. UDALL. Mr. Chairman, I have always had mixed feelings about the germaneness rule. I am always frustrated, as I am sure other Members are, when something in which I am intensely interested in is acted on in the Senate, and a nongermane provision is added. I would be inclined to support the gentleman's amendment, not because the present practice benefits liberals, or conservatives. I do not know how I would stand the merits of the argument. My main reason is: I would like to see a reform bill this year. Time is running out, and if the bill as now written goes to the Senate, in my judgment it is very clear the Senate will never accept it with that provision in; there will have to be an extensive conference and there simply will not be a bill. So we should take this provision out and then maybe come back and fight it out on the merits on another day.

I think this is the strongest possible reason for adopting the amendment offered by the gentleman from Florida. The bill will not become law this year if the existing language stays in.

Mr. GIBBONS. Mr. Chairman, I thank the gentleman for his remarks. He has certainly put his finger right on the pulse of this situation.

Mr. SISK. Mr. Chairman, I rise in opposition to the amendment offered by the gentleman from Florida.

I think, first, Mr. Chairman, I would like to say in connection with the comments of my good friend, the gentleman from Florida, that he is totally erroneous when he mentions about our dealing with Senate rules. We do not deal with the rules of the other body. This has nothing whatsoever to do with the rules of the other body. This is an action which we can take here any day by mere House resolution. It requires no approval or disapproval or anything else by the other body.

In fact, I might say, Mr. Chairman, that there has been considerable discussion, and there was even in the subcommittee, that in the event this entire bill failed to move because of some development in the other body or further down the line, that the House could take title I, eliminating only those references to the other body, and pass as a simple House resolution practically all the material in title I.

It does deal exclusively with the House committee, with the House rules, and with procedures on the House floor.

Without going into the merits or demerits of the germaneness amendment, certainly it is within our prerogatives to determine our own rules. That is the only thing which is being considered here. In no sense can it be considered to have any bearing upon the rules or procedures of the other body.

I should like to further say that I have serious doubts about this particular legislation having any effect upon the passage or the lack of passage by the other body of a legislative reorganization bill this year. It would be my assumption, based on the information I have received—and to some extent I referred to it earlier in my discussion—that there is considerable interest by Members of the other body in a legislative reorganization bill. I happen to be hopeful that if we can proceed this week to conclude action on this they in turn probably will pass something. It might be that they might pass a bill without this language. That is strictly up to them.

The issue here is that this deals with a matter affecting the House. It is a matter the House can act on by resolution. It does not have to be in this bill or be signed into law as a part of a reorganization bill or a part of a statute.

Therefore, it comes down to the matter of whether or not we wish to do something about this business of dealing from time to time with matters wholly removed from the subject with which the House bill may deal.

I am sure we are all familiar with instances in the past. For example, there was an immigration bill, a private bill dealing with an immigration matter in connection with one individual, as to which we were faced with a situation where a public works project was attached to that particular bill.

Again this is a matter, I suppose, for the individual desiring the project, who wanted to seek that method of achieving the result on legislation, and in that sense it would be in his favor, yet I believe we would all quickly agree that is not good legislative procedure. Basically that is what we seek to deal with in connection with this.

Mr. REES. Mr. Chairman, will the gentleman yield?

Mr. SISK. I am glad to yield to the gentleman from California.

Mr. REES. I thank the gentleman for yielding.

Is it not true that this amendment would in reality define what the other body rule would be? The House has a very tight germaneness rule. In fact, I believe it is too tight. The Senate has a loose germaneness rule. If we put changes in our rules, we would be telling the Senate they must use our rules in their amending House bills, by requiring a two-thirds vote.

Mr. SISK. If my colleague will permit me, we are not telling the Senate anything.

Mr. REES. Yes. We are telling them they have to have a two-thirds vote on their amendments to our bills.

Mr. SISK. We are not telling them anything.

The gentleman and I are both in violation of the rule when we use a term other than "the other body." Let us try to stay within the rules.

We are not telling the other body anything. We are simply setting up a procedure whereby in the event that certain circumstances develop we can go ahead and pass the legislation.

If the gentleman will permit, this is a matter a great many people have been interested in. I might say the distinguished chairman of the Ways and Means Committee, the distinguished chairman of the Judiciary Committee, the distinguished chairman of our committee (Mr. COLMER) and many others have been interested.

The language we have here today is a compromise worked out by a number of people who, as committee chairmen and others concerned with the handling of legislation in conference, have worked on and developed language to permit the House to go ahead and work its will. It in no sense binds, restricts or withholds from the other body any kind of action.

Mr. CONABLE. Mr. Chairman, I rise in support of the amendment.

Mr. Chairman, I think, as a member of the Committee on Ways and Means, I know the rationale back of this provision in the bill. Nobody is more upset than the members of the Committee on Ways and Means when we send over a simple seedling and it comes back a full-blown Christmas tree from the other body—and this happens frequently. Certainly, if this provision were a simple House resolution, I would support it and wholeheartedly. As a part of this legislation, however, it seems to me that we must consider its probable impact on the future course of this legislation.

Mr. Chairman, I am one of those who believe that it is awfully important for our central institution of government to demonstrate itself capable of internal reform. I think that the other body, regardless of the technical means by which this provision is expressed, is bound to view this provision as an implied criticism of their rule of nongermaneness.

It is important, with the length of time we have left the 91st Congress, that we send this legislation on its way with as few obstructions to passage in the other body as necessary.

If I were a Member of the other body, I might feel, regardless of the form in which this provision is expressed, that I was receiving some degree of criticism from the House of Representatives. Therefore, I hope that we will express a restraint in our approach to substantive changes affecting the other body as we complete our consideration of this reorganization bill.

This bill is, for the most part, a House reorganization bill, and it should remain that. It is quite obvious that the other body would not have time for extensive hearings. If I read the priorities expressed by the majority leader there correctly, there is not a great deal of priority interest in this provision. If we load it up with things even impliedly affecting the rules of the other body, it is obvious to me that there is going to be some further delay in the consideration of this legislation there.

So, if this can be handled as a matter of a House resolution, let us consider it separately. There is no question but what we can bring about substantial change in the House rules at the beginning of the next session of Congress; but having come this far on this measure, let us move ahead and get it passed in a form

which will be least likely to trample on the sensitivities of the other body.

Mr. Chairman, I hope that the amendment will be passed. I hope it will have the understanding of the membership because I do think it is likely to have a major impact otherwise on the course of this legislation.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. CONABLE. Yes. I yield to the gentleman.

Mr. GROSS. How does this affect the other body? This provision says that rule XX of the Rules of the House of Representatives is amended by adding at the end thereof, and so on and so forth. In what way does it affect the rules of the Senate?

Mr. CONABLE. It is a change in the House rules which requires or permits a Member of the House to insist on a two-thirds vote of support on any amendment that has been added in the other body which is nongermane. It is certainly an implied criticism of the rule which permits the other body to add nongermane amendments.

Mr. GROSS. Then, is the gentleman saying that this provides for a two-thirds vote in order to strike out the nongermane amendment added by the other body?

Mr. CONABLE. That is correct.

Mr. GROSS. This ought to be defeated. Why should the House have to go to a two-thirds vote to strike out a nongermane amendment added by the other body?

Mr. CONABLE. No; this says a special two-thirds vote can be required on an amendment passed by the other body which is nongermane. Unless it is passed by a two-thirds vote in this House, on request by a Member of this House, then it is considered defeated.

Mr. GROSS. Then the requirement for a two-thirds vote is in the other body, is that what the gentleman says?

Mr. CONABLE. No; the requirement is that the amendment passed by the other body which is nongermane must have a two-thirds vote of support in this House or it is considered defeated.

Mr. GROSS. Why should we have any kind of a vote on an ungermane Senate amendment? Why should it not be subject to a point of order?

Mr. CONABLE. The question is, What happens when the bill comes back from conference and it has a nongermane amendment added by the other body?

Mr. GROSS. Well——

Mr. CONABLE. And this is the requirement.

Mr. GROSS. Instead of this procedure I would be in favor of an amendment that provided we could knock it out on a point of order.

When it comes to a matter of legislation of this character, as important as this is, I am not interested in this thing that is spelled c-o-m-i-t-y and which oftentimes ends up as "comedy." I am not interested in protecting the so-called comity between the two bodies when across the way they hang nongermane amendments on our bills. We ought to be able to eliminate them expeditiously and without a vote.

Mr. CONABLE. Whether the gentleman from Iowa is willing to accept this or not, this is a bicameral legislature, and I think some degree of comity is required if we are going to be able to carry on successfully at both ends of the Capitol.

Mr. O'HARA. Mr. Chairman, will the gentleman yield?

Mr. CONABLE. I yield to the gentleman from Michigan.

Mr. O'HARA. Mr. Chairman, I am in limited agreement with the gentleman from Iowa on his last point. I think there ought to be some way in which we can handle these things as we do legislation on an appropriation, as separate amendments in disagreement, but I do not go as far as the gentleman from Iowa who says we ought to be able to strike it out as nongermane on a simple point of order.

Mr. CONABLE. That obviously would be, if the gentleman would permit me to interrupt, a House intrusion on the rules of the other body.

Mr. O'HARA. That is right, and in the bill the committee is introducing a two-thirds vote concept as if a nongermane provision was a constitutional amendment. I do not know what business the two-thirds vote has in here.

I would ask the gentleman from Iowa what his feelings are about the two-thirds vote? Does he not believe, we either ought to fish or cut bait. This business of a two-thirds vote does not appeal to me as being a sensible way of handling it.

Mr. GROSS. If the gentleman will yield further, is the other body not transgressing upon the House, when, for instance, it takes a House bill dealing with the mailing of master keys for automobiles and adds wholly ungermane legislative subject matter to that bill? They are invading the prerogative of the House, which does have a rule as to germaneness.

Mr. CONABLE. I think it boils down in the final analysis to whether or not you want to see this reorganization bill pass in this session of the Congress. This can be handled separately and it should be handled separately.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. COLMER. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I do not know of anything that I am more interested in since I have been a member of the House Committee on Rules than I am in this provision that we are now debating in the reorganization bill. I have chafed for years about the other body violating the rules of this House by placing entirely foreign, extraneous, and nongermane matter on House-passed bills.

Now we have been hearing arguments about this bill not becoming law if it passes with this provision in it.

Since when—or is this part of the whole scheme—since when do we have to legislate and particularly make our rules in conformity with the wishes and desires of the other body?

They make whatever rules they see fit to make. Certainly, it is our privilege for us to do the same thing. So I am not persuaded by this argument that this bill will not become law if this provision remains in the bill.

I am not going to have the time, and you probably would not have the patience to go into detail about all of the instances in which the Senate has added nongermane amendments to House-passed bills. But how many times have you seen here in the last few years, and it is getting worse every year, that we pass a bill here and it goes over to the other body; only to come back with extraneous matter attached. It may be ever so innocuous or it may be ever so important. In the other body, they place something entirely extraneous and something entirely nongermane or something entirely foreign to the matter which the House passed and sent over there. Then, they send it back over here to us and we are forced to take it or we leave it.

Before I forget it, I want to address myself to the gentleman from Michigan (Mr. O'HARA) who asked a rather pertinent question a moment ago of the gentleman from Iowa (Mr. GROSS).

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

(Mr. COLMER asked and was given permission to proceed for 5 additional minutes.)

Mr. COLMER. Mr. Chairman, I thank the House and I thank the Chair.

I agree with the gentleman. Why two-thirds? The answer is very simple. As a practical matter, the answer is to try to retain this provision in the bill. If the bill provided for a simple provision subjecting the offending amendment to a point of order, I seriously doubt the House would agree.

I agree with the gentleman from Michigan that it ought to be just a simple majority vote. I would like to have it that way, and if the gentleman from Michigan would offer such an amendment, I would support it.

But getting back to some illustrations, I point out that the Ways and Means Committee is one of the most important committees in the House. They come in here with a bill which, under the Constitution of the United States, must originate in this body. First, they come to the Rules Committee, ask for a closed rule, and they usually get it, because it is traditional, under the leadership of both parties since I have been in the Congress, to get a closed rule on such bills.

So they come to the floor of the House. Incidentally, I point out that as a true liberal I have opposed closed rules. I am opposing one up there in the Rules Committee now. I have always opposed closed rules.

So what happens. The bill comes to the floor of the House. We debate the measure for 4 or 8 hours with no opportunity for amendment, germane or otherwise. The bill goes to the other body. They consider it for weeks or months, as the case may be. Any Member of that body is free to offer an amendment and talk at length upon any phase of the bill.

Mr. WHITTEN. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. Sixty-four Members are present,

not a quorum. The Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 297]

Abbitt	Edwards, La.	MacGregor
Adams	Erlenborn	Marsh
Anderson, Tenn.	Evins, Tenn.	Meeds
	Fallon	Meskill
Ashbrook	Feighan	Morse
Baring	Flynt	Murphy, Ill.
Barrett	Foreman	Murphy, N.Y.
Beall, Md.	Friedel	O'Neill, Mass.
Bell, Calif.	Fulton, Tenn.	Ottinger
Berry	Garmatz	Patman
Blanton	Gilbert	Pelly
Blatnik	Gray	Philbin
Boland	Hansen, Wash.	Podell
Brock	Harrington	Powell
Brooks	Harsha	Reifel
Brown, Calif.	Hastings	Rogers, Colo.
Burton, Utah	Hébert	Roudebush
Bush	Hicks	Roybal
Button	Hogan	St Germain
Cabell	Horton	Sandman
Clark	Jones, Tenn.	Scherle
Clausen, Don H.	Karth	Scheuer
	Keith	Schneebeli
Cohelan	King	Sebelius
Collins	Kleppe	Springer
Conte	Kluczynski	Staggers
Conyers	Landgrebe	Taft
Cowger	Landrum	Teague, Tex.
Daddario	Lloyd	Thompson, N.J.
Dawson	Lujan	Tunney
de la Garza	Lukens	Watson
Denney	McCarthy	Weicker
Diggs	McCulloch	Widnall
Dingell	McDade	Wilson, Charles H.
Donohue	McEwen	
Dorn	McMillan	Wold
Dowdy	Macdonald, Mass.	
Downing		

Accordingly the Committee rose; and the Speaker pro tempore (Mr. ALBERT) having resumed the chair, Mr. NATCHER, Chairman of the Committee of the Whole House on the State of the Union, reported that the Committee, having had under consideration the bill H.R. 17654, and finding itself without a quorum, he had directed the roll to be called, when 321 Members responded to their names, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The Committee resumed its sitting.

The CHAIRMAN. The gentleman from Mississippi (Mr. COLMER) has 2 minutes remaining.

(By unanimous consent, Mr. COLMER was allowed to proceed for 3 additional minutes.)

Mr. COLMER. Mr. President, when we were interrupted with the quorum call, I was attempting to illustrate some of the inequities of the present rules. I want to call to the attention of the House just briefly one example, because we do not have time to go into all of the examples. One of the latest examples was when the House passed a simple bill here, dealing with a minor matter, and the Senate struck everything out of the House bill except the number and inserted an entirely foreign matter. The House bill was one dealing with the importation of wild animals.

Mr. Chairman, I repeat that bill dealt with the importation of wild animals. In the other body they struck everything but the number of that bill and substituted the importation of beef from foreign countries. That is one illustration.

There was another which the gentleman from New York (Mr. CELLER) was very much interested in. It was a minor bill, and the Senate bypassed the House. The gentleman from New York (Mr. CELLER) will comment on that later, I am sure.

The last two bills that the House passed dealing with revenue matters—and that is something which the Constitution provides should exclusively originate in the House—were entirely rewritten, and many foreign provisions were put in those bills, such as textile quotas, surtax, expenditure limitation giving the Executive authority to set priorities, and an exemption for 5 years from taxation on certain other matters. All of this was foreign.

What does all this do? I am not going to attempt to go into these details further. What does it do? When they do that, it bypasses the committees of the House. We have no opportunity for committee consideration. We are called upon to vote it up or vote it down.

I must mention one other, because it is fresh in our minds. It was the 18-year-old provision, written into one of the civil rights bills by the Senate. That had no connection whatever with the bill under consideration as passed by the House. What was the result? It came back here with this nongermane amendment, and you and I were called upon and had to vote on the question of the inclusion of the 18-year-olds, a very doubtful constitutional provision, without 1 minute of consideration by the appropriate committee or for that matter with very little debate.

When you went home, if you voted against that because of conscientious scruples and observing the Constitution as you interpreted it, you were charged with voting against the 18-year-olds. You had no opportunity whatever to pass upon the 18-year-old amendment separately from the civil rights provision. It was a question of taking the whole package or nothing.

What are we proposing to do here? Your committee, in order to avoid this unwise legislative procedure, in order to try to restore to this House some semblance of the stature and recognition it deserves, is simply saying that if an amendment is placed upon a House-passed bill by the other body, if that amendment were not germane under the House rules, when it comes back here in conference.

The CHAIRMAN. The time of the gentleman from Mississippi has again expired.

(By unanimous consent, Mr. COLMER was allowed to proceed for 2 additional minutes.)

Mr. COLMER. When it comes back here with that extraneous, nongermane amendment any Member of this House can demand a separate vote. He does not have to be a member of the committee. Any Member can do it. We are not shutting it off entirely, but it requires a two-thirds vote to adopt that extraneous amendment. We would still not have the committee consideration that we ordinarily have, but this is just a step to give this House an opportunity to debate the nongermane provision for 40 minutes and have a separate vote thereon.

Now, just finally, Mr. Chairman, rule XX of the House up until 1966 simply provided that any amendment of the Senate to any House bill shall be subject to the point of order that it shall first be considered in the Committee of the Whole House on the State of the Union if originating in the House it would be subject to that point of order. That was the rule up until 1966. That had been the rule since 1789, if I recall the date correctly. However, it was amended in 1966 so that the present procedure now prevails.

I repeat for 15 years I have tried to do something about this, and I say to those who say it ought to be done differently that I have tried as a member of the Committee on Rules to do something about it differently by a simple resolution, and I have failed. So here it is in this reorganization bill, and I ask you to pass it.

Mr. CELLER. Mr. Chairman, I oppose the amendment.

I will say to the Members of the House that it is high time that we assert ourselves and we say to the other body that it is time we insist upon our own rules.

The other body, in a sort of alleged rarefied atmosphere, shall no longer have the right to add on to our bills nongermane amendments. They look upon us from their Olympian heights as mere mundane characters and they do not give a tinker's dam about our own rules.

Now, we have rules. Those rules should be obeyed. We have to be either men or we are going to be mice. We have to stand up to this other body and say that if you want to amend, then amend according to the rules. If you want to amend according to the rules of your house, fine, but when it comes to this body, we have rules and we ought to abide by those rules. And you must abide by them.

Here we have situations where insignificant bills are sent to the other body and they add onto them highly important provisions and expect us to swallow willy nilly those highly important provisions. In a sense, they seek to ram them down our throats. We must put a stop to this unfair practice.

Let me give you an illustration. The gentleman from Mississippi (Mr. COLMER) mentioned one situation. We passed a very insignificant revenue bill. In the Senate, in their attempt to force the issue in the House, they tagged onto that insignificant revenue bill a provision immunizing the National and the American Football Leagues from the operations of the antitrust laws.

They knew that the Committee on the Judiciary, of which I am chairman, was opposed to granting any immunity from the antitrust laws to this football combination, which was an abominable combination, and so to skirt around the Committee on the Judiciary they attached to this unimportant Revenue bill an amendment, really in the form of a new bill, endorsing immunization of the football combination from antitrust laws. It did not go to the Judiciary Committee, instead it went to the Committee on Ways and Means, since they had jurdisdiction of the House Revenue passed bill. All we had as an opportunity to fight that combination, that unholy

merger, was an hour's debate by way of consideration of a conference report. There was no opportunity for any committee to consider the matter of immunization from the antitrust laws, no referral to a committee. We were told to take it or leave it with only an hour's debate.

Now there were some Members who wanted that Internal Revenue statute, insignificant though it was, but in order to get that they had to swallow the bigger proposition, namely the immunization from the antitrust laws of the football combination.

Recently we had a situation where we provided for an extension of the Voting Rights Act of 1965. We labored long and assiduously to get that bill out. It went over to the other body. What did they do? They tagged onto it something utterly irrelevant which had no relation to the Voting Rights Act of 1965, namely the lowering of the voting age. You tell me what relation one has with the other? None whatsoever. It came over here and I as chairman of the Committee on the Judiciary, was sorely put to it because I was very anxious to get the extension of the Voting Rights Act of 1965. But in order to do that I had to accept the lowering of the voting age bill which I opposed. And many other Members were in the same position that I was in. We had no hearing on the lowering of the voting age bill, important and far reaching as that proposal was. There was no reference of it to a committee, it just came to us from out of the blue, as it were, and we had to accept or reject it. And this was a nongermane amendment placed upon a House bill.

Now do you think that is right? I think that is probably wrong and we should stop it. The proposal is not completely the way I want it but I want some provision against germaneness.

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent, Mr. CELLER was allowed to proceed for 3 additional minutes.)

Mr. CELLER. If 60 percent of the Members want to consider the provision that is a fair indication that the House wants something of that nature.

For that reason I think it is high time that we, shall we say, strike a blow for liberty? I hate like blazes to use that hackneyed expression, but it is compelling.

You know it was Speaker Reed, speaking of the Senate once who said:

> You know, I had a dream the other night and I dreamt that the President was elected and chosen by the Members of the Senate, and the Chief Justice of the United States was to count the ballots.

So they had the election, according to this dream of Speaker Reed, and the Chief Justice counted the ballots and he made this announcement, "Each Senator got one vote."

Now that is about the size of it over there.

When you get over to that body, you get a sort of feeling that you are in a charged atmosphere, and you can do everything and anything that you want to do. I do not think they should have this right. It is about time that we saw to it that they shall cease placing nongermane amendments on House bills. I do hope the amendment offered by the distinguished gentleman from Florida is not considered favorably.

I am sorry that I have to speak in this position. I think it was Lord Stillwell in the House of Lords who came in one day and said:

> I do not feel very well.

And he started to address the House of Lords while he was seated. Somebody made a point of order that he had no right to speak while he was seated. Lord Stillwell in high dudgeon said:

> If I cannot speak standing, I shall speak sitting—and if I cannot speak sitting, I shall speak lying.

And they all said:

> Which he will do in either event.

So forgive my being in this position to speak to you. But I do hope the Gibbons amendment will not survive.

The CHAIRMAN. For what purpose does the gentleman from Missouri (Mr. BOLLING), a member of the committee, rise?

Mr. BOLLING. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I hesitate to rise immediately after two of the distinguished chairmen of the House, my own chairman, the chairman of the Committee on Rules and the chairman of the Committee on the Judiciary, with whom I have had the privilege of working on many occasions.

But I did reserve the right in the subcommittee and in the full committee to oppose the amendment of the gentleman from Mississippi (Mr. COLMER) which is now a part of the bill. I strongly support the Gibbons amendment.

The fact of the matter is that no matter how often one says that we are not interfering with the Senate, the Colmer provision does interfere with the rights of the Senate.

The Constitution is very explicit in its view on the subject, which rises in connection with one of the very important prerogatives of the House.

The Constitution says:

> All bills for raising revenue shall originate in the House of Representatives, but the Senate may propose or concur with amendments as on other bills.

Now very clearly in a bicameral legislature, one House cannot tell the other House what it can do. One House cannot tell the other House that its amendments are going to be subjected to a particular method of treatment.

Now this House has no problem in turning down any Senate amendment, anytime it wants to. All it has to do is to vote down the bill in which the Senate amendment comes—in other words vote down the conference report.

It just happens that this subject has been a matter of controversy from the beginning of time so far as the history of the House and the Senate is concerned. Quite naturally, the Senate is going to be jealous of its procedures just as we are and should be, jealous of our procedures. But I think it is quite clear that any provision that puts a special rule on the treatment of any Senate amendment is in conflict with the intent of the Constitution. Furthermore, anybody who knows anything about the attitude of the Senate toward this right knows that it is a fact that no reorganization act containing the so-called Colmer Provision can become law.

So if we want to follow good procedure, from the point of view of the House and from the point of view of one body in a two-body legislature, we should vote for the Gibbons amendment, and if we really care about a reorganization bill becoming law, we should vote for the Gibbons amendment. We should very clearly make it our policy to defend the integrity of our institution and not interfere with the integrity of the U.S. Senate.

Mr. DELLENBACK. Mr. Chairman, I move to strike the necessary number of words.

The CHAIRMAN. The gentleman from Oregon is recognized for 5 minutes.

(Mr. DELLENBACK asked and was given permission to revise and extend his remarks.)

Mr. DELLENBACK. Mr. Chairman, part of the strength of what we have done with this measure so far is that we have made no attempt to interfere with what the other body may do. Time after time the chairman of the subcommittee has requested that we dispense with reading those sections that deal with what the other body may or may not do, and we have confined our deliberations to what the House may do. It is literally true, as the chairman of the subcommittee said earlier, that this particular provision we are now debating deals with the rules of the House. Of course, we should be and are able to amend the rules of the House. But let us not be blind, as we look at that which is technically accurate and forget the fact—let us not be blind to the fact—that in its impact, what we do or do not do on this particular proposal will, as the gentleman who has immediately preceded me in the well has pointed out very clearly, be dealing with what the other body may or may not do.

Some of us may feel very strongly—and I confess I am one of those who do—that the substance of this particular provision now in this measure is a good provision. Personally I feel strongly that I would like to see us with some tool within our own procedures that would permit us to put some brake on what the other body may do on nongermane amendments. But I think it is fundamentally true that this is not the time and this is not the place and this is not the way to seek to amend what has been done for many years on this particular point. If we insist on leaving in this bill this particular provision instead of supporting the Gibbons amendment and taking it out, I think we lay to rest the last chance of this 91st Congress to bring about effective congressional reform. It may be that the other body will not act on this measure even if we do act thereon. But let us not mistake the fact that if we leave this provision within this bill—because the other body will see very

clearly that this provision does have an impact on what it may do—that we have killed any chance for effective reform this session.

If we want to make this change, we can make the change without needing to call the other body into conference at the time we adopt our own rules, and I think it is clear that when we go to adopt the rules for the 92d Congress, some such provision as this will be adopted, and I personally hope that it will be adopted. But we make a grievous mistake, my friends and my colleagues, if we do not see clearly what we are doing. Unless we support the Gibbons amendment, as I urge we do, we do grievous injury today to the chance for effective reform coming forth from the 91st Congress.

I yield back the remainder of my time.

AMENDMENT OFFERED BY MR. O'HARA

Mr. O'HARA. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. O'HARA: On page 41, strike out line 1 through line 23 and insert the following:

"Motions in the House to Dispose of Nongermane Amendments Between the Two Houses to House or Senate Bills or Resolutions.

"SEC. 120. (a) Clause 1 of rule XX is amended by adding, after the period, the following new sentence: 'Such a motion and any other motion, rule, or order to dispose of amendments between the two Houses to any House or Senate bill or resolution other than a motion to request or agree to a conference shall require for adoption, or demand of any Member, a separate vote on each amendment to be disposed of if, originating in the House, such amendment would be subject to a point of order on a question of germaneness under clause 7 of rule XVI. Before such separate vote is taken, it shall be in order to debate such amendment for forty minutes, one-half of such time to be given to debate in favor of, and one-half to debate in opposition to, the amendment.'

"(b) Rule XX is amended by adding at the end thereof:

" '3. No amendment of the Senate which would be in violation of the provisions of clause 7 of rule XVI, if said amendment had been offered in the House, shall be agreed to by the managers on the part of the House unless specific authority to agree to such amendment shall be first given by the House by a separate vote on every such amendment.' "

Mr. O'HARA. Mr. Chairman, this amendment, in effect, substitutes majority vote for a two-thirds vote. It applies the same rules to nongermane Senate amendments to legislative bills that are followed today and have been followed for many years with respect to amendments to appropriation bills that carry legislation.

I am sure all Members recall that from time to time we have an appropriation bill conference report, on which we will agree first to the conference report and then we will also have one or more amendments in disagreement on which we will then vote as separate propositions. Usually the conferees have worked out these amendments in disagreement in a way that permits their disposition without any great controversy, but sometimes there is considerable controversy and we do have a separate vote on which a rollcall can be demanded, as on any other vote, and we have an hour of debate.

My amendment would follow that time-tested procedure for nongermane Senate amendments to the House bills, Conferees could not bring in a nongermane amendment as part of a conference report. They would have to bring it in as an amendment in disagreement with a motion to dispose of it, perhaps with an amendment to concur, to disagree, or to agree with an amendment, and then we would bebate that motion.

With respect to the kind of situation that two earlier speakers described, with respect to the situation where we do not have a conference report, but instead have a resolution from the Rules Committee, as with the 18-year-old vote on the Voting Rights Act, there we would have a separate vote if anyone desired it on the nongermane part of that combined piece of legislation.

The gentleman from Mississippi (Mr. COLMER) when he spoke, said that a majority vote was acceptable, although he favored the bill as it was, every word of it. The gentleman from New York, when he spoke, mentioned that he favored a separate House vote, but not necessarily by a two-thirds margin, in order to adopt a nongermane Senate provision.

With respect to the constitutional argument made by the gentleman from Missouri, it seems to me that we do have a chance of finally passing this legislation while at the same time upholding the dignity of the House if, instead of introducing a new concept—barring a Senate amendment that would not be germane under House rules without getting the concurrence of two thirds of the House—we simply apply to nongermane amendments from the Senate to legislative bills the same principle we have been applying for many years to legislation on appropriations. I cannot believe that the Senate would find this new or offensive or strange.

So it seems to me that this is something that liberals and conservatives—all of us—can agree on, that the House should have a separate majority vote on a nongermane Senate amendment.

Mr. EVANS of Colorado. Mr. Chairman, will the gentleman yield?

Mr. O'HARA. I yield to the gentleman from Colorado.

Mr. EVANS of Colorado. On that point, let us assume that such an amendment is before the House. Under the provisions of the gentleman's amendment, would a separate vote be secured by the request of any one Member?

Mr. O'HARA. A separate vote could be had. It would have to be had under the rules of the House, and any one Member could make a point of order that would bring about such a vote. It would not be a record vote necessarily. Record votes could be produced however in the same way they are now produced. But a separate vote could be produced by any one Member making a point of order, if the Chair had failed to put the question separately on a nongermane Senate amendment.

Mr. EVANS of Colorado. In other words, a Member wishing a separate vote would have to make a point of order against a certain provision in the bill being considered.

Mr. O'HARA. That is right.

Mr. EVANS of Colorado. On the point that it was nongermane. If upheld by the Chair, that it was nongermane, then he would have the right to request a separate vote on that matter; is that correct?

Mr. O'HARA. That is correct. It would work somewhat differently in the case of a conference report. That is why the amendment is in two parts, A and B.

If one tried to bring in a conference report that had a nongermane provision within it, rather than as a separate amendment in disagreement, I believe the entire conference report would be subject to a point of order and could be sent back to the conference. It might then come back with the nongermane provision of the conference report taken out and brought back separately as an amendment in disagreement.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

(On request of Mr. COLMER, and by unanimous consent, Mr. O'HARA was allowed to proceed for 3 additional minutes.)

Mr. COLMER. Mr. Chairman, will the gentleman yield?

Mr. O'HARA. I yield to the gentleman from Mississippi.

Mr. COLMER. I should like to ask the gentleman from Michigan if it is his understanding of his amendment that the only substantial difference between the language in the bill and the language in his amendment is that the bill would require a two-thirds vote and the amendment offered by the gentleman would require only a majority vote?

Mr. O'HARA. Precisely.

Mr. COLMER. Otherwise it is substantially and basically the language in the bill?

Mr. O'HARA. Yes, with the necessary changes to conform it to the framework of the rules. But that is its meaning; there is no question about it, Mr. Chairman.

Mr. SISK. Mr. Chairman, will the gentleman yield?

Mr. O'HARA. I yield to the gentleman from California.

Mr. SISK. In line with the gentleman's answer to the distinguished chairman of the Committee on Rules, the gentleman from Mississippi, I am inclined to go along and support the gentleman's amendment. I should like to say that the committee worked at considerable length, and the two-thirds vote came about as a matter of using more or less the suspension idea of 40 minutes of debate and tying it in with a two-thirds vote, on the basis that if it were a matter of substantive importance to the House then probably two-thirds would be willing to accept it anyway.

I can speak only for myself and not for the committee. I would be inclined to accept the majority vote, because at least it is a step in the right direction.

Mr. O'HARA. I thank the gentleman.

Mr. CELLER. Mr. Chairman, will the gentleman yield?

Mr. O'HARA. I yield to the gentleman from New York.

Mr. CELLER. I am in accord with the views just expressed by the gentleman from Mississippi and by the gentleman from California, and I certainly would accept the suggestion just made in the form of the amendment.

Mr. O'HARA. I very much appreciate the support of the gentleman from New York, the distinguished dean of the House.

Mr. COLMER. Mr. Chairman, will the gentleman yield further?

Mr. O'HARA. I yield further to the gentleman from Mississippi.

Mr. COLMER. If the gentleman will recall, I said in my original statement that I was inclined to go along with his amendment for the majority vote, and I want to repeat that now. I believe it is an admirable way to resolve this issue, and certainly we have made progress.

Mr. O'HARA. I want to thank the gentleman.

Mr. GIBBONS. Mr. Chairman, will the gentleman yield?

Mr. O'HARA. I am glad to yield to the gentleman.

Mr. GIBBONS. As the author of the original amendment—and I do not want to get hit in the head with the entire ceiling falling on me here—I would much rather have the original amendment, but I see the magic wheels of compromise working here. I think that the gentleman came up with a good amendment and I intend to support it and I will support it.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Michigan (Mr. O'HARA).

The amendment was agreed to.

The CHAIRMAN. Are there additional amendments?

PARLIAMENTARY INQUIRY

Mr. BINGHAM. A parliamentary inquiry, Mr. Chairman. Is an amendment now in order to any point in title I? I have an amendment that comes on page 47.

The CHAIRMAN. The Chair would like to inform the gentleman we have not reached that point yet.

Are there additional amendments?

Mr. HALL. Mr. Chairman, a parliamentary inquiry. Have we voted on the amendment offered by the gentleman from Florida (Mr. GIBBONS)?

The CHAIRMAN. The Chair would like to inform the gentleman from Missouri that since the amendment to strike and insert of the gentleman from Michigan (Mr. O'HARA) was adopted, that means that the amendment offered by the gentleman from Florida (Mr. GIBBONS) the motion to strike, that is, falls as a result of the adoption of the first amendment.

Are there additional amendments at this time? If not, the Clerk will read.

The Clerk read as follows:

READING OF THE JOURNAL OF THE HOUSE

SEC. 121. Clause 1 of rule I of the Rules of the House of Representatives is amended—

(1) by striking out "at the last sitting, immediately call" and inserting in lieu thereof "at the last sitting and immediately call"; and

(2) by striking out ", and on the appearance of a quorum, cause the Journal of the proceedings of the last day's sitting to be read, having previously examined and approved the same." and inserting in lieu thereof a period and the following: "On the appearance of a quorum, the Speaker, having examined the Journal of the proceedings of the last day's sitting and approved the same, shall announce to the House his approval of the Journal; whereupon, unless the Speaker, in his discretion, orders the reading of the Journal, the Journal shall be considered as read. However, it shall then be in order to offer one motion that the Journal be read and such motion is of the highest privilege and shall be determined without debate.".

Mr. SISK (during the reading of the section). Mr. Chairman, I ask unanimous consent that section 121 be considered as read, printed in the RECORD at this point, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

The CHAIRMAN. Are there any amendments?

AMENDMENT OFFERED BY MR. HALL

Mr. HALL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. HALL: On page 42, strike lines 1 through 20.

The CHAIRMAN. The gentleman from Missouri is recognized for 5 minutes in support of his amendment.

Mr. HALL. Mr. Chairman, the subcommittee of our Committee on Rules feels that some delays in the past in the House as they dealt with the reading of the Journal were unnecessary. The bill as presented to us amends clause 1 of rule I to modify the right of any individual elected representative Member of the Congress to demand that the Journal of the proceedings of the last day's sitting be read in full. The bill further provides that the Speaker, the Speaker alone, as the duly elected representative, elected to this high estate by the Members hereof, shall announce his approval of the Journal and it then shall not be read unless the Speaker so orders or unless a motion is made and supported by a majority to read the Journal in full, and such motion, furthermore, will not be debatable.

I have submitted my amendment, Mr. Chairman, because I believe this does mischief to the Constitution. Certainly it does mischief to the official RECORD of the House of Representatives, our House of Representatives, and the other body.

I ask you, Mr. Chairman, how could a Member correct the Journal? What access would the individually elected Member have to the Journal if he thinks or even so much as fears an error in the recording thereof?

Second, Mr. Chairman, one never knows but there might be something of interest in the Journal, and the House of Representatives would be a better institution by again receiving this information.

Third, the provision in the bill eliminates the rights of a minority to protect itself against an oppressive and overwhelming majority. I think this is important. I believe that our Founding Fathers in their wisdom, who developed these principles that have oft been tried and found true, would approve of protecting this minority.

Finally, the proposal takes away the right and the prerogative of individually elected Members of the House of Representatives. And I ask you, Mr. Chairman, why should not a Member have the right to demand the reading of the Journal? Why should we give more power to the Speaker alone?

The new language in the bill starts "On the appearance of a quorum the Speaker shall." It is therefore mandatory—and is the Speaker to automatically cause the Clerk to have a quorum call before he announces that he has perused the Journal and found it adequate and a true report? This is the official record according to the Constitution which says that each House shall keep a Journal of its proceedings and from time to time publish the same excepting such parts as may in their judgment require secrecy.

I strongly urge this amendment and the preservation of the individual rights of the elected Members of the House.

I yield back the balance of my time.

Mr. SISK. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I have great respect for the gentleman from Missouri and I must say that I am somewhat sympathetic with the statements the gentleman made. However many of us have experienced the dilatory tactics that can be used in connection with this device by one single Member demanding that the Journal be read. We have had cases where that reading went on all afternoon, or as I remember it did, on one occasion.

As one who firmly believes in the rights and the protection of the minority—and I think the rules of the House go a long way in doing that, and we are still here providing for a democratic procedure and of course for a rule by the majority, because any Member who once the Speaker having examined the Journal and approved it, any Member has the right to rise and make a motion that it be read and that motion shall be of the highest privilege and shall be determined without debate. We provide again for the will of the majority to prevail. It is simply the position of the Committee on Rules that this eliminates what has been a dilatory tactic which has been used at times by one or two or three or four Members—and this is not being critical of those Members, but basically it is in the interest of taking care of the public business that the will of the majority should prevail in connection with this.

That is what the subcommittee and the full Committee on Rules recommend, and therefore, Mr. Chairman, I would oppose the amendment offered by the gentleman from Missouri (Mr. HALL).

Mr. GROSS. Mr. Chairman, I move to strike out the last word.

(Mr. GROSS asked and was given permission to revise and extend his remarks.)

Mr. GROSS. Mr. Chairman, I am surprised that my friend, the gentleman

from California, describes as democratic procedure what is here proposed. I quote the language, "Unless the Speaker in his discretion orders the reading of the Journal."

This is placing in the hands of one man, the Speaker—the untrammeled authority to say whether the Journal shall or shall not be read.

I am not going to repeat the arguments made by my friend, the gentleman from Missouri, but certainly this is placing altogether too much power, in the hands of one man—the Speaker of the House of Representatives.

Mr. SISK. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield to the gentleman.

Mr. SISK. Of course, I recognize that that does place a certain power in the hands of the Speaker. However, my colleague, the gentleman from Iowa, will agree that it would still give him or me or any other individual Member the right of appeal from the Speaker's ruling on the requiring of the reading of the Journal, if a majority voted to support that decision.

Mr. GROSS. Yes, and how many times in the rather lengthy service of the gentleman from California has he heard an appeal from a ruling of the Chair?

Mr. SISK. I do recall, as I remember one occasion, of an appeal from a ruling of the Chair.

Mr. GROSS. I do not recall any.

Mr. SISK. I would agree with the gentleman that it is quite a rare incident. Yet, here is a situation where if there should be need for the reading of the Journal, and I think that is the only occasion on which it should be justified, because, as the gentleman knows, it can be a very lengthy process and has generally been used, frankly, for a delaying tactic. I believe my colleague will agree with me on that.

Mr. GROSS. Let me ask the gentleman on that score—when was the last demand for the reading of the Journal? I cannot even recall that. I know there have been requests during my time here for a reading of the Journal but it has been used only rarely in the last 20 years.

Mr. SISK. I recognize that it has only occurred occasionally. However, it has occurred, as I am sure my friend remembers, and I would say probably it was 8 or 9 years ago it was used several times. Again, I am not condemning the Member who asked for it because he was doing that which he, in his conscience, believed to be in the best interest of the people he represented.

As the gentleman knows, it was used on several occasions in connection with the civil rights bill and at certain times on very controversial legislation.

Again, as I say, it can be used merely as a dilatory practice by a single Member, and that is what we preclude.

Mr. GROSS. Yes; it can be used as a dilatory tactic. There are other moves that can be made as a dilatory tactic but are not commonly used.

I would say this to the gentleman. I doubt that he here today wants to throw the baby out with the bath water in this regard. I hope the House will not place in the hands of the Speaker—and I say again—any Speaker, the discretion, as it is given to him in this case, to order the reading of the Journal.

Mr. Chairman, I trust the House will support the amendment of the gentleman from Missouri to strike out the provision from the bill that gives to the Speaker power that ought to be held by all Members of the House, especially the members of the minority.

I hope the amendment will be adopted.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Missouri (Mr. HALL).

The question was taken; and on a division (demanded by Mr. HALL) there were—ayes 12, noes 25.

So the amendment was rejected.

Mr. HALL. Mr. Chairman, I demand tellers.

Tellers were refused.

So the amendment was rejected.

The CHAIRMAN. Are there additional amendments to section 121? If not, the Clerk will read.

The Clerk read as follows:

CLARIFICATION OF CERTAIN PROVISIONS AND ELIMINATION OF OBSOLETE LANGUAGE IN CERTAIN HOUSE RULES

SEC. 122. (a) Clause 27(a) of Rule XI of the Rules of the House of Representatives is amended to read as follows:

"(a) The Rules of the House are the rules of its committees and subcommittes so far as applicable, except that a motion to recess from day to day is a motion of high privilege in communities and subcommittees. Any committee may adopt additional written rules not inconsistent with the Rules of the House and those additional rules shall be binding on each subcommittee of that committee. Each subcommittee of a committee is a part of that committee and is subject to the authority and direction of that committee.".

(b) Rule XII of the Rules of the House of Representatives is amended to read as follows:

"RULE XII.

"RESIDENT COMMISSIONER

"The Resident Commissioner to the United States from Puerto Rico shall be elected to serve as an additional member on the Committees on Agriculture, Armed Services, and Interior and Insular Affairs, shall possess in such committees the same powers and privileges as in the House, and may make any motion except a motion to reconsider.".

(c) Clause 3 of Rule III of the Rules of the House of Representatives is amended—

(1) by striking out "to Members and Delegates" and inserting in lieu thereof "to Members and the Resident Commissioner from Puerto Rico";

(2) by striking out "Members and officers" and inserting in lieu thereof "Members, the Resident Commissioner from Puerto Rico, and officers";

(3) by striking out "and Territory";

(4) by striking out "preserve for and deliver or mail to each Member and Delegate an extra copy, in good binding, of all documents printed by order of either House of the Congress to which he belonged;" and inserting in lieu thereof "deliver or mail to any Member or the Resident Commissioner from Puerto Rico an extra copy, in binding of good quality, of each document requested by that Member or the Resident Commissioner which has been printed, by order of either House of the Congress, in any Congress in which he served;"; and

(5) by striking out "of Members and Delegates" and inserting in lieu thereof "of Members and the Resident Commissioner from Puerto Rico".

(d) Clause 1 of Rule IV of the Rules of the House of Representatives is amended by striking out "of Members and Delegates" and inserting in lieu thereof "of Members and the Resident Commissioner from Puerto Rico".

(e)(1) Clause 2 of Rule V of the Rules of the House of Representatives is repealed.

(2) Clause 3 of Rule V of the Rules of the House of Representatives is redesignated as clause 2 of that Rule.

(f) Rule VI of the Rules of the House of Representatives is amended to read as follows:

"RULE VI.

"DUTIES OF THE POSTMASTER

"The Postmaster shall superintend the post office in the Capitol and in the respective office buildings of the House for the accommodation of Representatives, the Resident Commissioner from Puerto Rico, and officers of the House and shall be held responsible for the prompt and safe delivery of their mail.".

(g) Clause 9 of Rule XI of the Rules of the House of Representatives is amended by striking out "clause 15(d)" wherever occurring therein and inserting in lieu thereof "clause 16(d)".

(h) Clause 23 of Rule XI of the Rules of the House of Representatives is amended—

(1) by striking out "paragraph 7" and inserting in lieu thereof "clause 7"; and

(2) by striking out "paragraph 4" and inserting in lieu thereof "clause 4".

(i) Clause 25 of Rule XI of the Rules of the House of Representatives is amended to read as follows:

"25. The Committee on House Administration shall make final report to the House in each contested-election case at such time as the committee considers practicable in that Congress to which the contestee is elected.".

(j) Clause 27(j) of Rule XI of the Rules of the House of Representatives is amended by striking out "paragraph 27 of Rule XI of the House of Representatives" and inserting in lieu thereof "this clause of this Rule".

(k) Clause 29(c) of Rule XI of the Rules of the House of Representatives is amended by striking out "maximum rate authorized by the Classification Act of 1949, as amended", wherever occurring therein, and inserting in lieu thereof "highest rate of basic pay, as in effect from time to time, of the General Schedule of section 5332(a) of title 5, United States Code".

(l) Clause 7 of Rule XXIV of the Rules of the House of Representatives is amended by striking out "paragraph 4" and inserting in lieu thereof "clause 4".

(m) Clause 2 of Rule XXXIV of the Rules of the House of Representatives is amended by striking out ", one to the International News Service, and one to the United Press Associations," and inserting in lieu thereof "and one to United Press International".

(n) Clause 2 of Rule XXXVI of the Rules of the House of Representatives is amended—

(1) by striking out "National Archives" and inserting in lieu thereof "General Services Administration"; and

(2) by striking out ", and in so transferring he may act jointly with the Secretary of the Senate." and inserting in lieu thereof a period and the following: "In making the transfer, the Clerk may act jointly with the Secretary of the Senate.".

Mr. SISK (during the reading). Mr. Chairman, I ask unanimous consent that section 122 be considered as read, printed in the RECORD, and open for amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

The CHAIRMAN. Are there amendments to section 122?

AMENDMENT OFFERED BY MR. SISK

Mr. SISK. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. SISK: On page 46, after line 21, add the following:

"(n) Clause 3 of Rule XXXIV of the Rules of the House of Representatives is amended—

"(1) by striking out "wireless" and inserting in lieu thereof "television";

"(2) by striking out 'standing Committee of Radio Reporters' and inserting in lieu thereof 'Executive Committee of the Radio and Television Correspondents' Galleries'; and

"(3) by striking out 'Transradio Press Service' and inserting in lieu thereof 'American Broadcasting Company'."

And on page 46, line 22, strike "(n)" and insert in lieu thereof "(o)".

The CHAIRMAN. The gentleman from California (Mr. SISK) is recognized for 5 minutes in support of his amendment.

Mr. SISK. Mr. Chairman, unless there are questions, I certainly shall not take the 5 minutes. I think it is evident from the reading of the amendment that this would eliminate some obsolete language, or language that was correct many years ago but today is obsolete, and it would update the rules in connection with the television and radio sections of clause 3 of rule XXXIV. I ask for the adoption of the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California (Mr. SISK).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. CÓRDOVA

Mr. CÓRDOVA. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. CÓRDOVA: On page 43, strike lines 10 through 19 and insert the following:

"(b) Rule XII of the Rules of the House of Representatives is amended to read as follows:

"'RULE XII.

"'Resident Commissioner

"'The Resident Commissioner to the United States from Puerto Rico shall be elected to serve on standing committees in the same manner as Members of the House and shall possess in such committees the same powers and privileges as the other Members'."

Mr. CÓRDOVA. Mr. Chairman, under the existing rule and under the provisions of the bill we are considering, the Resident Commissioner enjoys the privilege of being an "additional member" of three standing committees: Agriculture, Armed Services, and Interior and Insular Affairs.

My amendment would abolish this privilege. It would provide for the election of the Resident Commissioner to standing committees in the same manner as Members of the House are elected. This would mean, in effect, that the Resident Commissioner may be fortunate to secure election to one of the three committees on which he now serves.

But my amendment would also provide that the Resident Commissioner have the same rights in committee as other members, which means, of course, that he would have the right to vote within the committee.

This proposition is not new. Back in 1841, we know that delegates voted on the business before standing committees. And because someone has suggested that it may not be constitutional for a delegate to vote in committee, I shall quote briefly from the report of the Committee on Elections regarding the qualifications of the delegates from Florida:

With the single exception of voting, the Delegate enjoys every other privilege and exercises every other right of a Representative. He can act as a member of a standing or special committee, and *vote on the business before said committee,* and he may thus exercise an important influence on those initiatory proceedings by which business is prepared for the action of the House. (Hind's Precedents, Section 1301).

It is apparent that in permitting the Delegates to vote over a century ago, this House drew a distinction between the action of the House, which can be taken only by its Members, and the steps taken in preparation for action by the House, wherein persons other than Members of the House may, and often do, play very vital roles. I submit this is a clearly valid distinction. And in support of this distinction, I take the liberty of quoting the ringing phrases of the distinguished gentleman from Missouri (Mr. BOLLING) during an earlier phase of the debate on this measure:

Only the House of Representatives, under the Constitution of the United States, can act . . . A great deal of the preliminary work of the Congress is and must be done in committee, but the committees are the creatures of the House; they are not little separate legislative bodies.

I might cite an analogy. Only the States and the District of Columbia are represented in the electoral college which chooses our President. But in the essential preliminary work of choosing the candidates of the two great parties, in the national conventions, delegates from Puerto Rico participate and vote. No one, however critical of our convention system with all its defects, has yet suggested that it is unconstitutional because of the Puerto Rican votes.

Some of you have asked me whether the right to vote in committee is worth giving up the present privilege of the Resident Commissioner of sitting on the three committees to which he is assigned.

It is true that the Resident Commissioner now has the privileges, in committee, as on the floor, to sit, to speak, and to question. Undoubtedly these are valuable privileges, just as it is a valuable privilege to be counsel to a prominent committee, and as such to sit, to question, perhaps to speak—as well as to advise the committee. But such privileges fall short of the true role of an elected representative of the people in a republican form of government.

Let us not delude ourselves. The Resident Commissioner is now an "additional member" of three great committees under rule XII precisely because he is "additional," precisely because he is not counted. You will, therefore, appreciate why the Resident Commissioner, as the elected representative of 2,700,000 citizens cannot forgo the opportunity to put to this House the question whether or not it is ready, whether or not its Members are ready, to go as far as in my judgment you are clearly empowered to go, to make the role of the Resident Commissioner in Congress more meaningful, more useful to his constituents, more in keeping with the intended nature of the position for which he is elected.

This House and its presiding officers have traditionally been liberal in dealing with the rights and privileges of delegates. For instance, in 1849, Speaker Robert C. Winthrop sustained the right of the Delegate from Wisconsin to move to suspend the rules and then to move to discharge, saying:

The Chair believes, upon the whole, that delegates from the Territories could not subserve the purposes for which they are sent here unless they have the right to make motions; and as the law does not deny them that right, the Chair is disposed to accord to them the largest liberty.

Eighty years later, the Chairman of the Whole House sustained the right of a Delegate to make a point of order, and also to object to the consideration of a bill stating:

Upon the general principles that the prohibition of one particular right permits other rights and the inclusion of one matter excludes all others, it seems to the Chair that there is no good reason for holding that the Delegates may not make a point of order, when as a matter of fact he may participate in all other parliamentary procedures.

But there is undoubtedly a specter haunting the minds of many in this Chamber as you consider my amendment: the specter of other possible Delegates. It haunts those who favor the granting of representation to other communities, some of whom have expressed to me their concern lest the broadening of the privileges of the Resident Commissioner may render more difficult their efforts to obtain representation for these other communities. And it probably haunts those who hesitate to grant representation to one or more of these communities.

I wish I could dispose of this specter by saying that Puerto Rico is different, that the Resident Commissioner represents almost 3 million people, that their situation is entirely different. But I cannot in all candor put to you distinctions in which I do not believe. What I can say, what I feel I must say to you, is that if there must be an issue as to whether or not representation in Congress should be granted to any one community of American citizens which may be seeking it, let us narrow it to the question: representation or no representation? If this body is to grant representation in Congress to any community of American citizens, it should do so, and I am confident it will do so generously and effectively or not at all; it should either withhold representation if it is not warranted, or grant it as completely as it may; that is, short of a vote on the floor. That is in essence what this amendment proposes to you with regard to Puerto Rico and its elected representative here: it asks you to grant him as full a measure of representation as it is within your power to grant. It is this proposition that I ask you to support.

Mr. SISK. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I do this with some hesitancy. I have great respect for the distinguished Resident Commissioner of Puerto Rico (Mr. CÓRDOVA). He has discussed his amendment with me, and I might say he appeared before our committee and made a very fine statement in discussing the points which he has raised here on the floor.

Your subcommittee, when studying this matter after having heard the distinguished Resident Commissioner, had some studies made by the Library of Congress. We have looked into it to some extent.

I am not here proposing to make any great constitutional argument. In view of the fact that the committees are merely the creatures of the House and are an extension of the House, and in view of the fact that—as I understand by the statement of the distinguished Resident Commissioner—there is no question he could not vote on the floor of the House, as a constitutional matter, therefore it certainly is my position, and I know that of many scholars, then to vote in a committee would raise the same constitutional question.

I might say that, as the distinguished Resident Commissioner has said, there was a time back some 100 or 150 years ago when certain Delegates were given temporarily some additional responsibilities. As late as 1932 the chairman of the House Committee on Indian Affairs appointed a subcommittee to examine and report on this very question, because it was a question at that time. Actually, that information is available. You will note from the report that it deals primarily with statutes and rules relating to the status of a Delegate. However, it does state that a Delegate from a territory is not a Member of the House of Representatives. Nowhere in the Constitution nor in the statutes can the intention be found to clothe the Delegate with legislative power. Manifestly the House could not elect to one of its standing committees a person who is not a Member of the House.

As I say, basically the information furnished to your subcommittee by the Library of Congress and other sources of authority indicate that the practice of Delegates in the House of Representatives has been more or less a courtesy extended by the House to representatives of territories or areas other than States but certainly not having the right to vote. I think in granting the right to vote in a committee, if we consider the weight of that vote, the weight of that vote could be substantially greater on an issue pending in a committee or a subcommittee than it would be on the House floor. So if we project the theory of what is involved, it is the opinion certainly of our subcommittee and, as I say, of this Member particularly that it would not be in order.

In spite of my sympathy and my great respect for the Resident Commissioner, the committee would oppose the amendment as it has been offered.

Mr. FOLEY. Mr. Chairman, I move to strike the necessary number of words.

Mr. Chairman, I earnestly hope that this amendment will be adopted.

I have great respect for the gentleman from California who is the distinguished floor manager of this bill. However, what the gentleman has just told the committee is that there is some possible objection to the constitutionality of this amendment. Now it is very clear, as the Resident Commissioner has said, that a constitutional amendment would be required to give the Resident Commissioner a vote in the Committee of the Whole or the full House. This amendment proposes only to give the Commissioner a vote on standing committees. The committees of the House of Representatives are creatures of the House of Representatives. They can be extinguished at will and created at will. It does not even require concurrence of the other body when we take such an action. Depriving members of the right to vote in a committee is fully within the power of the House, by abolishing the committee. Giving them additional rights to vote is within the power of the House by creating a new committee. The point is that the constitutional issue does not touch preliminary advisory votes which is what standing committee votes are, but only the votes which are cast in the Committee of the Whole or the full House. These votes can be cast only by Members of Congress. So nothing that the Resident Commissioner could do in a committee vote could become a final decision unless a majority of the elected Members of Congress supported his position. However, in the standing committee itself I think that the Member from Puerto Rico should have a vote. I think the House has the constitutional authority to give him a vote in that limited area. Certainly there are the most powerful reasons for this. There are 2.7 million American citizens in Puerto Rico. They serve in the Armed Forces and have done so with great distinction. They have bled and died for this country. I think we have an obligation to give them the maximum feasible representation in the Congress of the United States and in the House of Representatives.

I think the overwhelming opinion of the American people would support going as far as we constitutionally can go to give them the fullest representation we can. We should not quibble about vague matters in dispute. We clearly cannot give him a vote in the House; and the fact that he does not have a vote in the House means that anything he does in committee has to be endorsed by the Members of Congress, or it does not become law. But we ought to give him the opportunity to operate with as much authority as he can for the interest of the 2.7 million constituents he represents—which is more than five times the number of people that any one of us has the honor to represent.

Mr. SISK. Mr. Chairman, will the gentleman yield?

Mr. FOLEY. I yield to the gentleman from California.

Mr. SISK. Mr. Chairman, of course my good friend the gentleman from Washington, for whom I have great respect, is making a great plea for statehood for Puerto Rico—and I also have great respect for the people of Puerto Rico. On the other hand they enjoy through the Commonwealth status some substantial advantages over statehood and if we are faced with the issue of statehood, that is another issue.

Mr. FOLEY. I must respectfully disagree. If it was a question of statehood then there would not be a question of a right for the Resident Commissioner to vote in a committee, because he would then have the right to vote on the floor of the House as a full Member, and there would be five other colleagues from Puerto Rico along with him who would vote with him, and there would be two Senators in the other body as well. But this amendment is a minimum sort of thing where the representative from Puerto Rico would have the opportunity to vote in the standing committees, subject in any event to the affirmation or disaffirmation of the Members of the House.

Mr. McCLORY. Mr. Chairman, will the gentleman yield?

Mr. FOLEY. I yield to the gentleman from Illinois.

Mr. McCLORY. Mr. Chairman, I thank the gentleman for yielding, and I think the gentleman from Washington is making a very sound legal argument, and I think that he is assisting the position of the gentleman from Puerto Rico, the Resident Commissioner. It is true that if he acts on matters in committee that he is not going to be able to make any laws through a vote on the floor of the House with respect to such legislation, one way or another, but he is going to be a representative of the people of Puerto Rico, and that it seems to me is what we want the Resident Commissioner of Puerto Rico to be able to do.

American citizens of Puerto Rico deserve increased attention by the Congress of the United States. The spokesman of these more than 2 million American citizens is their Resident Commissioner—JORGE L. CÓRDOVA, who serves—without a vote—on the Agriculture, Armed Services, and Interior and Insular Affairs Committees of this House.

Mr. CÓRDOVA is present on the floor of the House more than most other Members, and he is a most articulate and knowledgeable representative of the people whom he represents.

May I add that the other committee members and, indeed, all Members of the Congress could benefit from this expanded role which it appears clearly the Congress can take legally and constitutionally.

Many of our citizens from Puerto Rico are of the impression that they are being discriminated against with regard to educational, employment, and housing opportunities. Such charges must be investigated and the basis for the charges must be removed. At the same time, our Puerto Rican compatriots must be given the fullest possible opportunity for expression within the limits of their Commonwealth status. It is my earnest hope that statehood for Puerto Rico will come soon—to the end that full voting representation in this House and in the other body may be enjoyed.

Meanwhile, both encouragement and fairness can be provided through adoption of the amendment offered by the gentleman from Puerto Rico (Mr. CÓRDOVA).

In recent conversations with a group of my constituents who have moved recently to Lake County, Ill., from Puerto Rico, I am informed that there are now more than 10,000 local residents who have migrated from their Puerto Rican birthplace. These citizens who are now residents of the 12th Congressional District of Illinois enjoy voting and other rights equal with those of other American citizens—and it is my intention to see that those rights are protected and—to the extent possible—that the aspirations of these and other Spanish-speaking Americans are fulfilled.

Today, we are concerned solely with the issue of the right of the Puerto Rican Resident Commissioner to vote as a member of the standing committees upon which he serves. I support the amendment which carries out this purpose, and I urge wholehearted passage of the amendment offered by the gentleman from Puerto Rico (Mr. CÓRDOVA).

Mr. FOLEY. Mr. Chairman, I thank the gentleman. I think that when we give the Resident Commissioner a vote in standing committees that we are just permitting him to make recommendations, but that on the final result he is not permitted to vote on the floor to either accept or reject such matters. What we will be doing is to permit him to better serve his almost 3 million constituents, who are American citizens as fully as you or I. These citizens have only one voice in their behalf in the House of Representatives. There is none in the other body.

The one voice is the Resident Commissioner. In the present case the incumbent is so distinguished and able, so wise and diligent a legislator, that we would all be richer for his more effective service. His personal capacities recommend this amendment to us. Justice to the interests of our fellow citizens of Puerto Rico requires this amendment. I am confident we shall approve it.

Mr. SCHEUER. Mr. Chairman, will the gentleman yield?

Mr. FOLEY. I yield to the gentleman from New York.

Mr. SCHEUER. Mr. Chairman, I rise to support my colleague. On the island of Puerto Rico we find that there is a great deal of feeling on the university campuses and among the intelligentsia that the Puerto Ricans are not represented adequately in the Congress. To the extent that we can constitutionally give them a more meaningful participation and a stronger voice and a better forum through which to represent their interests through the office of the Resident Commissioner, I think is highly desirable.

Mr. GUDE. Mr. Chairman, I rise in support of the amendment of the gentleman from Puerto Rico, granting the Resident Commissioner the right to vote in committee and providing for his appointment to committees by regular House procedures.

Mr. Chairman, I do not believe that we can really give any valid reason or explanation for denying the Resident Commissioner the right to vote in standing committees. His constituents lose the benefits of effective representation at a very critical stage of the legislative process, and we all honestly know that our committees lose the benefits of his accumulated expertise and judgment as would be delivered through his vote. I believe conscientious Commissioners like the gentleman now serving from Puerto Rico should not be relegated to a solely advisory role. He can contribute much to the legislative process through this change and we should have the benefit of it.

Mr. Chairman, I also see no reason to appoint the Commissioner to a limited number of committees. To the extent possible, existing procedures permit us in Congress to opt for committee appointments that reflect our own interests and those of our constituents as we see them. Part of the job of a Representative is making those choices.

Mr. Chairman, I urge the adoption of the amendment.

Mr. BINGHAM. Mr. Chairman, will the gentleman yield?

Mr. GUDE. I yield to the gentleman.

Mr. BINGHAM. Mr. Chairman, I would like to join in support of this amendment. It seems to me it is a minimum step to be taken and one that I see no difficulty with, insofar as the constitutional issue is concerned.

As has been pointed out by my colleague, the gentleman from New York (Mr. SCHEUER), it is important for us to try to allay the feelings of the people on the island of Puerto Rico that the Congress is not concerned with their welfare and has not taken all steps to give them the representation that they might have within the framework of the Constitution.

This amendment will be a small step in the right direction.

Mr. LOWENSTEIN. Mr. Chairman, will the gentleman yield?

Mr. GUDE. I yield to the gentleman.

Mr. LOWENSTEIN. Mr. Chairman, I appreciate the courtesy of the gentleman. I am happy to add my voice to those that have already been raised in support of this amendment.

I simply want to say that I think it would be useful to adopt this amendment. It would be a step in the right direction.

Mr. BIAGGI. Mr. Chairman, will the gentleman yield?

Mr. GUDE. I yield to the gentleman.

Mr. BIAGGI. Mr. Chairman, I rise in support of this amendment to grant equal committee assignment and voting privileges to the Resident Commissioner from Puerto Rico. As the only representative of some 3 million American citizens living in that island territory, it is imperative that this body recognize his position and endow him with the powers of the vote in committee.

But there is more involved here than just granting the right to vote to one of our colleagues who occupies a unique position. For it is just this unique position that affords this body the opportunity to strengthen the relationship between the 50 States and the territory of Puerto Rico. Moreover—and more importantly—it enables the citizens of the States to enhance their image of fairness and justice in the eyes of their fellow Americans of Spanish ancestry living in Puerto Rico.

Besides the equities involved—and there are many—I must say in all candor, that I have a personal interest in this matter. I have family living in Puerto Rico. My son-in-law, a native, tells me that he and my daughter are deeply interested in the activities here in Congress and their island's relationship with the United States. They feel very strongly that there must be a strengthening of the bonds among those Americans living in the States and those living in Puerto Rico.

I would also point out that the many Americans who came from Puerto Rico and are now living in the United States together with those still living on the island form a group of people whose rich history, customs, and philosophy of life have much to offer to the potpourri of American culture and spirit. Having this tradition more strongly represented in this body is essential for developing the equal rights of citizenship for Puerto Rican Americans everywhere.

As the gentleman from Puerto Rico (Mr. CÓRDOVA) so aptly pointed out, this amendment would not set new precedent. Certainly the experience of granting the right to vote in committee to previous Resident Commissioners who served in the early years of the Republic has proven fruitful and successful.

Further, if the people of Puerto Rico should decide in the future to become a State of the Union, this first step toward complete representation would make such a transition smoother.

During this session of Congress there has been considerable discussion about the right to vote. Perhaps not since the Constitutional Convention in the post-revolutionary period has so much concern been accorded the question of the enfranchisement of various groups. We have considered only recently in this body the right to vote for 18-, 19-, and 20-year-olds. We have also questioned the continued disenfranchisement of the residents of the District of Columbia.

Now that we have the opportunity to provide the residents of Puerto Rico with more substantial powers in Congress through granting the right of committee vote to their elected representative we should not hesitate to do so.

I therefore strongly urge my colleagues to vote "yes" on this important amendment and grant that right to vote to the Resident Commissioner from Puerto Rico—a right we can no longer justify denying him.

Mr. KOCH. Mr. Chairman, will the gentleman yield?

Mr. GUDE. I yield to the gentleman.

Mr. KOCH. Mr. Chairman, I rise in support of the amendment. The citizens of Puerto Rico, also citizens of the United States, now numbering 2.7 million, de-

serve greater representation than is presently accorded them in this House.

It would take a constitutional amendment to grant the Resident Commissioner of Puerto Rico who sits in this House as a nonvoting Delegate the right to vote with the other Members of this House on legislation coming before it. However, the amendment now offered by the Resident Commissioner to the bill before us seeks simply to permit the Resident Commissioner to vote in those standing committees of this House to which he may be assigned. This House has the power under its rules to do that and it should.

Mr. SISK. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, apparently this has become Puerto Rican popularity day. That is fine and dandy. I think we all have great admiration for the people of Puerto Rico. As I have already indicated, I certainly have great respect for the Resident Commissioner from Puerto Rico. But I am just wondering if some of you have looked down the road and think of what you are doing if you approve of this amendment.

I wanted to ask the gentleman from Washington if he wishes to or will accept him as part of a quorum—in other words will he be counted for the purpose of a quorum in committee. I do not see the gentleman on the floor at the moment. But I am curious to know if it would be interpreted that he would be entitled to vote in the Committee of the Whole House on the State of the Union, as the Committee of the Whole certainly is separate and apart from the House and in the same sense is a creature of the House in the same sense that a committee is a creature of the House.

Again, I certainly have no objections to the distinguished gentleman, Mr. Córdova, voting—but I am very much concerned about the precedents that you are setting because what we are talking about may well apply to Delegates who come to the House in the future. I know, for example, that we have a number of islands out in the trust territories, and I have had the opportunity to visit them and I have great respect for those people, the Micronesians, the Samoans, and the Guamanians and many others, who some day may want Delegate representation.

All that I am asking you to do is to take a look at what you propose to do.

Let me say, I could almost say that this would be representation without taxation. You know we hear about taxation without representation, but if you know anything about the Commonwealth status, the Puerto Ricans do not pay income taxes to the U.S. Government but rather to their own Commonwealth.

I would only ask that the Members look very carefully at what the long-range results of this could be. I have very grave questions about the constitutionality of it. But I think there are even far more serious implications than merely that of constitutionality.

Mr. CAREY. Mr. Chairman, I move to strike out the last word and rise in support of the amendment.

Mr. Chairman, I do not claim any special knowledge with regard to this amendment or as to the rules of this distinguished body.

But I served for 4 years as chairman of the Subcommittee on Territory and Insular Affairs. I have looked with great concern at our territorial questions in our committee with the help of the gentleman from Washington (Mr. FOLEY) and Members on the other side, the gentleman from Maryland (Mr. MORTON), and we have worked earnestly to find and develop ways in which we can consolidate and join and associate ourselves more closely politically with these noncontiguous areas of the United States. It is most important that we do so.

The Commonwealth of Puerto Rico is, indeed, a showcase of democracy sitting in the Caribbean in contradistinction to the Castro dictatorship which sits alongside of it.

It is most important that we take every step possible to extend to the people of the Commonwealth of Puerto Rico every possible means of voicing democratically their concern in the Congress of the United States.

The gentleman from California, for whom I have great respect, has said that this is turning into Puerto Rican Popularity Day. Maybe it is time that we had a Puerto Rican Popularity Day in this committee. Popular government is in the Commonwealth of Puerto Rico but it is not represented well enough in terms of voting here in this body. This small gesture, of great importance to the distinguished Resident Commissioner, to allow him to vote in the committee on which I serve, would be a great benefit to that committee. I would like to have him vote. He is most diligent in his attendance at the committee meetings. He might help us to get a quorum on occasion when we cannot get one from our stateside colleagues.

Maybe it is going in the direction of statehood, but is there any doubt that the Commonwealth of Puerto Rico will be our 51st State, or some such State, in this Union? The President has called for a presidential vote for the people of Puerto Rico. What better way to go in that direction than to give to the Resident Commissioner in the committee in which he sits, with his voice, his experience, his expertise, and his dedication to his people, our neighbors and our fellow we can do so here in the House on the citizens, the right to cast his vote in committee? If we want to eradicate that vote, floor. We can reject the committee recommendation if a measure carries by his vote, or we can note his vote in approbation of a measure which affects the Commonwealth of Puerto Rico and our country and take note on that in our deliberations. But we would have his guidance as we do not have it now.

I think it is a fine amendment. I stand in favor of Puerto Rican Popularity Day because whenever we have a popularity day for any group of American citizens, I want to stand up and be counted on that occasion.

Mr. PATTEN. Mr. Chairman, will the gentleman yield?

Mr. CAREY. I yield to the gentleman from New Jersey.

Mr. PATTEN. Mr. Chairman, I would like to be in the parade of the Spanish-speaking people in my community. Sunday night I am going to a banquet, and I would appreciate the House adopting this amendment so I can tell them that I have supported the amendment.

Mr. CAREY. We are seeking to adopt an amendment offered by the minority, where the gentleman from Puerto Rico sits. I would like to yield to him at this time.

Mr. CÓRDOVA. I appreciate the gentleman yielding.

Mr. Chairman, I wish to clarify a question brought up by the gentleman from California with relation to participation by the Resident Commissioner of the Commonwealth of Puerto Rico in the Committee of the Whole House on the State of the Union. The amendment which I have offered refers expressly to the standing committees. I believe the Committee of the Whole House is not a standing committee.

Mr. CAREY. I thank the gentleman for making that clear. When the gentleman from California (Mr. SISK), for whom I have the highest regard, said that the amendment would have an effect on the trust territories, I wish to point out that the people in the trust territories are not citizens or nationals of the United States. They are in a trusteeship under the United Nations. The amendment would have no effect on the people of those territories. If we seek to bring the people of the territories and the Commonwealth closer to the American framework and democracy, what better step could we take at this time to indicate our attitude?

Mrs. CHISHOLM. Mr. Chairman, I move to strike the requisite number of words.

The CHAIRMAN. The gentlewoman from New York is recognized for 5 minutes.

Mrs. CHISHOLM. Mr. Chairman, a previous speaker referred to the fact that this might be Puerto Rican Popularity Day. The fact is that we have to consider what we are dealing with, with whom we are dealing, and what has been the concern of these people for such a long time. Their concern has been over the fact that they have not had any real voice in their own destiny. The fact is that they do have a Resident Commissioner, but a Resident Commissioner in name only, one who possesses a paper title without any real rights or obligations.

Many of us feel that we appease certain groups so long as we engage in a few kindly acts. The fact is: there is no real voice; there is no real representation for these 2 million people who have very specific problems and very specific concerns. It seems to me that the minimal thing that we can do is to permit the Resident Commissioner to at least have a vote or some voice in the standing committees.

Recently it was interesting to note in Puerto Rico that certain persons of Puerto Rican heritage from the mainland were not able to communicate certain real daily concerns to our Government because of the fact that they lacked this real voice with authority in Wash-

ington. The Resident Commissioner knows better than any of the rest of us in this body, regardless of how well our intentions may be, the problems of his people, the unique concerns of his people and, if nothing else since he lives here and is a part of the House of Representatives, we should give the Resident Commissioner authority commensurate with the fact that he is the only voice for 2 million Puerto Rican citizens.

Let us take away a paper title and afford him the opportunity to voice the aspirations and hopes of his people. They are Americans.

Mr. BOW. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in support of this amendment. I remember some years ago when I led the fight on this floor to bring about Commonwealth status to the Commonwealth of Puerto Rico.

I would say further, if this is popularity day, I want to join in this, because I have known these fine people for many years and I have worked on this floor to bring about the status I have referred to.

I should like to remind my friends who suggested something about the other islands, that the French islands have full representation in the French Parliament. Their delegates are elected from the islands and go to the French Parliament and there have full representation in that Parliament. I would hope the day would come when the Puerto Ricans may have full representation in this House of Representatives. I recognize the gentleman who now is the Resident Commissioner is a very able legislator, one of great experience, and I am sure everybody on both sides of the aisle is proud to have the gentleman here and is proud to serve with him.

Mr. Chairman, I would hope the amendment offered by the gentleman carries.

Mr. GROSS. Mr. Chairman, if the gentleman will yield, how about Puerto Rican representation in the other body, the U.S. Senate?

Mr. BOW. I would be in favor of that.

Mr. GROSS. All right. Let us get them in.

Mr. BOW. If the gentleman would help us get that, I would be delighted if we would get representation in the other body for Puerto Rico, but I cannot see how we can say that because the other body has not granted representation, we in this body should withdraw or withhold representation from these fine people.

Mr. GROSS. All I want is for the other body to have all the good things of life.

Mr. BOW. I think they have them pretty well.

Mr. DERWINSKI. Mr. Chairman, I rise in support of the amendment offered by the gentleman from Puerto Rico.

May I note, Mr. Chairman, that while I support the amendment offered by the gentleman from Puerto Rico, it seems to me if this debate goes on much longer, the illogic of most of his supporters might start to work against the gentleman's amendment, with all due respect to the gentlemen who have arisen to support the amendment, this is not going to solve the problems of unrest. On the island of Puerto Rico, it is not going to cool off the radicals on their campuses, and it is not something the people in the streets of Puerto Rico are aware of.

The gentleman made a calm and reasoned argument in support of his amendment.

Mr. Chairman, I would also add that voting in the committee would be an expansion of the Commissioner's voice. Puerto Rico ought to be a State, and all those who loudly support this amendment ought to be in the vanguard of support for statehood for Puerto Rico. The point is the people of Puerto Rico have refused to accept the status of statehood. Perhaps if we expand the voice and influence and the vote of the Resident Commissioner, it will inspire Puerto Rico to accept statehood, and accept the responsibilities.

They have a unique situation. They have all the rights of American citizenship without all the responsibilities, because of this unique Commonwealth status.

Mr. MILLER of Ohio. Mr. Chairman, I move to strike the requisite number of words and I rise in support of the amendment offered by the Resident Commissioner from Puerto Rico.

Mr. Speaker, I would like to express my support for the amendment before us which would give the Resident Commissioner from Puerto Rico the right to vote in committee as well as granting him the same privileges as his colleagues in committee. This is an important and necessary change in the rules of this body. I think we would be hard pressed to find and explain the basis for the present rule which states that Delegates have no broader rights or privileges in committee than on the floor of the House. This rule clearly denies 2,700,000 American citizens a voice in affairs directly affecting their welfare and security. To continue to deny the duly elected representative of the people of Puerto Rico any meaningful participation in the activities of this body is neither in keeping with the truest democratic principles nor serves the best interests of the Nation. If we are serious in our intentions to reform the rules and practices under which we serve the people, we must give this long overdue measure our fullest support.

Mr. CÓRDOVA. Mr. Chairman, will the gentleman yield?

Mr. MILLER of Ohio. I yield to the gentleman, the Resident Commissioner of Puerto Rico.

Mr. CÓRDOVA. Mr. Chairman, I want to reply briefly to the observations of my good friend, the gentleman from Illinois, who suggested that Puerto Rico is not bearing the responsibilities of statehood. I wish to point out that Puerto Rico is bearing the responsibilities of American citizenship in every way except in bearing the full burden of direct taxation, but we bear what I consider to be a much more important burden than the burden of taxation, in the burden of the blood tax which we pay gladly to the Nation and have been paying gladly in all of the wars of this century.

Besides that, we help to subsidize as no other section of the United States helps to subsidize the American merchant marine, because we carry all our freight on American bottoms and thus pay a higher cost than we would if we were not a part of the United States. That is a very real burden involving billions of dollars of goods moving to and fro from Puerto Rico.

I could go on reciting numerous burdens. We buy so much from the States that we help to pay indirectly the taxes of many taxpayers, because we are a part of the United States and practically must buy from the United States.

We are happy to do it. We are happy to bear all these burdens. We are not yet decided, unfortunately—I am, but many of my people are not—about statehood. But we are bearing a very great share of the burdens of the American citizens.

The CHAIRMAN. The question is on the amendment offered by the Resident Commissioner from Puerto Rico (Mr. CÓRDOVA).

The amendment was agreed to.

The CHAIRMAN. Are there additional amendments to section 122?

AMENDMENT OFFERED BY MR. GROSS

Mr. GROSS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GROSS: On page 45, line 10, after the word "mail" insert the following: "at rates the taxpayers can afford to pay."

Mr. GROSS. Mr. Chairman, in case any Member is interested, the word "mail" in this case is spelled m-a-i-l.

This would make the provision with respect to the Postmaster of the House of Representatives read as follows:

The Postmaster shall superintend the post office in the Capitol and in the respective office buildings of the House for the accommodation of Representatives, the Resident Commissioner from Puerto Rico, and officers of the House and shall be responsible for the prompt and safe delivery of their mail at rates the taxpayers can afford to pay.

That is my amendment to this ridiculous bill. I am just trying to help out and get the taxpayers into this act somewhere along the line.

Mr. SISK. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I am glad to yield to the gentleman from Califorina.

Mr. SISK. Is the gentleman offering an amendment? I am sorry; I did not quite get clear what the gentleman was doing.

Mr. GROSS. I am offering an amendment to page 45, line 10, to say that the Postmaster of the House of Representatives shall be held responsible for the prompt and safe delivery of mail at rates the taxpayers can afford to pay. That is all.

Mr. Chairman, I yield back the remainder of my time.

Mr. SISK. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I yield back the remainder of my time.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa (Mr. GROSS).

The amendment was rejected.

The CHAIRMAN. The Committee will rise informally in order that the House may receive a message.

The Speaker resumed the chair.

The SPEAKER. The Chair will receive a message.

FURTHER MESSAGE FROM THE PRESIDENT

A further message in writing from the President of the United States was communicated to the House by Mr. Leonard, one of his secretaries.

The SPEAKER. The Committee will resume its sitting.

LEGISLATIVE REORGANIZATION ACT OF 1970

The Committee resumed its sitting.

The CHAIRMAN. Are there additional amendments to be proposed to section 122?

Mr. SISK. Mr. Chairman, I rise to make a unanimous consent request. I ask unanimous consent to return to page 39 of H.R. 17654, immediately below line 4, for the purpose of offering a perfecting amendment to the amendment offered by the gentleman from Texas (Mr. WHITE), which was adopted back quite some time ago. I submit the amendment.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

Mr. GROSS. Reserving the right to object, Mr. Chairman, let us hear the amendment read.

Mr. SISK. I would be very happy to do so, Mr. Chairman.

The CHAIRMAN. Unless there is objection, the Clerk will read the amendment.

There was no objection.

The Clerk read as follows:

Amendment offered by Mr. SISK:

In paragraph (b) of clause 2 of Rule XV of the Rules of the House as contained in the amendment offered by Mr. White to page 39, immediately below line 4, insert "which is privileged and shall be decided without debate," immediately after the words "a motion".

The CHAIRMAN. Is there objection to the unanimous consent request of the gentleman from California?

Mr. GROSS. Still reserving the right to object, Mr. Chairman, will the gentleman from California relate that to the language of the White amendment so that we may know precisely what is being proposed here?

Mr. SISK. Will the gentleman yield?

Mr. GROSS. I am glad to yield to the gentleman.

Mr. SISK. I will be happy to do so, because I did propose to explain this.

This is a perfecting amendment. At the time the gentleman from Texas offered his amendment, the gentleman will remember now, some month ago or more, we had agreed the next day that the amendment did need certain perfecting language. Unfortunately, there has been some time that has elapsed since then. The language of the gentleman from Texas (Mr. WHITE) dealt with the conduct of calls of the House, as the gentleman remembers. I could read the entire page, if the gentleman would like to have me do so. However, there is a sentence down near the center of the amendment where this statement is made:

When a quorum has been recorded, which in the Committee of the Whole House shall be 100 members, the Clerk shall advise the Speaker or the Chairman of this fact, after which it shall be in order to entertain a motion to dispense with further proceedings under the call.

That is the way the present language reads. With the perfecting amendment which we are offering it will read thus:

When a quorum has been recorded, which in the Committee of the Whole House shall be 100 members, the Clerk shall advise the Speaker or the Chairman of this fact, after which it shall be in order to entertain a motion which is privileged and shall be decided without debate to dispense with further proceedings under the call.

This is in order to avoid delaying tactics or a debate in connection with whether a quorum has actually been present.

In line with our staff's thinking, checking with the existing rules, we have written this language to make it conform. It is simply a conforming amendment.

I might say it has been discussed with the gentleman from Texas (Mr. WHITE) and others interested, and it was acceptable. It is a technical amendment pure and simple.

Mr. GROSS. It seems to me it is a substantive amendment. Does the gentleman realize that he is going to have this House of Representatives so efficient that neither the Members nor the public is going to recognize it for what it is?

Mr. SISK. Will the gentleman yield further?

Mr. GROSS. Yes.

Mr. SISK. Of course, the House, as I recall it, by almost a unanimous vote, adopted the amendment offered by the gentleman from Texas, which, of course, it is hoped would speed up the creation of a quorum and the procedure of calling the roll.

Mr. GROSS. I again ask what it is proposed to do with all of the time this bill is supposed to save? Tell me, what is proposed to be done with all the time that will allegedly be saved by outlawing all dilatory tactics, if you can call them that?

Mr. SISK. Well, of course, if the gentleman will yield further, I think it could be put to good use for the benefit of the public.

Mr. GROSS. I am glad the gentleman said it could be and not would be.

Mr. SISK. Let us hope that it will be. I recognize of course that it is up to us as representatives of the people to do a better job and have a more efficient use of our time. Of course unfortunately we have many times not been very efficient. Of course many of the provisions of this bill it is hoped will improve the procedures and will move things along faster and will make it possible for us to do a better job. I recognize that it is still up to us to do the job and that we cannot expect the new language we may write to remove all of the problems or to be any panacea, but that if we put them into practice it does seem that we can more efficiently and more effectively legislate.

Mr. GROSS. Well, I do not know. This congressional face-lifting job that is being put on here now is a little hard to assimilate at the speed at which we are going. I think we ought to do this all over again. Therefore, Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

AMENDMENT OFFERED BY MR. BENNETT

Mr. BENNETT. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BENNETT: On page 47, immediately following line 5, insert the following new section:

"CLOSING OF THE DOORS IN CALLS OF THE HOUSE

"Clause 2 of rule XV of the Rules of the House of Representatives is amended by striking out ", and in all calls of the House the doors shall be closed, the names of the Members shall be called by the Clerk, and the absentees noted;" and inserting in lieu thereof ", and in all calls of the House the names of the Members shall be called by the Clerk, and the absentees noted, but the doors shall not be closed except when so ordered by the Speaker;"."

Mr. SISK. Mr. Chairman, will the gentleman yield?

Mr. BENNETT. I yield to the gentleman from California.

Mr. SISK. Mr. Chairman, insofar as this member of the committee is concerned, I see nothing wrong with the amendment offered by the gentleman from Florida and therefore as far as I personally am concerned I do not intend to oppose the amendment.

Mr. SMITH of California. Mr. Chairman, will the gentleman yield?

Mr. BENNETT. I yield to the gentleman from California.

Mr. SMITH of California. Mr. Chairman, I have tried to get this done for the last year and a half but the Committee on Rules just sort of laughed at me. I think that opening these two side doors will make it easier to get into the Chamber.

Mr. BENNETT. This is only for the purpose of expediting attendance on the floor.

Mr. SMITH of California. Mr. Chairman, I have no objection to the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Florida (Mr. BENNETT).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. BINGHAM

Mr. BINGHAM. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BINGHAM: On page 47, insert the following new section after line 5:

"SEC. —. Section 3 of Rule X of the Rules of the House of Representatives is amended by deleting the semicolon and inserting in lieu thereof the following: ", *Provided however*, That no Member of any committee shall be eligible to be elected chairman who has served four or more terms in that office,

except by a two-thirds record vote of the House to suspend the rules, and provided further that no Member shall be eligible to be elected chairman of a standing committee who in the same Congress has been elected chairman of another standing committee or is chairman of the Joint Committee on Atomic Energy or the chairman of the Joint Economic Committee.' "

Mr. BINGHAM. Mr. Chairman, this amendment which would limit the term of committee chairmen to a period of 8 years, unless the House voted by two-thirds to suspend the rules, really should be adopted overwhelmingly by this body. According to my calculation, 394 Members out of the 435 stand to gain by it. But something tells me that it will not receive that number of votes.

In putting this amendment forward now, I have no great expectation that it will be adopted by this Committee of the Whole. I say that particularly in light of the fact that from the earlier proceedings on this bill it was quite clear that the Members were not yet willing to make any substantial change in the seniority rule. But I put the amendment forward in the hope that it will be studied and considered by the Members, with the possibility of future action.

Mr. Chairman, what I am suggesting is based on a very simple principle. It is the principle of rotation of office, of spreading the responsibility around a little bit. We have a constitutional amendment which limits the President of the United States to two full terms. Something similar, it seems to me, could be applied reasonably to the important positions in this House that are held by the chairmen of the committees.

We often hear, particularly freshmen Members and junior Members, that all are equal in this body. Well, some are more equal than others. There is no doubt about it. The prerogatives and privileges and powers that go with the chairmanship in the great committees are very considerable indeed and most of us in the House will not have a chance ever to exercise them.

So I suggest that my proposal is something that might be considered and studied as one method of dividing up the responsibilities in this House a little more equally than they are today.

Mr. DENT. Mr. Chairman, will the gentleman yield?

Mr. BINGHAM. I yield to my friend, the gentleman from Pennsylvania.

Mr. DENT. Would it not be a lot simpler just to follow the thing all the way through and say that Members of the House cannot serve for more than 8 years in order that they would then share in the responsibility by spreading it around—but instead to have a limit the same as the President and to say that instead of depriving a Member of the chairmanship at a time in his life when he probably knows more about the subject than most of the people on the committee do? That is the way it has happened in my lifetime of 38 years in legislative bodies.

If you want to do it all the way, just make it for a period of 8 years as the term of office and give the Member some kind of juicy pension like the President gets.

I think most Members would be willing to quit then, if everybody could serve 8 years and once in a while get to be chairman.

Mr. BINGHAM. This proposal might be simpler, I will say to my friend, but I would not be in favor of it.

Mr. SISK. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I actually feel that this possibly would be subject to a point of order but I do not make a point of order since I understand it was not felt that it would be sustained.

But I do oppose the amendment.

Mr. Chairman, I think this matter has been pretty substantially discussed. I do not feel it would be helpful to the pending bill and, therefore, ask for the defeat of the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York (Mr. BINGHAM).

The amendment was rejected.

AMENDMENT OFFERED BY MR. HECHLER OF WEST VIRGINIA

Mr. HECHLER of West Virginia. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. HECHLER of West Virginia: On page 47, after line 5 and before line 6, insert the following new section:

"TAKING OF WRITTEN NOTES BY VISITORS TO THE HOUSE GALLERIES

"SEC. —. Rule XXXIII of the Rules of the House of Representatives is amended—

"(1) by inserting '1.' immediately before the words 'The Speaker shall set aside a portion of the west gallery'; and

"(2) by adding at the end thereof the following new clause:

"'2. Visitors to the House galleries may be permitted to consult legislative materials and take written notes under such regulations as the Speaker may from time to time prescribe.' "

Mr. HECHLER of West Virginia. Mr. Chairman, this is a very simple and noncontroversial amendment.

I do not plan to take the full 5 minutes although I will certainly entertain any questions that may be asked about the amendment and its implications.

Mr. Chairman, many of our constituents in the galleries have been really puzzled as to why certain restrictive rules are enforced in such a way that they cannot intelligently follow the debate. Some visitors bring a copy of the bill that is being debated, and have tried to open it and look at the bill while listening to the debate. If they try to follow the bill, they are reprimanded because such a practice is against the rules.

It is also against the rules to consult a copy of the pictorial directory of the House of Representatives simply to check the pictures of the Members and identify who is addressing the House, or who is seated at the committee table, or the identification of other Members of the House.

I would like to stress that most of our public visitors who try to take a conscientious, courteous, and attentive interest in the debate in the House of Representatives, are rather rudely and abrutply called to attention by a tap on the shoulder and a voice saying, "You are violating the rules by looking at a copy of the bill or by jotting down the action of the House as it occurs."

My amendment simply provides that the House rules allow the consultation of legislative materials and the taking of written notes "under such regulations as the Speaker may from time to time prescribe." This means that if there is any abuse of this rule, if we find that there are people who might be reading or consulting newspapers or something like that, this certainly could be covered by regulations that the Speaker may provide and prescribe.

I have consulted with the Speaker, the Doorkeeper, and have asked the Legislative Reference Service to examine the history of and precedents for the rule which prohibits notetaking and reading in the public gallery. It is generally concluded that the concept of the visitor's pass originated following the 1954 shooting from the gallery by the Puerto Rican nationalists. Yet all sources agree that the rule against writing and notetaking predates the issuance of the first visitor's pass, even though nobody has been able to come up with any written rule with these provisions prior to their appearance on the visitor's pass. There is nothing specific in the House rules to prevent reading and writing in the public galleries, yet the notations on the visitor's pass have the force of House rules.

It is most difficult for visitors to understand the logic behind this rule, particularly when visitors are genuinely interested in following the debates more intelligently by consulting the bill being debated. I believe we owe it to the public to enable the public to understand the legislative process more clearly.

We also owe it to the public to allow those who wish to follow the proceedings to follow them intelligently through being able to jot down a note or two occasionally, or to consult the pictorial directory so that they can better understand what is going on.

I would like to point out that several Members have expressed their support for this amendment, including the following: COUGHLIN, FINDLEY, KOCH, RIEGLE, ROONEY, RYAN, EDWARDS, and PODELL.

I would be glad to entertain any questions that members of the Committee have concerning the amendment.

Mr. PATTEN. Mr. Chairman, will the gentleman yield?

Mr. HECHLER of West Virginia. I yield to the gentleman from New Jersey.

Mr. PATTEN. I object to the gentleman's saying that our help rudely calls attention to the rule. I think the help is usually very kind and very considerate.

Mr. HECHLER of West Virginia. I appreciate the gentleman's correction and certainly concur with his comment. To the average visitor who is a law-abiding citizen it comes as a somewhat abrupt surprise to be informed he is violating the rules. So I will substitute the word "abruptly." Sometimes it is very disconcerting and embarrassing when you are

trying your best to express your respect for the institution, only to learn to your chagrin that you are in violation of the rules. I recall the first time I visited the Gallery of the House of Representatives. I studied up for weeks on a bill that the House was going to debate and, believe me, it was a rather abrupt shock to have someone come up and say, "You have violated the rules of this body." That was before the time of the visitor's pass.

This occurs many times, and I think it would be in keeping with the spirit of the House of Representatives and our guests in the Gallery if we did allow them to consult legislative materials, and to take written notes under such regulations as the Speaker may from time to time prescribe. I urge adoption of the pending amendment.

Mr. SISK. Mr. Chairman, I rise in opposition to the amendment.

The CHAIRMAN. The gentleman from California is recognized.

Mr. SISK. Mr. Chairman, I have great sympathy for my good friend from West Virginia. I recognize that we all make mistakes occasionally, and that sometimes it can be a bit embarrassing. However, as I am sure my colleague knows, the passes which are issued to visitors in the Gallery outline very specifically what the rules are on the back of the card, and it is very quickly read.

Let me say that your Committee on Legislative Reorganization has attempted to deal with this subject, and we will be considering that later on in the week. That has to do, of course, with the proposal of calling for possible encasement of the Gallery, soundproofing of the Galleries, the consideration of making mikes available or commentators who will explain and attempt to give visitors to the Gallery a great deal more information. Many of us recognize some of the problems, as I am sure my colleague from West Virginia will agree.

A visitor comes into the Gallery unaware of what is going on or what is under consideration, so the procedure is a bit confusing. We hear comments about it. We are attempting, as I have said, to meet that problem. Primarily it is one for the convenience of our visitors. It would seem to me that what the gentleman proposes would be most difficult to police. I can appreciate the problems the Speaker might have or the Chairman of the Committee of the Whole House on the State of the Union, as the case might be, in attempting to determine what might be read or be subject matter allowed. I think there would be confusion, noise, and other things that simply would not be productive. Therefore, with hesitation I would have to oppose the gentleman's amendment.

Mr. HECHLER of West Virginia. Mr. Chairman, will the gentleman yield?

Mr. SISK. I am glad to yield to the gentleman from West Virginia.

Mr. HECHLER of West Virginia. If the committee bill, as written is adopted, with the provision for encasing the galleries and providing a commentator for the galleries, would that not remove much of the argument against this proposal? My amendment could very easily be incorporated within the system which is already outlined in part 7 of the committee bill, which provides for "modernization of the galleries."

Mr. SISK. I think the gentleman is right, of course. The bill provides for authorizing the Speaker to set up a study group to investigate and proceed with enclosing the galleries. Of course, once they were soundproofed, if that was the determination, there is no question but what then many things could be permitted in the gallery in connection with colloquies or running commentaries, which would not interrupt the procedure of the House.

Mr. HECHLER of West Virginia. If the gentleman will yield, page 138 of the bill already provides that the study commission "shall provide for the enclosure of the galleries with soundproof and transparent coverage." I would hope that section of the bill would simplify the adding of the amendment which I have suggested.

Mr. SISK. It is in the bill at the present time, as I say, and we would hope that it would be maintained, but, Mr. Chairman, I urge defeat of the pending amendment.

Mr. STRATTON. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to address a question to the Chairman of the Committee, the distinguished gentleman from California. Do I understand correctly that the pending amendment would provide for enclosing the galleries in some kind of protective screening, or is this something merely to be studied?

Mr. SISK. If the gentleman will yield, the language will be found in a later title, which we hope will be coming up within the next couple of days. It does provide for the Speaker to appoint a committee to make a study and make recommendations, if they see fit, to enclose the galleries.

Mr. STRATTON. If that were going to go through, I would not want to let it pass without saying that whatever may be the perils of serving in this body, I think to shut off the public with some kind of bulletproof glass or screen would be damaging to our democracy and our accessibility to the people. I think these are some of the very few perils that Members of the House would have to endure in these difficult days.

Mr. SISK. If the gentleman will yield further, I would like to comment in connection with that. I would hope that prior to the matter being brought up, which, as I say, is in a later title, if the gentleman will review the record of the committee, he will find there is nothing in there and no particular concern of our committee with respect to any bulletproof glass, making this a fort. This is not the idea. This is for the enhancement of the knowledge of our visitors, and there are a number of ideas as to mikes and a running commentary which could be provided that would definitely enhance the ability of the public to know what is going on. So I would hope the gentleman will read the hearings and the report before we come to that portion. We are not talking about protecting the Members against anything.

Mr. STRATTON. I have not read the entire report, but I do believe that if we were to enclose the entire gallery, that would be a grave mistake. Maybe we could enclose a portion of it, but I do not believe we should have one kind of action going on down here and a separate commentary on it going on in the gallery. I think that would be a mistake.

Mr. JACOBS. Mr. Chairman, will the gentleman yield?

Mr. STRATTON. I yield to the gentleman from Indiana.

Mr. JACOBS. Mr. Chairman, instead of having people here in the galleries hearing mushy sounds and sometimes unable to distinguish the words being spoken, we would have a situation where the visitors would be brought much closer to their Government with the amplifying system in the gallery.

As I understand it, the narration provision would be a periodic narration, simply to say who is participating and what the bill is. It will be just a few seconds at intervals. Far from separating the people from their Government, it would be bringing the people much closer, in my estimation.

Mr. STRATTON. The gentleman is entitled to his view. I just want to be sure my own views on this important issue are in the RECORD.

The CHAIRMAN. The question is on the amendment offered by the gentleman from West Virginia (Mr. HECHLER).

The amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

TITLE II—FISCAL CONTROLS

Mr. SISK. Mr. Chairman, the committee has asked me to make a unanimous-consent request that in connection with title II the title be read by parts rather than by sections. Therefore, I ask unanimous consent that that be the procedure in connection with title II.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

The CHAIRMAN. The Clerk will read part 1 of title II.

The Clerk read as follows:

PART 1—BUDGETARY AND FISCAL INFORMATION AND DATA

BUDGETARY AND FISCAL DATA PROCESSING SYSTEM

SEC. 201. The Secretary of the Treasury and the Director of the Bureau of the Budget, in cooperation with the Comptroller of the United States, shall develop, establish, and maintain, insofar as practicable, for use by all Federal agencies, a standardized information and data processing system for budgetary and fiscal data.

BUDGET STANDARD CLASSIFICATIONS

SEC. 202. (a) The Secretary of the Treasury and the Director of the Bureau of the Budget, in cooperation with the Comptroller General, shall develop, establish, and maintain standard classifications of programs, activities, receipts, and expenditures of Federal agencies in order—

(1) to meet the needs of the various branches of the Government; and

(2) to facilitate the development, establishment, and maintenance of the data processing system under section 201 through the utilization of modern automatic data processing techniques.

The initial classifications under this subsection shall be established on or before December 31, 1971.

(b) The Secretary of the Treasury and the Director of the Bureau of the Budget shall submit a report to the Senate and the House of Representatives on or before September 1 of each year, commencing with 1971, with respect to the performance during the preceding fiscal year of the functions and duties imposed on them by section 201 and subsection (a) of this section. The reports made under this subsection in 1971 and 1972 shall set forth the progress achieved in the development of classifications under subsection (a) of this section. The reports made in years thereafter shall include information with respect to changes in, and additions to, classifications previously established. Each such report shall include such comments of the Comptroller General as he deems necessary or advisable.

AVAILABILITY TO CONGRESS OF BUDGETARY, FISCAL, AND RELATED DATA

SEC. 203. Upon request of any committee of either House, or of any joint committee of the two Houses, the Secretary of the Treasury and the Director of the Bureau of the Budget shall—

(1) furnish to such committee or joint committee information as to the location and nature of data available in the various Federal agencies with respect to programs, activities, receipts, and expenditures of such agencies; and

(2) to the extent feasible, prepare for such committee or joint committee summary tables of such data.

ASSISTANCE TO CONGRESS BY GENERAL ACCOUNTING OFFICE

SEC. 204. (a) The Comptroller General shall review and analyze the results of Government programs and activities carried on under existing law, including the making of cost benefit studies, when ordered by either House of Congress, or upon his own initiative, or when requested by any committee of the House of Representatives or the Senate, or any joint committee of the two Houses, having jurisdiction over such programs and activities.

(b) The Comptroller General shall have available in the General Accounting Office employees who are expert in analyzing and conducting cost benefit studies of Government programs. Upon request of any committee of either House or any joint committee of the two Houses, the Comptroller General shall assist such committee or joint committee, or the staff of such committee or joint committee—

(1) in analyzing cost benefit studies furnished by any Federal agency to such committee or joint committee; or

(2) in conducting cost benefit studies of programs under the jurisdiction of such committee or joint committee.

POWER AND DUTIES OF COMPTROLLER GENERAL IN CONNECTION WITH BUDGETARY, FISCAL, AND RELATED MATTERS

SEC. 205. (a) The Comptroller General shall establish within the General Accounting Office such office or division, or such offices or divisions, as he considers necessary to carry out the functions and duties imposed on him by the provisions of this title.

(b) The Comptroller General shall include in his annual report to the Congress information with respect to the performance of the functions and duties imposed on him by the provisions of this title.

PRESERVATION OF EXISTING AUTHORITIES AND DUTIES UNDER BUDGET AND ACCOUNTING AND OTHER STATUTES

SEC. 206. Nothing contained in this Act shall be construed as impairing any authority or responsibility of the Secretary of the Treasury, the Director of the Bureau of the Budget, and the Comptroller General of the United States under the Budget and Accounting Act, 1921, as amended, and the Budget and Accounting Procedures Act of 1950, as amended, or any other statutes.

DEFINITION

SEC. 207. As used in this title, the term "Federal agency" means any department, agency, wholly owned Government corporation, establishment, or instrumentality of the Government of the United States or the government of the District of Columbia.

Mr. SISK (during the reading). Mr. Chairman, I ask unanimous consent that part 1 of title II be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

COMMITTEE AMENDMENTS

The CHAIRMAN. The Clerk will report the first committee amendment.

The Clerk read as follows:

Committee amendment: On page 47, line 11, strike "Bureau of the" and insert "Office of Management and".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: On page 47, line 19, strike the words "Bureau of the" and insert the words "Office of Management and".

Mr. GROSS. Mr. Chairman, I move to strike the necessary number of words.

Mr. Chairman, what is being proposed here? Will the gentleman explain the reference in the committee amendments to an Office of Management and Budget?

Mr. SISK. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from California.

Mr. SISK. That is a matter which the House acted on earlier, in a reorganization plan. The gentleman, as I recall, was involved in the debate having to do with that reorganization plan some time ago. It abolished the Budget Bureau, or transferred it to a new Office of Management and Budget. It is now called the Office of Management and Budget rather than the Bureau of the Budget. All we are doing here, in view of the fact that the original bill was written prior to adoption of the reorganization plan, is making the bill conform.

Mr. GROSS. I am glad to have the gentleman refresh my memory. Now tell me which one of the many budgets are we dealing with? There are a half dozen budgets floating around. Which one will they deal with?

Mr. SISK. It will be the Federal budget.

Mr. GROSS. Will this be the comprehensive, the unified, the administrative, or the regular budget?

Mr. SISK. Here we are dealing with budgetary and fiscal information and data and the budgetary and fiscal data-processing system. We are not dealing with budget concepts, which is what I believe the gentleman is referring to.

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: Page 48, line 8, strike the words "Bureau of the" and insert the words "Office of Management and".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: Page 48, line 25, strike the words "Bureau of the" and insert the words "Office of Management and".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: Page 50, line 23, strike the words "Bureau of the" and insert the words "Office of Management and".

The committee amendment was agreed to.

The CHAIRMAN. Are there any additional amendments to part 1? If not, the Clerk will read.

The Clerk read as follows:

PART 2—THE BUDGET

SUPPLEMENTAL BUDGET INFORMATION

SEC. 221. (a) Section 201(a) of the Budget and Accounting Act, 1921, as amended (31 U.S.C. 11), is amended—

(1) by striking out the word "and" at the end of subparagraph (10);

(2) by striking out the period at the end of subparagraph (11) and inserting in lieu of the period a semicolon and the word "and"; and

(3) by adding immediately below subparagraph (11) the following new subparagraph:

"(12) with respect to each proposal in the budget for new or additional legislation which would create or expand any function, activity, or authority, in addition to those functions, activities, and authorities then existing or as then being administered and operated, a tabulation showing—

"(A) the amount proposed in the Budget for appropriation and for expenditure in the ensuing fiscal year on account of such proposal; and

"(B) the estimated appropriation required on account of such proposal in each of the four fiscal years, immediately following that ensuing fiscal year, during which such proposal is to be in effect.".

(b) Section 201 of the Budget and Accounting Act, 1921, as amended (31 U.S.C. 11), is amended by striking out the terminated and obsolete subsections (b), (c), (d), (e), and (f) and inserting in lieu thereof the following new subsections:

"(b) The Secretary of the Treasury and the Director of the Bureau of the Budget jointly shall transmit to the Congress, on or before June 1 of each year, beginning with 1972, a supplemental summary of the Budget for the ensuing fiscal year transmitted to the Congress by the President under subsection (a) of this section. Such supplemental summary—

"(1) shall reflect with respect to that ensuing fiscal year—

"(A) all substantial alterations in or reappraisals of estimates of expenditures and receipts, and

"(B) all substantial obligations imposed on that Budget after its transmission to the Congress;

"(2) shall contain current information with respect to those matters covered by subparagraph (8) and clauses (2) and (3) of subparagraph (9) of subsection (a) of this section; and

"(3) shall contain such additional information, in summary form, as the Secretary and the Director consider necessary or advisable to provide the Congress with a complete and current summary of information with respect to that Budget and the then currently estimated functions, obligations, requirements, and financial condition of the Government for that ensuing fiscal year.

"(c) The President shall transmit to the Congress, on or before June 1 of each year, beginning with 1972, in such form and detail as he may determine—

"(1) summaries of estimated expenditures, for the first four fiscal years following the ensuing fiscal year for which the Budget was transmitted to the Congress by the President under subsection (a) of this section, which will be required under continuing programs which have a legal commitment for future years or are considered mandatory under existing law; and

"(2) summaries of estimated expenditures, in fiscal years following such ensuing fiscal year, of balances carried over from such ensuing fiscal year.".

Mr. SISK (during the reading of the section). Mr. Chairman, I ask unanimous consent that part 2 of this title be considered as read and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. SISK. Mr. Chairman, I submit two technical amendments.

Mr. PICKLE. Mr Chairman, reserving the right to object, what page of the measure would this next part you ask unanimous consent to dispense with the reading of deal with?

Mr SISK. If I have the floor, it starts on page 51, line 9.

Mr. PICKLE. Down to?

Mr. SISK. And it goes through line 2 on page 54.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

The CHAIRMAN. The Clerk will report the first committee amendment.

The Clerk read as follows:

Committee amendment: Page 51, line 21, strike out the word "budget" and insert the word "Budget".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: Page 52, line 14, strike the words "Bureau of the" and insert the words "Office of Management and".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: Page 52, line 17, strike the word "budget" and insert the word "Budget"

The committee amendment was agreed to.

AMENDMENT OFFERED BY MR. MAHON

Mr. MAHON. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. MAHON: On page 52, lines 13 through 15, strike out "The Secretary of the Treasury and the Director of the Office of Management and Budget jointly" and insert in lieu thereof "The President" and on page 53, in lines 8 and 9 strike out "the Secretary and the Director shall consider necessary" and insert in lieu thereof "the President considers necessary".

Mr. MAHON. Mr. Chairman, the sole purpose of this amendment is to preserve the principle that the budget is the President's budget, not the budget of any subordinate department or official of the executive branch. This principle has been in the law for 50 years.

Under the 1920 law, only the President can submit budget estimates and recommendations to Congress. Only the President can submit amendments and supplements and revisions to his annual budget.

The pending section of the bill calls for a so-called midsession updating of the annual budget submitted by the President at the beginning of the session. As the section is now written, the updating would be done or would be transmitted by the Secretary of the Treasury and the Director of the Office of Management and Budget, not by the President.

I very much doubt the wisdom of imposing a statute on subordinate officials, the duty of officially revising estimates of their superior, the President, This would do violence to the longstanding principle that the budget is the President's budget, and moreover, could prove embarrassing to these subordinate officials.

I would like to yield to the gentleman from California (Mr. SISK) for his comment as to this matter.

Mr. SISK. Mr. Chairman, I thank the gentleman for yielding. Let me say that I see no basis for objection to the change. This, of course, as I am sure the distinguished gentleman from Texas knows, deals with a supplementary budget updating coming down later, following the regular submission at the outset of the session. And, of course, it would not be expected that the President personally would come down.

The committee at the time this was under discussion actually made it a burden on the Secretary of the Treasury and the Director of the Office of Management and Budget. But on the other hand I certainly have no objection, and I do not understand that the committee would have objection. However, I would turn to the gentleman from California (Mr. SMITH) for his answer on that.

Mr. MAHON. I would say that in submitting the budget or any amendments to the budget or revisions in the budget outlook, it would seem that the President himself and not a subordinate officer should be the one to submit the information to Congress.

Mr. SMITH of California. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from California.

Mr. SMITH of California. Mr. Chairman, we discussed this I know at some time, but I would like to be sure that I myself am clear as to what the gentleman has in mind. Now, at the first of the year the President submits the budget; does he not?

Mr. MAHON. That is right.

Mr. SMITH of California. He personally does it?

Mr. MAHON. He personally does it.

Mr. SMITH of California. Now you have up above that on line 15 that the Secretary of the Treasury and the Director of the Office of Management and Budget shall transmit to the Congress. Does not the President then transmit that rather than these people, this supplemental information regarding the budget? What is the real purpose in that?

Mr. MAHON. The only purpose of my amendment is that since the President himself transmitted the original annual budget at the beginning of the session, then if the regular budget is to be amended or updated it should not be amended or updated by a subordinate official such as the Secretary of the Treasury or the Director of the Office of Management and Budget, but by the President himself.

As I say, it is a rather technical matter, but it seems to me to be important.

Mr. SMITH of California. Is it going to be necessary for the President himself to actually submit it, or is it just going to be transmitted, or how would we do it?

Mr. MAHON. The way he does it now. Under present law, only the President may amend his own budget. What I am saying is that with respect to the submission of the updating of the budget not later than June 1, the President, not a subordinate, should be the one to submit the updating to the Congress.

Mr. SMITH of California. What happens not later than June 1 of each year when they transmit such information to the Congress, do they now do that? Is that not new?

Mr. MAHON. We do not have that now, that is an innovation proposed in the pending bill.

Mr. SMITH of California. As I understand it, the committee put this in with the thought in mind that the Members would be able to get additional information by June 1 of each year as to what has happened or is happening to the budget during that period of time.

Mr. MAHON. That is correct, and the President would submit this updating with the authority of his office.

Mr. SMITH of California. But these people, the Secretary of the Treasury and the Director of the Office of Management and Budget, they are the ones that would be coming down here transmitting this and answering questions.

Mr. MAHON. Yes; I assume so, just as they now do when the President sends us his original budget early in the session.

Mr. SMITH of California. I do not want to get it to the place where we are going to have the President up here and have two whacks at him on the budget.

Mr. MAHON. I do not think there is any real difference between the gentleman from California and myself. The Secretary and the Director of the Office of Management and Budget do capable work, they draw up all of these documents, but they do so as representatives

of the President. But it is the President's budget, and it is the President's supplement to the budget, although the President never comes down and defends his own budget other than in connection with the State of the Union message when he often makes references to it.

So, there would not be any change from the system we now use. I would say that, in my judgment, the additional information sought to be elicited by this so-called midsession updating will be helpful by keeping the Congress informed as to significant changes in the overall budgetary outlook and situation generally.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. SMITH of California. Mr. Chairman, I ask unnanimous consent that the gentleman from Texas may proceed for 5 additional minutes.

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

Mr. SMITH of California. Your amendment is going to change line 13 to eliminate, "The Secretary of the Treasury and the Director of the Office of Management and Budget" and put "President" in there instead of those people; is that correct?

Mr. MAHON. That is right.

Mr. SMITH of California. What is this going to do when the budget revisions are transmitted down here on or before June 1?

Mr. MAHON. The President can send up a message transmitting it.

Mr. SMITH of California. Is he going to send Secretary Kennedy or how is it going to work?

Mr. MAHON. Just like it is done all the time. I do not happen to have one of his budget transmissions available at the moment, but budget transmissions—amendments and supplements to the original budget—always come from the President.

Mr. SMITH of California. We do not have supplemental transmissions or summaries now?

Mr. MAHON. Yes, we do. We have supplemental transmissions all the time. We had one yesterday. I would add that of course, we do not now have this so-called midsession budget updating sent down to us, because it is not yet called for by law.

Mr. GERALD R. FORD. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I am glad to yield to the gentleman.

Mr. GERALD R. FORD. It seems to me, we are trying to equate the original submission of the budget which a President sends up in January with a supplemental summary of the budget. It seems to me they are two basically different documents. The budget is that document from which the Congress operates in its consideration of the financial plan by the President.

I doubt if one could argue that a supplemental summary has the same status that the original budget document has. Therefore, it seems to me the original budget document which is the financial plan for the Government, as sent by the Chief Executive, is of a higher level and it should come from the President. Whereas, a budget supplementary summary could very properly come from the Secretary of the Treasury and the Director of the Office of Management and Budget. I think you can differentiate between the two, as the committee has recommended here.

Mr. MAHON. You could differentiate between the two, but the President submits his budget in January and the President submits amendments to the budget as the year proceeds. This midyear updating would be a submission encompassing all agencies of the Government, the whole of the budget. It would seem to me to be fundamentally unsound to undertake to delegate the updating function to subordinate officials. I just feel that the proper procedure is to keep the responsibility with the President. It would have the President sending to the Speaker and to the Vice President budget submissions of all kinds. That has been traditional in the past and I think we should keep it that way. This is not a matter of reform, but it is a matter of carrying on our consistent procedures of the past.

Mr. Chairman, I ask for a favorable vote on this amendment.

Mr. SISK. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I do not desire to oppose the amendment offered by the gentleman from Texas, but I still think there is some confusion or misunderstanding of what the committee sought to do here. What the language of section 221(b) seeks to do is to enforce the requirement that the President shall inform the Congress in January of his budget and of appropriations and expenditures for the upcoming year and estimates of amounts for the ensuing 4 fiscal years.

On or before June 1, the committee then requires that the Secretary of the Treasury and the Director of the Office of Management and Budget shall send the Congress up-to-date figures on the budget for the ensuing fiscal year, giving us information and commentary on what has occurred in the ensuing some 4 or 5 or 6 months.

Of course, technically the President is the head of the executive bureau of Government, and, I suppose, the term "President" could be used without necessarily changing the intent of the language.

But it certainly was my understanding, at the time the committee considered it, that in the area where we spoke of the Secretary of the Treasury and of the Director of the Office of Management and Budget, that we were actually seeking their personal appearance and their estimates after having gone through some 4 or 5 months of the fiscal year.

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. SISK. I am glad to yield to the gentleman.

Mr. MAHON. On page 53, beginning at line 14, we get the President back into the picture. Beginning on line 14 we say:

The President shall transmit to the Congress, on or before June 1 of each year, beginning with 1972, in such form and detail as he may determine—

Certain submissions he must make.

In January he submits his budget, traditionally. The committee bill proposes he submit a midyear report by June 1. In January he tells us he wants a certain amount of funds for expenditure. He estimates the expenditures and the revenues. Let us say that he estimates a $200 billion expenditure in January. Maybe in his midyear report, with the additional information which has become available, he finds conditions and the outlook have changed, causing him to change his estimate of expenditures for the fiscal year. Or, changing the revenue projections. That is very normal. It is inevitable. It always happens.

The President submits a budget of, say, $200 billion expenditures for the fiscal year in January. At that point the Congress and the public in general have the authoritative financial plan for the Federal Government. It is the President's budget. If then the President decides that circumstances require him to adjust his budget, it seems to me that the President should in his midyear report submit a change in the overall expenditure estimates. Nobody should be in a position to speak for the President in regard to such a fundamental reestimate of what may happen to expenditures of the Federal Government in a given fiscal year. It is the President's budget to begin with, and it requires the weight and authority of the Office of the President to give full legitimacy and credibility to changes in that budget.

Mr. SISK. If I might comment to the gentleman, it is my understanding that what the committee sought to do here was, in the first place to require the President to submit his initial budget and later to submit his supplementary budget. In addition to that, in this area that we are talking about, the Secretary of the Treasury and the Director of the Office of Management would be further required to make information available to the Congress on or before June 1 of each year. The theory is that they would submit to the Congress updated figures on the budget for the ensuing year. These figures shall be supplemental to the President's budget message in January and must contain substantial alterations in and new appraisals or estimates of expenditures, receipts, and so forth. So that was the reason why in one instance it says the President shall submit his budget, as he shall, of course, in January, and later on he shall submit a supplemental budget.

The CHAIRMAN. The time of the gentleman from California has expired.

(On request of Mr. MAHON, and by unanimous consent, Mr. SISK was allowed to proceed for 3 additional minutes.)

Mr. SISK. Mr. Chairman, I appreciate the request of the gentleman from Texas. Again, I do not find myself in substantial disagreement at all with what the gentleman has in mind. I have the feeling that the intent of the committee in connection with the responsibility of the officials concerned here in giving informa-

tion to the Congress is possibly being misunderstood. Whereas the President, as a matter of requirement, must submit both the initial budget and the supplementary budget, the additional requirement for the Secretary of the Treasury and the Director of the Office of Management is for further information to the Congress and supplementary to the President's submission.

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield to the gentleman from Texas.

Mr. MAHON. Mr. Chairman, in previous administrations, both Democratic and Republican, there has at times been a general hesitancy to release midyear budget readings, because too often they would show that the estimates in January were in error. I think the committee has done a great service requiring such a supplemental report. But that supplemental report should be transmitted to the Speaker under the authority of the President himself, because it is going to change the President's initial budget estimates of January. The transmittal message would say that the President's January estimate of expenditures and receipts are hereby modified as follows. It seems to me the President ought to carry out this function be he a Democrat or Republican, and not the Secretary of the Treasury or the Director of the Office of Management and Budget. I think the message would have more consistency and more validity coming from the President. This information which Members of Congress will quote and which will be used by the financial community of the Nation should be sent under the authority of the President and not somebody else.

Mr. SISK. Mr. Chairman, I have no objection to the amendment. I just want to make clear what we are doing.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas, Mr. MAHON.

The amendment was agreed to.

AMENDMENT OFFERED BY MR. PICKLE

Mr. PICKLE. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. PICKLE: On page 54, immediately below line 2, insert the following new section:

"CHANGE OF FISCAL YEAR

"SEC. 222. (a) Section 201 of the Budget and Accounting Act, 1921, as amended (31 U.S.C. 11), is further amended by adding at the end thereof the following new subsection:

"'(d) The fiscal year of the Treasury of the United States in all matters of accounts, receipts, expenditures, estimates, and appropriations shall commence on October 1 of each year.'.

"(b) Section 237 of the Revised Statutes of the United States (31 U.S.C. 1020) is repealed.

"(c) Notwithstanding any provision to the contrary in title V of this Act, the changes in existing law made by subsections (a) and (b) of this section shall take effect on October 1, 1973.

"(d) The fiscal year beginning July 1, 1972, shall end at the close of September 30, 1973. Notwithstanding any provision to the contrary in title V of this Act, the provisions of this subsection shall become effective on the date of enactment of this Act."

Mr. PICKLE. Mr. Chairman, this amendment would change the fiscal year from July 30 to September 30, and the new fiscal year then would start on October 1.

It has become apparent, I think, to every Member of the House that we have not been able to get authorizations and appropriations out by June 30, or at least to have them acted on. As a practical matter, we have not done this in years. So we must admit that the system under which we operate now is not working well or at least it could and should be able to work better. We simply cannot meet after the budget has been submitted, and wait for the authorization to be made, and then see action on the floor by June 30. For the last 2 or 3 years at least, we have had almost a chaotic situation. I would venture to say in the fiscal years 1968 and 1969 that we had only one or two of the appropriation bills finished by June 30.

If we are not getting action by that time, then it would seem to me something must give. We ought to find a better way to do business than we are doing at this point. I suggest that we change the fiscal year to September 30. If we did that and if we later got a recommendation that said the authorizations must be in by June 30 or earlier, then I think we could see a time specific to accomplish our task. We cannot do it now. We are not doing it. There is no chance under present operations to see any basic improvement.

So it seems to me we must have our fiscal year changed from our present date of June 30 to September 30, or possibly to the calendar year basis.

It was my understanding that the subcommittee had recommended in its original bill to change to the calendar year, and because there was some objection from other Members—I suppose some in respect to appropriation committee—for some reason they backed off and said, "We will not push it at this particular time."

I believe there are certain advantages to the calendar year proposal. Perhaps we must accept the fact that we cannot get our job done in the fiscal year, and we have to wait to the end of the calendar year to actually finish our work.

If we do change to a calendar year, that means we will be in session 12 months out of the year, and we will hear the Christmas bells on the Capitol steps every year while we are working on appropriation bills.

I would be agreeable to a calendar year in preference to what we have now, but it seems to me that hitting a middle ground of September 30 is a good compromise. I, therefore, urge this body to give serious consideration to changing the fiscal year to September 30.

The rest of the language of the bill, Mr. Chairman, simply gives us time to make the changeover. I understand the Bureau of the Budget has said if the fiscal year is to be changed they would need considerable time to adjust to it. The amendment I offer gives us 2½ to 3 years, actually, to make this kind of a changeover.

If any Member of the House believes we are doing our business properly now, and that we can get our appropriation bills out by the 30th, I should like to hear from him. I do not believe a Member can stand and say we are doing our job and will be done by this date.

If this is so, why do we not try to use some practical sense and say that we will change the fiscal year? If we do not do this, then we are going to be operating by continuing resolutions, supplementals and/or continuing resolutions. Perhaps that is what we are doing now. If that is the system Members want, then vote this down and keep doing business as usual.

I believe there is a better way to do it. The best way is to change the fiscal year to September 30. I, therefore, ask the committee to give a favorable vote on this amendment.

I have talked with Members of the Appropriations Committee. I understand there is general sympathy with the approach, that we need to make a change. I believe there is a stronger sympathy, however, that some want to drag this thing out a little further and see if the problem will not somehow improve. It has been getting worse in the past 25 years, and we ought to make a change.

Mr. CORMAN. Mr. Chairman, I rise in opposition to changing our fiscal year from the end of June to the end of September. I agree with the gentleman who offered the amendment that we can never anticipate legislating on the present-day budgets and concluding our work in an orderly fashion by June 30. I suggest we would have great difficulty doing it by September 30.

I supported the original proposal in the Rules Committee to go to the calendar year, and had anticipated making that motion. However, in view of the complexity of this change and in view of the necessity to work very closely with the chairman of the Appropriations Committee and the chairmen of the various authorizing committees and in view of the obvious necessity for having some timetable for getting the authorization work done prior to the appropriation work being concluded, I suggest that we defeat this amendment. We anticipate coming back here early in the next Congress with a carefully worked out plan which I hope will have the support of the chairman of the Appropriations Committee and chairmen of the authorizing committees, to go to a calendar year basis.

Mr. STEIGER of Wisconsin. Mr. Chairman, will the gentleman yield?

Mr. CORMAN. I yield to the gentleman from Wisconsin.

Mr. STEIGER of Wisconsin. I thank the gentleman for yielding and I want to associate myself with his remarks.

I am one of those prepared to join with the gentleman from California in supporting an amendment to change the fiscal year. Since then, however, I have had some serious reservations about it. It is a very difficult thing to do.

I believe the amendment offered by

the gentleman from Texas ought to be defeated, and I join the gentleman from California in hoping we can solve this problem.

Mr. CORMAN. I thank the gentleman.

Mr. PICKLE. Mr. Chairman, will the gentleman yield?

Mr. CORMAN. I yield to the gentleman from Texas.

Mr. PICKLE. I have introduced legislation to change the fiscal year for a number of years now, as many Members of the House have.

So far as I know, no consideration has ever been given to those measures. I assume they have been referred to the Committee on Government Operations, but wherever they have been referred to they have been swallowed up. Now, do we have any assurance that the Committee on Government Operations will give any consideration to changing the fiscal year? There has not been a tractor built in the United States large enough yet to move it 1 inch so far. What assurance do we have to think that some action can be given to it by merely tossing off the idea that we must consider it later? We do not have a more serious problem confronting us. I am surprised that there is not more support for this.

Mr. CORMAN. I do not know, and I have no commitment from the members of the committee. I have discussed it with members. I will have to say that it is my feeling after getting the sentiment as best I could the chances of getting the calendar year idea adopted at this time are very poor. Our chances might be increased particularly if the Committee on Appropriations chairman gave careful thought to it and we convinced him that some careful scheduling should be had on the part of the authorizing committees. Then he might have a more realistic assurance and his committee would have more ample time to act expeditiously if the authorizing bills were adopted, therefore, doing away with the necessity of his asking for waivers of points of order on so many of his bills, since his committee works even more vigorously than the authorizing committees.

Mr. PICKLE. I see the chairman of the Committee on Appropriations on the floor. If the gentleman will yield further, I hope he will address himself to this problem. I want to make it plain in offering my amendment that it is not offered as a criticism of the Committee on Appropriations. It is something all of us in the entire Congress must shoulder. We are tossing it off our backs here and saying that there might be a better time to discuss it later. I hope that the chairman of the committee can express himself on this matter.

The CHAIRMAN. The time of the gentleman from California has expired.

(By unanimous consent, at the request of Mr. MAHON, Mr. CORMAN was allowed to proceed for 3 additional minutes.)

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. CORMAN. I am pleased to yield to the chairman of the Committee on Appropriations.

Mr. MAHON. Mr. Chairman, the matter of changing the Federal fiscal year is a matter of very great importance. It took more than 100 years for practically all of the States to come into agreement on a common fiscal year with the Federal Government. All of the States now have June 30 as the end of the fiscal year with the exception of three. Before we undertake to change that fiscal year, we need to go into this question very exhaustively.

What would happen, in my judgment, if we changed the fiscal year without taking other remedial action is that we would not be completing most of our work until the last several weeks of the session. We would, I am fearful, have more and more delays, and too often we perhaps would not finish our work in the calendar year and thus would have to go over into the following year in order to finalize necessary legislation. Our interest is in trying to move the entire legislative program as rapidly as we reasonably can and as early as we can in the session. I would say that until substantial changes are made otherwise in our legislative system or habits, we certainly should not consider changing the fiscal year as the entire remedy to our problem of timeliness. I would think that that would be the proper stance to take at the moment if the Congress can work its will otherwise at a later date.

I thank the gentleman for yielding.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. CORMAN. I am happy to yield to the gentleman.

Mr. GROSS. I simply rise to commiserate with the gentleman from Texas (Mr. PICKEL) in his inability to move his bill or his amendment. I have had H.R. 144 kicking around here for years. That provides for a balanced budget with payments on the Federal debt. When the gentleman can find a block and tackle big enough to move his bill, however, I would like him to show it to me. I would like to use it.

Mr. CORMAN. I might say that if I thought we were going to pass H.R. 144 before we passed the change in the fiscal year, I would not be opposed to the gentleman from Texas at the moment.

Mr. Chairman, I yield back the balance of my time.

Mr. SISK. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I will only take a moment. The committee as I am sure my good friend, the gentleman from Texas knows, gave a great deal of thought and study to this subject. We had hearings, in fact, we had extensive hearings and we had the Bureau of the Budget here before us, and I might say they supported a change to a calendar year and the committee at one time put together language and we did have language tentatively as a part of this bill to change to the calendar year from the present fiscal year. It is a rather substantial task. It is rather complex. The Bureau of the Budget recommended it be done over a period of 3 years. The fact is that the committee after considerable discussion, and discussion with the distinguished gentleman from Texas (Mr. MAHON), the chairman of the Committee on Appropriations, decided to leave the matter out of this bill at the present time.

The gentleman from California (Mr. HOLIFIELD) has a great deal of interest in this question and there is presently in the Committee on Government Operations a bill pending calling for a change in the fiscal year to the calendar year, also some proposals that would limit the legislative committees and require that in connection with ongoing authorizations that they must have those authorizations in by I believe one calls for June 30 and another possibly August 1. And it was the desire of our subcommittee that this matter be at least for the present left with the Committee on Government Operations in the hope that it might be a matter that would be acted on in that committee.

Therefore, Mr. Chairman, I ask for the defeat of the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas (Mr. PICKLE).

The amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

PART 3—UTILIZATION OF REPORTS AND EMPLOYEES OF GENERAL ACCOUNTING OFFICE

ASSISTANCE BY GENERAL ACCOUNTING OFFICE TO CONGRESSIONAL COMMITTEES IN CONNECTION WITH PROPOSED LEGISLATION AND COMMITTEE REVIEW OF FEDERAL PROGRAMS AND ACTIVITIES

SEC. 231. At the request of any committee of the House or Senate, or of any joint committee of the two Houses, the Comptroller General shall explain to, and discuss with, the committee or joint committee making the request, or the staff of such committee or joint committee, any report made by the General Accounting Office which would assist such committee in connection with—

(1) its consideration of proposed legislation, including requests for appropriations, or

(2) its review of any program, or of any activity of any Federal agency, which is within the jurisdiction of such committee or joint committee.

DELIVERY BY GENERAL ACCOUNTING OFFICE TO CONGRESSIONAL COMMITTEES OF REPORTS TO CONGRESS

SEC. 232. Whenever the General Accounting Office submits any reports to the Congress, the Comptroller General shall deliver copies of such report to—

(1) the Committees on Appropriations of the House and Senate,

(2) the Committees on Government Operations of the House and Senate, and

(3) any other committee of the House or Senate, or any joint committee of the two Houses, which has requested information on any program or part thereof, or any activity of any Federal agency, which is the subject, in whole or in part, of such report.

FURNISHING TO CONGRESSIONAL COMMITTEES BY GENERAL ACCOUNTING OFFICE OF ITS REPORTS GENERALLY

SEC. 233. At the request of any committee of the House or Senate, or of any joint committee of the two Houses, the Comptroller General shall make available to such committee or joint committee a copy of any report of the General Accounting Office which was not delivered to that committee or joint committee under section 232 of this Act.

FURNISHING TO COMMITTEES AND MEMBERS OF CONGRESS BY GENERAL ACCOUNTING OFFICE OF MONTHLY AND ANNUAL LISTS OF ITS REPORTS; AVAILABILITY OF REPORTS TO COMMITTEES AND MEMBERS ON REQUEST

SEC. 234. The Comptroller General shall prepare, once each calendar month, a list of all reports of the General Accounting Office issued during the immediately preceding cal-

endar month, and, not less than once each calendar year, a cumulative list of all reports of the General Accounting Office issued during the immediately preceding twelve months, and transmit a copy of each such list of reports to each committee of the House or Senate, each joint committee of the two Houses, each Member of the House or Senate, and the Resident Commissioner from Puerto Rico. At the request of any such committee, joint committee, Member of the House or Senate, or the Resident Commissioner from Puerto Rico, the Comptroller General promptly shall transmit or deliver to that committee, joint committee, Member of the House or Senate, or the Resident Commissioner, as the case may be, a copy of each report so listed and requested.

ASSIGNMENTS OF EMPLOYEES OF GENERAL ACCOUNTING OFFICE TO DUTY WITH COMMITTEES OF CONGRESS

SEC. 235 (a) Notwithstanding any other provision of law, the Comptroller General may not assign or detail any employee of the General Accounting Office to full-time duty on a continuing basis with any committee of the Senate or House of Representatives or with any joint committee of Congress for any period of more than one year.

(b) The Comptroller General shall include in his annual report to the Congress the following information—

(1) the name of each employee assigned or detailed to any committee of the Senate or House of Representatives or any joint committee of Congress;

(2) the name of each committee or joint committee to which each such employee is assigned or detailed;

(3) the length of the period of such assignment or detail of such employee;

(4) a statement as to whether such assignment or detail is finished or is currently in effect; and

(5) the pay of such employee, his travel, subsistence, and other expenses, the agency contributions for his retirement and life and health insurance benefits, and other necessary monetary expenses for personnel benefits on account of such employee, paid out of appropriations available to the General Accounting Office during the period of the assignment or detail of such employee, or, if such assignment or detail is currently in effect, during that part of the period of such assignment or detail which has been completed.

Mr. SISK (during the reading). Mr. Chairman, I ask unanimous consent that part 3 of title II be considered as read, printed in the RECORD and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

The CHAIRMAN. Are there any amendments to part 3 of title II? If not, the Clerk will read.

The Clerk read as follows:

PART 4—THE APPROPRIATIONS PROCESS

RULEMAKING POWER OF SENATE AND HOUSE

SEC. 241. The following sections of this Part are enacted by the Congress—

(1) insofar as applicable to the Senate, as an exercise of the rulemaking power of the Senate and, to the extent so applicable, those sections are deemed a part of the Standing Rules of the Senate, superseding other individual rules of the Senate only to the extent that those sections are inconsistent with those other individual Senate rules, subject to and with full recognition of the power of the Senate to enact or change any rule of the Senate at any time in its exercise of its constitutional right to determine the rules of its proceedings; and

(2) insofar as applicable to the House of Representatives, as an exercise of the rulemaking power of the House of Representatives, subject to and with full recognition of the power of the House of Representatives to enact or change any rule of the House at any time in its exercise of its constitutional right to determine the rules of its proceedings.

HEARINGS ON THE BUDGET BY COMMITTEES ON APPROPRIATIONS OF SENATE AND HOUSE

SEC. 242. (a) Each hearing conducted by the Committee on Appropriations of the Senate shall be open to the public except when the committee determines that the testimony to be taken at that hearing may relate to a matter of national security, may tend to reflect adversely on the character or reputation of the witness or any other individual, or may divulge matters deemed confidential under other provisions of law or Government regulation. Whenever any such hearing is open to the public, that hearing may be broadcast by radio or television, or both, under such rules as the committee may adopt.

(b) The Committee on Appropriations of the Senate shall within thirty days after the transmittal of the Budget to the Congress each year, hold hearings on the Budget as a whole with particular reference to—

(1) the basic recommendations and budgetary policies of the President in the presentation of the Budget; and

(2) the fiscal, financial, and economic assumptions used as bases in arriving at total estimated expenditures and receipts.

(c) In holding hearings pursuant to subsection (b), the committee shall receive testimony from the Secretary of the Treasury, the Director of the Bureau of the Budget, the Chairman of the Council of Economic Advisers, and such other persons as the committee may desire.

(d) Hearings pursuant to subsection (b) shall be held in open session, except when the committee determines that the testimony to be taken at that hearing may relate to a matter of national security. A transcript of all such hearings shall be printed and a copy thereof furnished to each Member of the Senate.

(e) Hearings pursuant to subsection (b), or any part thereof, may be held before joint meetings of the Committee on Appropriations of the Senate and the Committee on Appropriations of the House of Representatives in accordance with such procedures as the two committees jointly may determine.

(f)(1) Section 138 of the Legislative Reorganization Act of 1946 (2 U.S.C. 190e) is repealed.

(2) Title I of the table of contents of the Legislative Reorganization Act of 1946 (60 Stat. 813) is amended by striking out—

"Sec. 138. Legislative Budget.".

(g)(1) Clause 27(g) of Rule XI of the Rules of the House of Representatives is amended to read as follows:

"(g)(1) The Committee on Appropriations shall, within thirty days after the transmittal of the Budget to the Congress each year, hold hearings on the Budget as a whole with particular reference to—

"(A) the basic recommendations and budgetary policies of the President in the presentation of the Budget; and

"(B) the fiscal, financial, and economic assumptions used as bases in arriving at total estimated expenditures and receipts.

"(2) In holding hearings pursuant to subparagraph (1) of this paragraph, the committee shall receive testimony from the Secretary of the Treasury, the Director of the Bureau of the Budget, the Chairman of the Council of Economic Advisers, and such other persons as the committee may desire.

"(3) Hearings pursuant to subparagraph (1) of this paragraph shall be held in open session, except when the committee determines that the testimony to be taken at that hearing may relate to a matter of national security. A transcript of all such hearings shall be printed and a copy thereof furnished to each Member and the Resident Commissioner from Puerto Rico.

"(4) Hearings pursuant to subparagraph (1) of this paragraph, or any part thereof, may be held before joint meetings of the committee and the Committee on Appropriations of the Senate in accordance with such procedures as the two committees jointly may determine.".

(2) Clause 27(f) of Rule XI of the Rules of the House of Representatives, as amended by this Act, is further amended by adding at the end thereof the following new subparagraph:

"(6) The preceding provisions of this paragraph do not apply to hearings on the Budget by the Committee on Appropriations under paragraph (g) of this clause.".

ACTION AND PROCEDURE OF SENATE COMMITTEE ON APPROPRIATIONS

SEC. 243. The vote of the Committee on Appropriations of the Senate to report a measure or matter shall require the concurrence of a majority of the members of the committee who are present. No vote of any member of such committee to report a measure or matter may be cast by proxy if rules adopted by such committee forbid the casting of votes for that purpose by proxy; however, proxies shall not be voted for such purpose except when the absent committee member has been informed on the matter on which he is being recorded and has affirmatively requested that he be so recorded. Action by such committee in reporting any measure or matter in accordance with the requirements of this section shall constitute the ratification by the committee of all action theretofore taken by the committee with respect to that measure or matter, including votes taken upon the measure or matter or any amendment thereto, and no point of order shall lie with respect to that measure or matter on the ground that such previous action with respect thereto by such committee was not taken in compliance with such requirements. Whenever such committee by rollcall vote reports any measure or matter, the report of the committee upon such measure or matter shall include a tabulation of the votes cast in favor of and the votes cast in opposition to such measure or matter by each member of the committee. Nothing contained in this section shall abrogate the power of the committee to adopt rules—

(1) providing for proxy voting on all matters other than the reporting of a measure or matter, or

(2) providing in accordance with the Standing Rules of the Senate for a lesser number as a quorum for any action other than the reporting of a measure or matter.

Mr. SISK (during the reading). Mr. Chairman, I ask unanimous consent that part 4 of title II be considered as read, printed in the RECORD and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

COMMITTEE AMENDMENTS

The CHAIRMAN. The Clerk will report the first committee amendment.

The Clerk read as follows:

Committee amendment: On page 59, line 13, strike "Bureau of the" and insert "Office of Management and".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: Page 61, line 2, strike "Bureau of the" and insert the words "Office of Management and".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

PART 5—LEGISLATIVE COMMITTEES

RULEMAKING POWER OF SENATE AND HOUSE

SEC. 251. The following sections of this Part are enacted by the Congress—

(1) insofar as applicable to the Senate, as an exercise of the rulemaking power of the Senate and, to the extent so applicable, those sections are deemed a part of the Standing Rules of the Senate, superseding other individual rules of the Senate only to the extent that those sections are inconsistent with those other individual Senate rules, subject to and with full recognition of the power of the Senate to enact or change any rule of the Senate at any time in its exercise of its constitutional right to determine the rules of its proceedings; and

(2) insofar as applicable to the House of Representatives, as an exercise of the rulemaking power of the House of Representatives, subject to and with full recognition of the power of the House of Representatives to enact or change any rule of the House at any time in its exercise of its constitutional right to determine the rules of its proceedings.

COST ESTIMATES IN REPORTS OF SENATE AND HOUSE COMMITTEES ACCOMPANYING CERTAIN LEGISLATIVE MEASURES

SEC. 252. (a)(1) The report accompanying each bill or joint resolution of a public character reported by any committee of the Senate (except the Committee on Appropriations) shall contain—

(A) an estimate, made by such committee, of the costs which would be incurred in carrying out such bill or joint resolution in the fiscal year in which it is reported and in each of the five fiscal years following such fiscal year (or for the authorized duration of any program authorized by such bill or joint resolution, if less than five years), except that, in the case of measures affecting the revenues, such reports shall require only an estimate of the gain or loss in revenues for a one-year period; and

(B) a comparison of the estimate of costs described in subparagraph (A) made by such committee with any estimate of costs made by any Federal agency; or

(C) in lieu of such estimates or comparison, or both, a statement of the reasons why compliance by the committee with the requirements of subparagraph (A) or (B), or both, is impracticable.

(2) It shall not be in order in the Senate to consider any such bill or joint resolution if such bill or joint resolution was reported in the Senate after the effective date of this subsection and the report of that committee of the Senate which reported such bill or joint resolution does not comply with the provisions of paragraph (1) of this subsection.

(3) For the purposes of this subsection, the members of the Joint Committee on Atomic Energy who are Members of the Senate shall be deemed to be a committee of the Senate.

(b) Rule XIII of the Rules of the House of Representatives is amended by adding at the end thereof the following new clause:

"7. (a) The report accompanying each bill or joint resolution of a public character reported by any committee shall contain—

"(1) an estimate, made by such committee, of the costs which would be incurred in carrying out such bill or joint resolution in the fiscal year in which it is reported and in each of the five fiscal years following such fiscal year (or for the authorized duration of any program authorized by such bill or joint resolution, if less than five years), except that, in the case of measures affecting the revenues, such reports shall require only an estimate of the gain or loss in revenues for a one-year period; and

"(2) a comparison of the estimate of costs described in subparagraph (1) of this paragraph made by such committee with any estimate of such costs made by any Government agency and submitted to such committee.

"(b) It shall not be in order to consider any such bill or joint resolution in the House if the report of the committee which reported that bill or joint resolution does not comply with paragraph (a) of this clause.

"(c) For the purposes of this clause, the members of the Joint Committee on Atomic Energy who are Members of the House shall be deemed to be a committee of the House.

"(d) For the purposes of subparagraph (2) of paragraph (a) of this clause, a Government agency includes any department, agency, establishment, wholly owned Government corporation, or instrumentality of the Federal Government or the government of the District of Columbia.

"(e) The preceding provisions of this clause do not apply to the Committee on Appropriations, the Committee on House Administration, the Committee on Rules, and the Committee on Standards of Official Conduct.".

APPROPRIATIONS ON ANNUAL BASIS

SEC. 253. (a) Each committee of the Senate (except the Committee on Appropriations), and each joint committee of the two Houses of Congress, which is authorized to receive, report, and recommend the enactment of, bills and joint resolutions shall, in its consideration of all bills and joint resolutions of a public character within its jurisdiction, endeavor to insure that—

(1) all continuing programs of the Federal Government and of the government of the District of Columbia, within the jurisdiction of such committee or joint committee, are designed; and

(2) all continuing activities of Federal agencies, within the jurisdiction of such committee or joint committee, are carried on;

so that, to the extent consistent with the nature, requirements, and objectives of those programs and activities, appropriations therefor will be made annually.

(b) Each committee of the Senate (except the Committee on Appropriations), and each joint committee of the two Houses of Congress, which is authorized to receive, report, and recommend the enactment of, bills and joint resolutions with respect to any continuing program within its jurisdiction for which appropriations are not made annually, shall review such program, from time to time, in order to ascertain whether such program could be modified so that appropriations therefor would be made annually.

(c) Clause 28 of Rule XI of the Rules of the House of Representatives, as amended by this Act, is further amended by adding at the end thereof the following new paragraphs:

"(d) Each standing committee of the House shall, in its consideration of all bills and joint resolutions of a public character within its jurisdiction, endeavor to insure that—

"(1) all continuing programs of the Federal Government, and of the government of the District of Columbia, within the jurisdiction of that committee, are designed; and

"(2) all continuing activities of Government agencies, within the jurisdiction of that committee, are carried on;

so that, to the extent consistent with the nature, requirements, and objectives of those programs and activities, appropriations therefor will be made annually. For the purposes of this paragraph, a Government agency includes the organizational units of government listed in paragraph (d) of clause 7 of Rule XIII.

"(e) Each standing committee of the House shall review, from time to time, each continuing program within its jurisdiction for which appropriations are not made annually in order to ascertain whether such program could be modified so that appropriations therefor would be made annually.".

Mr. SISK (during the reading). Mr. Chairman, I ask unanimous consent that part 5 of title II be considered as read, printed in the RECORD and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. SISK. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the Chair (Mr. NATCHER), Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee having had under consideration the bill (H.R. 17654) to improve the operation of the legislative branch of the Federal Government, and for other purposes, had come to no resolution thereon.

SIXTH ANNUAL REPORT OF ATLANTIC-PACIFIC INTEROCEANIC CANAL STUDY COMMISSION—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER laid before the House the following message from the President of the United States which was read, and, together with the accompanying papers, referred to the Committee on Merchant Marine and Fisheries:

To the Congress of the United States:

I am transmitting the sixth annual report of the Atlantic-Pacific Interoceanic Canal Study Commission covering its activities through June 30, 1970.

The Commission is now developing its final report for submission on or before December 1, 1970, and only a brief letter report is forwarded at this time in conformance with the provisions of Public Law 88–609, as amended.

RICHARD NIXON.

THE WHITE HOUSE, *September 15, 1970.*

PERSONAL ANNOUNCEMENT

Mr. LOWENSTEIN. Mr. Speaker, I would like to announce that yesterday I was absent from the House on official business. Had I been present, I would have voted "yea" on rollcall No. 295.

The SPEAKER pro tempore. The gentleman's statement will be included in the RECORD.

THE NEED FOR A MODIFIED RULE ON TRADE BILL

(Mr. VANIK asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. VANIK. Mr. Speaker, perhaps I am doing a vain thing, but this is the fourth time that I will urge the Rules Committee to approve a modified-closed rule on a bill coming from the Ways and Means Committee.

I expect to ask the Rules Committee to permit the House of Representatives to strike out any section of the trade bill which it finds objectionable. I do not suggest that a trade bill can be written on the floor, I simply suggest that the legislation can be substantially modified and, perhaps, be made acceptable, if the Members of the House have the privilege of voting on certain individual sections which are highly controversial and objectionable.

I strongly oppose the section of this bill—section 104—which freezes into law the oil import quota policy which costs the consumers of America between $5 and $7 billion per year by the Government's own figures.

I strongly oppose the entire title relating to the Domestic International Sales Corp. which will cost the Treasury $630 million in a full year. The staff of the Joint Committee on Internal Revenue Taxation estimates that this title will really cost the taxpayers $720 to $955 million per year without any guarantees of additional exports. The weakness of this proposal is that it provides a tax writeoff for giant corporations on the basis of present export efforts.

These two proposals constitute the most inflationary legislative actions of this session.

A little over a year ago, we were before the Rules Committee with a monumental tax reform bill to close tax loopholes. Today, we are there with a monumental loophole—securely frozen into a conglomerate bill with some items which are desirable.

Conglomerate legislation of this type has no place in a modern legislative body. The closed rule is a crutch for bad legislation. It protects a labyrinth of folly.

A closed rule insults the dignity of every Member of the House. A closed rule threatens the future of the legislative committee which leans on it and the power of the Rules Committee which grants it. Time is running out on this kind of legislative shenanigan.

The closed rule in the House of Representatives, which protects conglomerate bills from modification or improvement, is one of the most arbitrary and indefensible procedures in the House. It provides a shelter for special interest legislation which "sneaks" into the law of the land. It should be abolished.

I hope I can participate in bringing about a change in the rules in the next Congress which will prevent "closed" rules.

THE FAA AND NOISE—DOMAIN OF SPECIAL INTERESTS

(Mr. CHARLES H. WILSON asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and to include extraneous matter.)

Mr. CHARLES H. WILSON. Mr. Speaker, the Federal Aviation Administration is derelict in its duties owed to the American people. Apparently special interest groups have greater weight in the decisionmaking processes of that agency than does the general public. It is my naive belief that the FAA should not only assist the aviation industry but should also protect the public. While I gladly realize that these two roles are not necessarily exclusive, someone should let the FAA know that as well.

Latest in a series of sellouts of the needs of ordinary citizens is the FAA's refusal to cooperate with the city of Inglewood, Calif.'s, noise abatement program. By passing the bureaucratic buck between themselves and the FCC on the latest request, they are effectively making local antinoise pollution efforts ineffective.

Over the past few years, I have continually attempted to see promulgation of both legislation and agency regulations that would combat noise pollution and end the harm that accompanies it. My efforts have not been marked by glowing successes. As a Member whose congressional district includes major aerospace firms, it may seem strange that I voice my criticism of them in regard to jet noise so strongly and so often. But they and airline companies and engine manufacturers have also been remiss in their duty owed to the public. While it is true that the manufacturers are attempting to produce quieter engines, the fact that the FAA has not gotten tough with them has naturally allowed them to place a lower priority on antinoise research than should be placed upon it. Both the FAA and the aircraft industry had better realize that the people are not going to stand for the irresponsible treatment of this problem that has typified their past actions.

Another test of special interests versus John Q. Public is coming up shortly. The FAA has asked for comment on an advanced notice of proposed rulemaking regarding civil supersonic aircraft noise certification standards. Among others, the city of Inglewood, already severely affected by aircraft noise, has carefully considered the proposed rule and has made recommendations to the FAA. It is evident that with the advent of the SST, and in the absence of strict regulation of noise, Inglewood and many other cities located in close proximity to large international airports, will be even more severely affected by the noise which will be generated by the supersonic planes.

To put it mildly, I have raised objections to funding development of the SST on ecological grounds as well as economic principles since the program was pushed on the Congress. Pollution is killing us all. We must act with that fact in mind, regardless of the profit and loss mentality of certain firms and their shills at the FAA. On a greater ledger than mere business accounts, air and noise pollution must be entered on the loss side in blood red.

For my colleagues information, I now include in the RECORD, the recommendations of the city of Inglewood regarding noise type certification standards. Hopefully, the FAA will take cognizance of their suggestions and objectively analyze them. Or am I still being naive?

The insert follows:

CITY OF INGLEWOOD, CALIF.,
August 20, 1970.

FEDERAL AVIATION ADMINISTRATION,
Office of the General Counsel,
Washington, D.C.

GENTLEMEN: You have asked for public comment on an Advanced Notice of Proposed Rule Making regarding civil supersonic aircraft noise type certification standards. (Docket No. 10494; Notice 70-33). Contained herein are the recommendations of the City of Inglewood.

You say that a central question is the precise role that economic and technological factors should play in the type certification of supersonic aircraft. In our opinion, the method of financing and the economic viability of the SST are sufficiently questionable, the benefits to be gained accrue to such a select few, and the overall program is so costly to everyone, that environmental considerations should be given much greater weight in basic decisions regarding this aircraft.

Furthermore, the SST will no doubt use many of today's airports. All these airports already have a severe aircraft noise problem. Massive land use changes will undoubtedly prove less feasible economically than quieting of the engine, plus being much more disruptive to the lives of people.

In answer to your closely related question of economic incentives, the City of Inglewood advocates raising passenger fares and freight rates *NOW* for the specific purpose of abating noise from present aircraft. We think people will pay higher fares; we think the CAB and/or Congress should allow or mandate higher fares for this purpose; and we think it is the responsibility of the airlines to reduce their existing pollution before venturing on a new program at the expense of the citizens of the country. We suggest taking care of today's problem first, then getting on with the SST—not until the current problems are at least underway to solution.

Actually, to be realistic you should be requesting comments on three rules: aircraft certification, airport certification, and aircraft operations. The aircraft noise problem cannot be separated from the lives of people living around airports and affected by actual aircraft operations.

Our specific recommendations are based on criteria which we consider to be the maximum noise that is reasonable to a person living under or near the flight paths to major airports. These criteria are:

75 dBA—Maximum outdoor flyover noise consistent with reasonable sleeping conditions inside a non-accoustically treated house or apartment.

85 dBA—Maximum outdoor flyover noise consistent with outdoor activities in single-family neighborhoods. Homes should be, accoustically treated if the sound level exceeds 75 dBA.

90 dBA—Maximum noise level consistent with the minimum outdoor activity associated with certain types of apartments. Apartments should be accoustically treated if the sound level exceeds 75 dBA.

RULE NO. 1 AIRCRAFT NOISE CERTIFICATION

In contrast to the way Part 36 of the Federal Aviation Regulations is written, we prefer the dBA unit for measurement of aircraft noise. Instruments for making this kind of a noise measurement are much less expensive than the equipment required for calculation of EPNdB, and thereby saves the taxpayer money at all governmental levels. Also, the correlation between subjective re-

sponse and "A" weighted noise levels is almost as good as the correlation with EPNdB. However, we do recognize the slight advantage of EPNdB in reducing spectral irregularities. Therefore, we suggest that the certification rule be written in terms of both dBA and EPNdB. The EPNdB specification is perhaps more crucial to the certification process, but the dBA specification will allow simple and inexpensive enforcement of the operating rule. We must assume, of course, that enforcement is indeed intended.

From discussions with some of the designers of aircraft engines, we understand that the measurement locations specified in the present Part 36 are too close to the airport. Much better noise reduction could be attained for the majority of people affected if the noise reduction techniques were optimized for locations slightly farther away from the airport. We agree with this concept and it is contained in our recommendations which follow. Also, this will allow noise levels to be established which are lower than those previously established for subsonic aircraft, and which are more consistent with reasonable levels for residential life.

Our recommended noise limits are:

75 dBA (88 EPNdB) on approach at two nautical miles from the runway threshold.

75 dBA (88 EPNdB) on takeoff at four nautical miles from brake release.

75 dBA (88 EPNdB) at 0.5 mile nautical miles to the side.

If vertical navigation equipment is available and procedures have been established and certified for its use on approach down to category I weather minimums, then these procedures should be allowed in lieu of a 3° glide slope. This will allow the manufacturer or airline more flexibility in meeting the levels recommended above. Power cutbacks on takeoff should be allowed provided that it is not reduced beyond that power setting which would maintain level flight in the event of the failure of one engine, or which will maintain a 500 foot per minute rate of climb, whichever power setting is greater.

RULE NO. 2: AIRPORT CERTIFICATION

All airports should be required to be certified with respect to noise compatibility with surrounding neighborhoods. The airport operator and airlines should be required to cooperate in the soundproofing of residences within the 75 dBA contours for the new aircraft. This should be done in consultation with state and local governments. This type of rule will be additional economic incentive for airlines to specify aircraft with low noise levels.

RULE NO. 3: AIRCRAFT OPERATION

This rule should state that aircraft operating into and out of United States' airports must use that procedure which was used for noise certification, except where safety dictates otherwise or a different procedure will create *less* noise over residential areas. Airport authorities may use the dBA standard specified in Rule No. 1 to verify adherence to these procedures.

The City of Inglewood is perhaps uniquely qualified to make recommendations on these proposed rules. We have been faced with the aircraft noise problem for some time, and have undertaken a comprehensive and constructive approach to achieve a solution. The above recommendations were developed primarily by Mr. Randy Hurlburt, a professional acoustical engineer on the City staff, whom we have hired primarily for the purpose of helping us reduce noise pollution. Mr. Hurlburt is also an aeronautical engineer and an instrument rated pilot, and has given considerable thought to what is reasonable, safe, and proper.

If you will adopt our recommendations in substantially unaltered form, I think you will find that the air transportation industry will no longer be faced with the tremendous problem it now has in expanding existing airports and locating new ones. You will also be doing a great service to those people who live in the vicinity of this country's airports.

Sincerely,

DOUGLAS W. AYRES,
City Administrator.

THE LATE JOHN A. McELVENEY

(Mr. STRATTON asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. STRATTON. Mr. Speaker, I am deeply saddened by the news that our very good friend and the assistant bill clerk of the House, Jack McElveney, passed away suddenly over the weekend just a month short of his 77th birthday.

Jack McElveney came from my own area of upstate New York, from the capital city of Albany. Jack came down here from Albany 49 years ago, in March 1921, as an assistant to the late Representative Peter V. Ten Eyck of Albany, and then later served in the same capacity with the late Representative Parker Corning of Albany. After that Jack served with the late Senator Jim Mead of New York while he still served as a Member of the House, and thereafter he became the bill clerk of the House.

In a very real sense, Jack McElveney's life was the House of Representatives. So devoted was he to it, indeed, that although he retired on pension some 5 years ago, he missed his service here so much that he came back here voluntarily and renewed his earlier tasks without compensation until his death.

Jack McElveney was the man who took the bills that we all introduce into the legislative hopper, took them out of the box and started them on their way through the legislative mill.

Mr. Speaker, we will all miss Jack McElveney, his smiling face and his eager interest on its affairs of this House and in the concerns of its Members.

I shall also miss Jack in a very special way, Mr. Speaker. I have known him personally, of course, throughout my 12 years here in this House. But he was a neighbor of mine, never an actual constituent. But last January, when the State legislature redistricted the State of New York, broke up my present district, and attached my home city of Amsterdam to Schenectady and Albany Counties, Jack McElveney expressed his pleasure that at long last I would be running for reelection in his home city of Albany and he would now be able to support me. We chatted frequently about the prospects for this fall and for the future. I was deeply grateful for Jack's encouragement and his courtesy.

Here was a true gentleman of the House, Mr. Speaker, a man who dedicated his whole life to the legislative process. I salute him for his accomplishments and shall miss him here in this Chamber.

COMMENDING PRESIDENT FOR INITIATING PEACE PROPOSAL FOR THE MIDDLE EAST

(Mr. DERWINSKI asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. DERWINSKI. Mr. Speaker, I take the time of the House to commend President Nixon for taking the initiative in working for a peace proposal for the Middle East. We should all hope that the ceasefire in the Middle East will advance the prospects for a lasting peace.

A fundamental interest of the United States in the Middle East is to insure that the integrity of all nations in the area will be preserved and that the Soviet Union should not be permitted to extend its tentacles into that geographic section.

Bringing the parties directly involved to recognize the necessity of negotiating, and to get that process started, represents a tremendous forward step. However, it will be necessary to use patience and imagination to keep meaningful diplomatic contacts to overcome the legitimate concern that the Israeli Government has toward Soviet manipulation of radical Arab governments and Red military support of radical refugee organizations.

Mr. Speaker, in my opinion, the only description that fits the Middle East is that of a most explosive trouble spot because of the continuing possibility of renewed hostilities between Israel and her neighbors, and the potential for a confrontation between the United States and the Soviet Union.

May I further emphasize, Mr. Speaker, that the wave of hijacking while directly related to the Middle East crisis has grave international complications that could well erupt in other areas unless firmly dealt with by all the governments whose territory has thus far been involved in these areas.

LABOR DAY SPEECH OF I. W. ABEL, PRESIDENT OF THE UNITED STEELWORKERS OF AMERICA

(Mr. GAYDOS asked and was given permission to address the House for 1 minute, to revise and extend his remarks and to include extraneous material.)

Mr. GAYDOS. Mr. Speaker, on Monday, September 7, I. W. Abel, president of the United Steelworkers of America and vice president of the AFL–CIO, delivered a special Labor Day radio message over the National Broadcasting Co., radio network.

This message is most timely and should receive the critical attention of all Members of Congress. Mr. Abel has dedicated a lifetime not only to the labor movement, but has expanded labor's influence into many sensitive social areas which have been most beneficial to all Americans.

At this time, I submit for the CONGRESSIONAL RECORD the text of Mr. Abel's message for the benefit of my colleagues who did not have the opportunity to hear the broadcast.

LABOR DAY SPEECH OF I. W. ABEL

On behalf of the United Steelworkers of America, on this Labor Day 1970, I extend warmest fraternal greetings to my fellow Steelworkers and all members of organized labor . . . and best wishes to the many friends of Labor in the United States.

It is traditional on this uniquely American

holiday, for the labor movement to pause and take stock . . . to count our blessings . . . to savor the accomplishments . . . and to ponder some of our current concerns.

There is no doubt that we have many reasons to be grateful as we celebrate Labor Day this year. For those of us who have been a part of the labor movement for many years, our progress has been truly phenomenal.

We have gained benefits and protections for union members that not only were unheard of 20 and 30 years ago; they weren't even dreamed of.

We remember only too well when workers were treated with less regard than the machines they manned and the tool with which they worked; when workers were worked as hard as possible at the lowest rates possible; when a man often had to trade his dignity for a pay check.

The younger union members of today do not have the benefit of that kind of perspective so it is more difficult for them to have the same sense of union pride that the veteran members have.

They accept the fact of paid vacations, yet paid vacations did not exist for many workers until after their unions had been organized and won the right to paid vacations in negotiations. Pensions, too, are accepted as part of the job. But they were not always accepted as going with the job. In 1947, for example, the Steelworkers had to strike for 42 days to win pensions for our members employed in the basic steel industry. Now, we not only have the highest pensions in our history, we have negotiated vacation bonuses of $30 a week and also what we call a "widow's pension," to provide retirement income for surviving spouses.

Yes, these and many other benefits were not even pipe dreams in the beginning . . . hospital insurance . . . jury pay . . . supplemental unemployment benefits . . . paid holidays . . . paid funeral leave . . . payment of doctor's visits . . . extended vacation of 13 weeks . . . protection of the earnings of workers affected by technological change.

But our record of accomplishment does not stop at the union plant or the union hall or the union home. In fact, labor's efforts have benefited more people who are not union members. It was labor that pressed for free public schools. It was labor that forced the abolition of child labor. It was labor that forced the shortening of the working day.

In helping to promote the general welfare, unions have consistently called for adequate aid to education at all levels; consumer protection; tax reform; elimination of poverty; clean air and clean water; adequate Social Security payments; medical cares for all regardless of income, recent minimum wage levels and much more that time does not permit to enumerate, but all aimed at promoting the general welfare.

I would say that no other single organization has devoted as much of its time, money and effort to lift the level of life for all the people as has the labor movement of the United States.

But intruding upon labor's sense of pride and accomplishment are some problems which are cause for concern for the American worker. First, the worker today knows that he is being squeezed by the twin evils of recession and inflation. And adding to his sense of anger and frustration is the fact that the Nixon Administration views his plight with academic detachment and no visible proof of concern.

Our free enterprise system is supposed to function for the benefit of all; not just a majority, silent or otherwise. But it has not been functioning for the benefit of all. So we have wound up with the worst possible combination of developments—the most severe inflation in 20 years, the highest interest rates in 100 years and the sharpest increase in unemployment in 10 years. Since July of last year, unemployment has risen by 1.3 million and it is expected to go higher.

But all Americans, not just workers, are being put through the economic wringer. Living costs have risen from 4.2 percent in 1968 to 5.4 percent in 1969 and about six percent since last December.

Wage and salary earners are suffering additional blows in the form of cuts in working hours and by layoffs. In June the average work week in manufacturing was down to its lowest level since the recession year of 1961. The buying power of weekly earnings, after Federal taxes, was less in June than it was five years earlier in 1965.

And so we have the worker being squeezed on one hand by ever increasing prices and being battered on the other by decreasing purchasing power. Yet many say it is the worker who has caused his own plight by his wage hikes.

But those who would point the finger of blame at unions ignore the fact which show that the inflation of the 1960's has been largely a profit inflation—combined with a credit inflation in the past 19 months. For example, corporate profits after taxes soared 93 percent from 1960 through the first half of 1969. But during this time the real buying power of the average non-supervisory worker went up only 10 percent and his after-Federal tax take-home pay was up only 34 percent.

In short, profits zoomed much higher and faster than wages. The result: Workers did not share fairly in industry's record profits. And neither did the consumer because industry refused to hold the price line, which it could have done and still made very large profits.

Then came the Nixon Administration, with its tight money policy which jacked up interest rates, increased prices all along the line and caused production cutbacks, with resulting unemployment. This is the wrong way to right our economic wrongs.

Organized labor has repeatedly urged the Government to adopt selective, pinpointed measures to curb the specific causes of inflation. We have urged the President to use the stand-by power given him by Congress to curb the specific causes of credit inflation, to impose interest rate ceilings and expand credit for needed housing, public facilities and regular business operations. We also have said that Government action is needed to curb the ability of the country's major corporations to increase prices and to curtail the increasing concentration of economic power.

However, the President appears determined to stick by his "game plan" of tight money and unemployment. The harsh truth is that the Administration—and many others—regard the worker as expendable in the fight against inflation.

This philosophy of the expendability of the American worker also carries over into the area of safety and health on the job. Eighty-million American working men and women fight a losing war every day against death and injury on the job. More Americans are killed at work than in Vietnam. The costs of accidents and deaths are staggering. Each year 14,000 workers are killed, two million are disabled and seven million are injured. Each year $1.5 billion is lost in wages; $600 million in medical costs; $6.8 billion lost to the national economy. Yet, the Nation still lacks effective occupational health and safety legislation. An effective proposal is pending in the present Congress but Big Business is lining up its biggest guns to shoot it down.

One would think there would be no difficulty in obtaining effective legislation where lives are concerned. But, here again, too many believe the worker is expendable, that it is not worth the money to do what should be done to make his workplace safe and healthy, too many who give a higher priority to saving money than to saving life. But these selfish voices of special interests must be drowned out by demands upon Congress for prompt passage of a bill which will do the job—the bill recently approved by the House Education and Labor Committee. It's known as the Daniels Bill and it has the official endorsement of the labor movement. I can't think of a more appropriate act this Labor Day than for union members and friends of labor to write their Congressmen and Senators on behalf of the Daniels Bill. It is this kind of support that must be forthcoming if the Daniels Bill is to become the law of the land.

The workers of America have another concern this Labor Day. They see not only their jobs being threatened by foreign imports, they actually see their jobs being wiped out. The Shoe Workers Union, for example, estimates that 200 million pairs of shoes imported last year were equivalent to the exportation and the loss of 65,000 job opportunities. The Textile Workers have seen plant after plant close. And so it goes with one group of workers after another.

The labor movement, contrary to charges that it is becoming protectionist, believes in a healthy expansion of trade with other nations. But we insist that it should be fair trade; that there be international standards to eliminate sweatshop working conditions; that such expansion of trade should not under-cut unfairly the wages and standards of American workers.

As I stated at the beginning of these remarks, our economy must work for the benefit of all. If the worker is regarded as expendable in fighting inflation . . . if the worker is regarded as expendable in the prevention of accidents and death on the job . . . if the worker is treated as expendable in our Nation's trade with foreign countries . . . then the economy is not working for the benefit of all.

On Labor Day our Nation pays fitting tribute to workers for their role in our society as producers and builders, as suppliers of the muscle and manpower which fuel our country's industrial machine. But it is not fitting to pay tribute to the worker on his National holiday and then ignore him all the other days of the year. It is not fitting to pay him signal honor on Labor Day and then expect him to pay the price for halting inflation, to risk his life unnecessarily on the job and to watch silently while his job is wiped out by imports.

American labor, on its national holiday, has the right to insist that all share fairly in the benefits of our private enterprise system . . . the right to insist that human values and priorities not be drowned by the onrushing wave of technology . . . the right to insist that the private enterprise system in America does not exist for the primary purpose of making a profit for owners . . . to insist rather that the private enterprise system exists primarily to provide goods and services and a decent standard of living for people.

These are Labor's rightful demands on this Labor Day 1970. And this is what the United Steelworkers of America and the labor movement as a whole will continue to insist upon until they are realized.

Thank you.

CRIME

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Oklahoma (Mr. EDMONDSON) is recognized for 30 minutes.

Mr. EDMONDSON. Mr. Speaker, of all the problems that confront the American people today—and there are many of them—I do not believe any problem is

more urgent and more distressing than the problem of continued crime in this country and the continued upward spiral of the crime rates. Conversations with the constituents that I am honored to represent in northeastern Oklahoma convince me that the people are terribly impatient with the rate of action that has been taking place on this front, and their impatience is not confined to any particular part of the Government. The feeling of urgency, and the demand for action, is a strong feeling that prevails among the people.

The American people have good reason to be distressed about the situation. The latest crime reports issued by the Federal Bureau of Investigation indicate that the first 3 months of 1970 found increases across the board in practically every major category of crime throughout the United States.

Surprisingly, the major increases were not in the big cities where the publicity has been concentrated. The most substantial increases in total crime during that 3-month period in 1970 over the 3 months that began in 1969 occurred in cities from 100,000 to 250,000, where the total went up 22-percent over 1969. An 18-percent increase occurred, interestingly enough, in communities under 10,000 indicating that whether you live in a small town or in a large city, you are confronted with this very serious problem, and it gets worse day by day.

No section of the country is immune from it. The increase in violent crimes in the Northeastern States during that period was only 6 percent, but the increase in other crimes ranged from 10 percent, in the case of murder, to 8 percent in the case of aggravated assault, and 6 percent in auto theft.

In the North Central States also there was a significant increase in the crime rate. There was a 17-percent total increase in the North Central States. In the Southern States it was 17 percent, and in the Western States only slightly less, 15 percent. The big cities of the country turned up some statistics that were absolutely appalling in this connection.

New York City showed increases in all but two categories of major crime, and those increases were very, very substantial. Auto theft, while not one of the major increases, still went up very substantially. Larceny, burglary, breaking, and entering, and aggravated assault—you name it, and it went up in New York City.

The same can be said for cities from the South to the North and from the East to the West. Crimes went up in all but two categories in Atlanta, Ga. They went up in all categories in the city of Chicago, and in all categories in the city of Detroit, and in most categories in the city of Los Angeles, and in all but one category in the Nation's Capital, where only a short time ago we were being assured that the streets were going to be made safe for everyone.

The statistics for the District of Columbia will, I think, have particular interest for all of us here. They showed an increase in the category of burglary from 2,780 to 3,076 during the 3-month period. In the category of aggravated assault, the figure increased from 707 to 952 during the 3-month period. Burglary and breaking and entering went up from 4,872 cases to 6,175.

These increases were being registered all across the country. In Oklahoma City and in Tulsa there were substantial increases. They prevailed in practically all categories.

Mr. Speaker, at the conclusion of my remarks I will include the complete table of the increases in the different cities of the Nation in these various categories ranging from murder and manslaughter to auto theft, as reported in the uniform crime reports of the FBI.

There is a great deal of contention and discussion about who is responsible for this continued situation. Very obviously an effort is underway at this time to put the blame on the Congress of the United States. I am not here today to say that no blame should accrue to the Congress. I personally have been very unhappy about the slowness in several of the committees—and it is not confined to just one committee—to hold hearings and to move bills that vitally affect the crime these programs, and I know the distress which I express is shared by many.

But, Mr. Speaker, there is also some situation and the tools that are available to the various law enforcement agencies to deal with crime. We have had bills pending since early in 1969 on some of responsibility at the other end of Pennsylvania Avenue. The Congress passed not too very long ago one of the major pieces of legislation to deal with the problem of crime in this country, the Safe Streets Act. The Safe Streets Act has provided a steadily increasing amount of money to be made available to local police departments and sheriffs and highway patrols to carry the fight to the criminal and to organized crime. For fiscal year 1971, the Safe Streets Act carries an authorization of $650 million, but the men who are in charge of the fight against crime in the Federal executive department confined their request for money to implement this program to $480 million for fiscal year 1971—just a little more than two-thirds of what the authorizing legislation made available to them.

All of us know of the long delay in allocating Federal funds which were appropriated last year to law enforcement agencies across the country, a delay which carried on for months, a delay which made many of us, I believe, very dubious about the zeal present in the Department of Justice to carry out the Safe Streets Act and to make the tools of law enforcement available across the country through the funds provided by the Congress.

I believe the administration has failed very seriously in its responsibility vigorously to implement the Safe Streets Act, and many police departments and sheriffs' departments across the country today are not as well equipped and well trained as they should be because of this lag on the part of the administration.

Another area in which I feel there has been a serious lag by the administration is in using the tool made available by this Congress to deal with the problem of travel across State lines for the purpose of inciting riot and causing violent civil disturbances. I was one of the cosponsors of that bill when it passed the Congress. I still believe it is one of the finest tools possessed by the Government today to try to deal with this problem.

How many times has the administration made use of this bill since it was passed by the Congress of the United States? I personally know of only two cases, both of them in the city of Chicago, where prosecutions have been brought under this particular law. It is available to handle the problem in California, New York, Florida, Alabama—anywhere in the country—and certainly the files of the FBI must be bulging with the evidence of representatives of various subversive groups traveling across the country, from one college campus to another and from one city to another, to spread anarchy and the seeds of revolution and to try to produce rioting and violence on the college campuses and on the streets of America.

But in only two instances—the Chicago Seven case and now the Chicago 12—has prosecution been initiated. I believe there has been a serious failure on the part of the administration to use this major tool to try to deal with this serious problem.

I just had called to my attention another regrettable failure by this administration to recognize the seriousness of this problem in the country. The other day I received some correspondence from one of our U.S. District Judges, Judge Allen E. Barrow of the U.S. District Court for the northern district of Oklahoma, Tulsa, Okla., in which he made available to me an exchange of correspondence between himself and the Deputy Attorney General of the United States, Mr. Richard G. Kleindienst.

Mr. Kleindienst had written to the judges across the country asking for their advice as to what could be done to improve the security of the courts. I am sure he has been shocked, just as many of us have been, by the incidents of violence and disruption which have occurred in the courtrooms of the country. Everyone knows of what happened in the California court, in which a trial judge, an assistant district attorney and some of the jurors were kidnapped at the point of a gun and taken out of the courtroom by a group of convicts.

In my own home State just within the last few weeks a district judge of the State got out into his automobile in the morning and had it blow up under him, and he was critically hurt and has been in the hospital for quite some time since then.

The necessity for providing security in the courts is absolutely imperative, and yet when Judge Barrow joined other judges in advising that it was absolutely essential that additional U.S. marshals be provided in order to provide security in the Federal courts, he encountered the judgment of the assistant attorney general that existing manpower must be made to serve. Apparently, it was considered undesirable to secure additional manpower for this purpose.

Judge Barrow wrote me:

I know all of the judges would appreciate Congress taking immediate notice of the threats to our courts system and personnel and appropriating sufficient funds of money to establish some sort of security for the courts. Now it is "hit and miss"—not enough Marshals, Guards, trained personnel nor funds with which to hire them.

Mr. Speaker, I ask unanimous consent that the exchange of correspondence between Judge Barrow and Mr. Kleindienst and other officers of the court be made a part of the RECORD at the conclusion of my own remarks here today.

The SPEAKER pro tempore. Without objection, it is so ordered.

There was no objection.

Mr. McCORMACK. Mr. Speaker, will the gentleman yield to me?

Mr. EDMONDSON. I am glad to yield to my distinguished Speaker.

Mr. McCORMACK. In connection with the kidnaping and the murder of the judge in California, which was a brutal and inhuman act, that constituted an assault upon the judicial system of our country. It could have happened to any judge anywhere throughout the United States, whether in the Supreme Court, the circuit courts, the U.S. district courts, or any of the State courts or even down in the lowest courts in any section of the country or any State of the Union. The judges of our country have to realize the meaning and the significance of what this act implies in terms of the one department of the Government which is supposed to be the citadel of the liberties of our people. It deals with not only those charged with crime but the rights of the law-abiding citizens under the Constitution of the United States.

I am glad that the gentleman from Oklahoma read the letter that he received from the district court judge, Judge Barrow, because it clearly indicates to me that he has an appreciation of what these assaults constitute and, whereas this happened in the case of a few, it could just as well happen to any man who sits upon the bench.

I might also say that these attacks upon police officers work in the same way. Those men are targets. They wear the uniform. The courts have to realize that they have a responsibility in connection with seeing that the rights of law-abiding citizens are protected. Furthermore, public officials have the duty and responsibility of not following the path of appeasement but, rather, the path of firmness in protecting the rights of individuals charged with crime as provided for in the Constitution and also protecting the rights of the law-abiding citizens of this country who are in the great and overwhelming majority.

I am very proud of the instruction that I gave the Chief of the Capitol Police 4 years ago, which instruction is still in existence, when we had a threatened march on this chamber by a group which was not emotionally minded but was, rather, possessed of cold and deliberate minds. They threatened to march on the Capitol and take over this chamber. I gave instructions to the Chief of Police at the Capitol at that time that first, I would not stand for defiance of the law; second, I expected him to enforce the law; and third, and this is more important than the other two—I said "I will back you up."

If the public officials throughout our country will let the police know that they will be backed up, there will be less crime throughout the country.

Mr. EDMONDSON. I thank the Speaker very much for his very timely comments. I could not agree more with his statement that the police officers of America today are the targets and the special targets of some of the would be revolutionaries who are circulating across this country. In fact, any representative of order in our country is a target for this group.

Our firemen have been the targets of some of them as well as our policemen and our National Guard and even Federal troops.

One of the bills I regret very much we have not moved forward in this Congress is House Resolution 793, introduced on the third day of January 1969 with 24 sponsors joining me in introducing the bill to make it illegal to assault or kill a member of the Armed Forces while serving under the direction of the President, to try to establish the Federal jurisdiction over attacks upon our Armed Forces when they are ordered into handling riot situations or a crisis at the direction of the President. I think we owe this to the Armed Forces whether they wear a National Guard uniform or an Army uniform or an Air Force uniform or whatever it may be when they are sent in by the President to deal with an emergency or a riot or something of that nature. It should be a Federal offense to attack them and certainly it should be a Federal crime to kill them.

Mr. McCORMACK. And, if the gentleman will yield further, they are only sent in by the President when the Governor requests it.

Mr. EDMONDSON. That is right and that is the case in virtually every instance that I know of.

Mr. STRATTON. Mr. Speaker, will the gentleman yield?

Mr. EDMONDSON. I yield to the gentleman from New York.

Mr. STRATTON. Mr. Speaker, I want to commend the gentleman from Oklahoma for taking this time to point up this very important subject. I agree with the genleman that there is no area of legislation which is of more importance than these crime bills. I think that although we have passed the District of Columbia crime bill and the safe streets bill that nevertheless, as the gentleman pointed out, there are several other bills that are equally important. The bill on explosives, for example, that has been languishing in the committee, and others, I think that very properly this Congress ought to move swiftly in these closing days to get this legislation out and to get it enacted.

There has been a feeling in recent years, as the gentleman has alluded to that it is somehow wrong for us to oppose violence and it is somehow wrong for us to want to maintain law and order. Those terms are we are told symbolic of repression. We cannot have an orderly society without order. I think the events that are taking place in the Middle East in recent weeks have perhaps reminded some people that when you have wild men abroad and operating against us certainly only firm and quick action on our part can maintain the kind of procedures that we need in a democratic society.

Mr. Speaker, I want to again commend the gentleman and I want to support the gentleman. I think many of us in this body feel the same way the gentleman does. I think it is important that that fact should be made known.

I also want to agree with what the gentleman has said with respect to some failure to take full advantage of the legislation that is on the books. I think particularly of the legislation that we adopted here several years ago to withdraw from the students who are guilty of seriously disrupting the educational process, the taxpayers' funds that are made available to them.

Now the country is concerned about whether there is going to be a new wave of college unrest when the colleges open up again. We have indicated that we would hope that the administrators and the faculties would take advantage of their positions of responsibility and try and prevent this kind of thing from getting under way. But I think the law that is already on the books has been enforced only rarely. I believe you could count on the fingers of a couple of hands the number of people who have actually had their loans or their scholarships taken away because they burned down the old chapel, or what have you. It seems to me that those who are responsible for enforcing the law ought to make sure that the legislation we have on the books is enforced, and that it is the intent of Congress that this be made clear.

Mr. EDMONDSON. The gentleman makes a good point. I agree with him wholeheartedly. On the subject of the campus situation, House Resolution 10544 with approximately 50 cosponsors was introduced on the 24th of April, 1969, to try to meet effectively the problem of campus disruptions and the problem of people who brought explosives or guns on college campuses, for such purposes.

Mr. STRATTON. Exactly.

Mr. EDMONDSON. To my knowledge, that bill is still waiting for hearings and action on it.

We have some bills dealing with our narcotics problem which is getting more and more serious every day. I am glad that we are finally going to get a chance within the next week to vote on measures to tighten up the penalties in connection with narcotics abuse and particularly the professional pusher. This bill is long overdue.

It is very good news for the Congress that we will soon have it on the floor of the House.

Mr. STRATTON. If the gentleman will yield further, I just want to support his statement. This is the kind of thing I have heard about in going around my district in upstate New York. I think people are concerned about crime and disruption in the colleges and they are looking to the Congress for leadership.

Mr. EDMONDSON. In summary, I think it is imperative that this Congress meet its responsibilities in the field of updating and strengthening our laws to deal with crime. I think we have some bills pending before us now that must be acted upon before this Congress adjourns sine die, and it is imperative from the standpoint of the public that they be acted upon, I am quite certain as quickly as possible.

In addition to that, however, the administration must also measure up to its responsibility. There is enough blame in this situation to pass around all over the country. If we are going to spend all our time concentrating on who is at fault, we probably will not get the job done.

I hope the President will seek the funds that are needed to carry out effectively the Safe Streets Act, and that he will seek the funds which I am sure the Congress will provide to give us security in the courts, and that he will use this bill that makes it a crime to cross State lines to incite riots and civil disturbances more effectively and more generally than he has been using it in the past.

Mr. RUTH. Mr. Speaker, will the gentleman yield?

Mr. EDMONDSON. I yield to the gentleman.

Mr. RUTH. The gentleman now in the well has been talking about crime control, and I do not think there could be a more appropriate subject. I commend the gentleman for pointing out those things that could be done in the country. I heartily agree that any legislation we can pass is necessary and could be most helpful.

But I notice that the gentleman mentioned that most of the blame in the direction of the administration. Did the gentleman mention any blame in connection with the judiciary? Would the gentleman comment on that?

Mr. EDMONDSON. I think my remarks were concentrated upon the Congress and upon the Executive. I share the feeling, which I think is held by the gentleman, that we have far too many judges who have leaned over backwards in the attempt to appear liberal and lenient and who have not been tough in dealing with criminals and people who are proven to be criminals in cases brought before them where there have been jury verdicts of guilty. I think the judges are finally waking up across the country to the fact that this policy of leniency is undermining the faith of many people in our courts and in the administration of justice.

Yes, there is a responsibility in the judiciary and it extends to many of our trial courts just as it does to the Highest Court in the land in the handling of some cases on appeal. But I think our courts are at least waking up to the national need for swifter, more effective justice. The people are entitled to have a full scale attack on this problem in all three branches of the Federal Government—at the highest level and at the local level.

Mr. RUTH. I thank the gentleman because I think this makes a much more complete statement.

Mr. EDMONDSON. I thank the gentleman for his comments.

The material referred to previously in my remarks is as follows:

UNITED STATES DISTRICT COURT,
NORTHERN DISTRICT OF OKLAHOMA,
UNITED STATES COURTHOUSE,
Tulsa, Okla., September 9, 1970.

The Honorable ED EDMONDSON,
United States Congressman, Second Congressional District, 2402 Rayburn Building, Washington, D.C.

DEAR CONGRESSMAN EDMONDSON: Enclosed herewith are copies of letters in answer to correspondence from the Deputy Attorney General and the Director of the Administrative Office of the United States Courts.

I know all of the Judges would appreciate Congress taking immediate notice of the threats to our Courts' system and personnel and appropriating sufficient funds of money to establish some sort of security for the Courts. Now it is "hit and miss"—not enough Marshals, Guards, trained personnel nor funds with which to hire them.

Sincerely,

ALLEN E. BARROW,
U.S. District Judge.

UNITED STATES DISTRICT COURT,
NORTHERN DISTRICT OF OKLAHOMA,
UNITED STATES COURTHOUSE,
Tulsa, Okla., September 9, 1970.

Mr. RICHARD G. KLEINDIENST,
Deputy Attorney General,
Washington, D.C.

DEAR MR. KLEINDIENST: Today I received a copy of your letter addressed to the Director of the Administrative Office of the United States Courts which is dated August 27, 1970.

I appreciate your concern for the safety of the Courts, and I would value even more some action and aid to assist Courts in getting adequate personnel to set up a meaningful security program.

You, no doubt, know that in my district we have had some serious situations occur in the last few days. There has been a bombing of a state District Judge who is still in a very critical condition; and, also, there have been numerous threats on judges in courts in this area following this incident.

Someone must do something immediately, in my opinion, to get funds from Congress for the necessary personnel to assure proper security of the courts. I assume this would come under the Department of Justice.

Thanks again for your letter and concern. Any additional information you have toward setting up a security program for the courts will be appreciated.

Sincerely,

ALLEN E. BARROW.

UNITED STATES DISTRICT COURT,
NORTHERN DISTRICT OF OKLAHOMA,
UNITED STATES COURTHOUSE,
Tulsa, Okla., September 9, 1970.

Mr. ROWLAND F. KIRKS,
Director, Administrative Office of the United States Courts, Washington, D.C.

DEAR MR. KIRKS: Today I received your cover letter dated September 3, 1970, enclosing a copy of a letter from the Deputy Attorney General relating to his concern over the safety of the courts.

Enclosed is a copy of my response to the Deputy Attorney General. I will state that the best way to handle this problem is for the Administrative Office to make the Conference aware of the necessity for trained personnel in security. I have no doubt that if such a request were made, that Congress would appropriate funds to set up the necessary security for the courts.

The situation no doubt will get worse before it gets better. It seems we must prepare for this possibility.

Sincerely,

ALLEN E. BARROW.

ADMINISTRATIVE OFFICE OF THE
UNITED STATES COURTS,
SUPREME COURT BUILDING,
Washington, D.C., September 3, 1970.

To: The Chief Judges of the Courts of Appeals.

To: The Chief Judges of the District Courts.

I am transmitting to each of you a copy of a letter I have received from the Deputy Attorney General which expresses the grave concern which all of us feel for the safety of the court room under present circumstances and urges a reappraisal of the use of the deputy marshals.

I urge your earnest consideration of Mr. Kleindienst's suggestion and wish to assure you that the Administrative Office is ready to assist in these matters in any way in which we can be of help.

Sincerely,

ROWLAND F. KIRKS, *Director.*

OFFICE OF THE DEPUTY ATTORNEY
GENERAL,
Washington, D.C., August 27, 1970.

Mr. ROWLAND F. KIRKS,
Director, Administrative Office of United States Courts, Washington, D.C.

DEAR MR. KIRKS: Traditionally, our courts and the proceedings conducted under their auspices, have been characterized by dignity, decorum, and inviolability. Witnesses, jurors, attorneys, spectators and jurists alike have viewed the courtroom as a sanctum in which they were secure from the intrusion of violence and disorder.

In recent years there has seemingly been an unfortunate degeneration of those treasured traditions and with increasing frequency the sanctity of judicial processes are demeaned by the introduction of immoderate behavior and the offer of violence in the presence of the court. An ultimate outrage occurred recently when Superior Judge Harold J. Haley of San Rafael, California was kidnaped from the bench and murdered.

Understandably, members of our Federal bench have expressed grave concern over the safety of persons in their courtrooms and apprehension lest the objectivity of their proceedings be diluted by intimidation. It has been suggested that a larger number of United States Marshals Service personnel be provided in order to enhance security in the courts. Unfortunately, this is not a currently feasible solution since our limited Service personnel resources are already over-committed.

In an effort to identify an alternate solution, I am taking the liberty of suggesting that reappraisal of marshal utilization may be beneficial to many judicial districts. Specifically, I am addressing this suggestion to those courts in which the deputy marshal is required to be in attendance, even though there are no prisoners present, and the deputy performs duties ordinarily assigned a bailiff or crier. The application of Service resources to other than those tasks which require their specific talents and authority, diminishes Service capacity for providing essential security.

The marshal in each district has been instructed to assist the chief judge at his convenience, in identifying functional areas in which deputy participation can be reduced or eliminated in order to permit increased attention to court security in criminal proceedings.

I would appreciate your conveying my thoughts to the chief judges of the judicial districts.

Sincerely,

RICHARD G. KLEINDIENST,
Deputy Attorney General.

UNIFORM CRIME REPORTING—(JANUARY–MARCH 1970)

Crime in the United States, as measured by the Crime Index, increased 13 percent during the first three months of 1970 when

compared with the same period in 1969. The violent crimes as a group were up 12 percent. Robbery increased 15 percent, murder 13 percent, aggravated assault 8 percent, and forcible rape was up 6 percent. The voluminous property crimes rose 13 percent as a group. Larceny $50 and over in value was up 17 percent, burglary 12 percent, and auto theft 11 percent. Cities having 250,000 or more inhabitants experienced an average increase of 8 percent, suburban law enforcement agencies reported an 18 percent rise, and the rural areas were up 19 percent (Table 1). Geographically, the North Central and the Southern States reported increases of 17 percent in the Crime Index offenses. The Western States were up 15 percent and the Northeastern States had a 4 percent rise (Table 2). Armed robbery which makes up about two-thirds of all robbery offenses increased 17 percent during the three-month period, aggravated assaults committed with a firearm were up 12 percent, and street theft increased 14 percent.

TABLE 1.—CRIME INDEX TRENDS (JANUARY–MARCH, PERCENT CHANGE 1970 OVER 1969, OFFENSES KNOWN TO THE POLICE)

Population group and area	Number of agencies	Population in thousands	Total	Violent	Property	Murder	Forcible rape	Robbery	Aggravated assault	Burglary	Larceny $50 and over	Auto theft
Total, all agencies	5,511	162,136	+13	+12	+13	+13	+6	+15	+8	+12	+17	+11
Cities over 25,000	827	90,190	+12	+12	+12	+15	+10	+14	+8	+11	+13	+11
Suburban area	2,014	47,352	+18	+13	+18	+28	−8	+24	+9	+14	+26	+12

[1] 1969 figures not comparable with 1970, and are not used in trend tabulations. Agency reports which are determined to be influenced by a change in reporting practices, for all or specific offenses are removed from trend tables. All 1970 crime figures from reporting units are preliminary. Final figures and crime rates per unit of population are not available until the annual publication. Trends in this report are based on the volume of crimes reported by comparable units.

[2] Crime counts influenced in part by annexation 1970.

STANDARDS FOR FLAMMABLE FABRICS

The SPEAKER pro tempore (Mr. McFALL). Under previous order of the House, the gentleman from Georgia (Mr. DAVIS) is recognized for 10 minutes.

Mr. DAVIS of Georgia. Mr. Speaker, my responsibilities on the Committee on Science and Astronautics have provided me with a vantage point from which to view many of the scientific activities of our Government.

As chairman of the Subcommittee on the National Bureau of Standards, I have had an unusual opportunity to familiarize myself with much of the fine work done by that organization particularly in the area of standards and tests.

It is with this background that I view with deep apprehension a tendency in some agencies of Government to set themselves up as scientific arbiters of standards and test methods without reference to the superior experience and talents available to the Government through the National Bureau of Standards.

Mr. Speaker, the American taxpayer supports the National Bureau of Standards with appropriations designed to gather to that organization the best scientists available for the broad area of work in which it engages. In fiscal 1970 the American taxpayer invested $39,687,000 in the activities of the Bureau.

Certainly no one will contend that elsewhere in our Government are there scientists more competent in standards and test methods on materials with which the National Bureau of Standards concerns itself.

It is for this reason, as my colleagues well know, that responsibility for developing test methods and standards for flammable fabrics was placed in the Department of Commerce, of which the National Bureau of Standards is an operating arm.

Pursuant to its responsibility under the act, the Bureau of Standards developed a test method and flammability standard for carpet and I am advised, by the way, that the carpet and rug industry voluntarily commenced a program with the National Bureau of Standards to develop a Federal flammability standard even before the Department of Commerce announced its findings of a need for such a standard.

Only recently, Mr. Speaker, officials of the Department of Commerce acknowledged that carpet was not high on the priority list of fabrics requiring attention because of their inherent flammability. The fact is that until an unfortunate nursing home fire in Marietta, Ohio, last January, carpet was almost singularly free of responsibility for fire injuries or deaths.

Calvin H. Yill, manager of the first research section of the Southwest Research Institute, San Antonio, Tex., one of the Nation's foremost authorities on fire technology, stated in an article in the journal Fire and Flammability, as recently as last January that—

> Less than a dozen incidents have been reported where floor coverings have been a factor in early spread of fire.

More recently, recognized authorities have pointed out that the absence of sprinkler and early fire warning systems in the Marietta, Ohio, fire were the real cause of the tragedy there and that the finger of responsibility was pointed at carpet only because basic fire safety precautions were absent.

I refer to this simply so that my colleagues may better understand my concern regarding recent actions by the Department of Health, Education, and Welfare.

In 1968, the Public Health Service, in apparent realization that its position in requiring such a test for carpet was untenable, asked for bids on a new test method. It stated then that—

> The investigation should specifically require that the material to be tested shall be located in a normal on-the-floor position.

In commenting on the Public Health Service invitation to bid, G. T. Castino, engineering group leader, fire protection department, Underwriters' Laboratories, stated:

> The Public Health Service requested the project because the Steiner tunnel test used for the measurement of flame spread and smoke generation in building materials is unrealistic for testing carpeting.

Notwithstanding the clear nonapplicability of the Steiner tunnel test to carpet, Mr. Speaker, the Department of Health, Education, and Welfare on September 2 issued a new proposed regulation for nursing homes and hospitals. Again it included the discredited Steiner tunnel test. This time, however, it also provided for an alternative type of tunnel test which has been referred to as a "chamber" test. This is the test being developed under a $10,000 Public Health Service contract. It has not had the benefit of interlaboratory testing. It does not have the benefit of accreditation by the American Society for Testing and Materitals, always considered a prerequisite for an accepted test method. It does not test smoke or poisonous gases which are products of combustion, and which constitute the real culprit in most fires.

But more important, Mr. Speaker, despite the large funds expended to maintain scientific excellence in this field at the National Bureau of Standards, the Bureau, I am advised was not even accorded the respect of being consulted as to the validity of the new test.

It is beyond my comprehension why a department of Government with all of the resources of the excellent staff of the National Bureau of Standards available to it, would issue a proposed regulation in the area of standards and tests without enlisting the counsel of the Bureau.

I cannot understand why a department would issue a proposed regulation combining a discredited test and one which has not been accredited at all.

There are, Mr. Speaker, established procedures for accrediting test methods. In this case that procedure requires interlaboratory testing and approval by the American Society for Testing and Materials.

The Secretary of Health, Education, and Welfare will have another opportunity to review this proposed regulation before it is formally adopted. I trust, Mr. Speaker, that better judgment will prevail at that time.

Meanwhile, I will direct my attention to developing proposals which will require that agencies of Government consult the National Bureau of Standards in the future on all areas of its specialized competence so that miscarriages of justice such as that in the proposed HEW regulation will not occur again.

Another possibility, which I am exploring, Mr. Speaker, is to inquire into unnecessary overlapping of personnel in the field of testing and standards.

Certainly, we must not back away from adequate public protection, Mr. Speaker. Also, however, we should not waste Government funds by failing to use competent scientific personnel at our disposal. And we must not, in the name of public protection, do unnecessary injustice to an industry which contributes substantially to our economy, particularly when proposed regulations may not offer the protection which the public has a right to assume they afford.

SAFE AND HEALTHFUL EMPLOYMENT FOR AMERICAN WORKERS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Wisconsin, Mr. STEIGER is recognized for 30 minutes.

Mr. STEIGER of Wisconsin. Mr. Speaker, on June 16, the House Labor and Education Committee voted to report H.R. 16785, a bill to assure safe and healthful employment for American workers.

While the committee bill is not without its good points it has serious deficiencies and, unfortunately, these defects are of such nature that they jeopardize the very foundation of our comprehensive national effort to reduce job hazards. The bill fails to provide a fair and balanced administrative structure for properly mobilizing a national program and eliciting the best efforts of both employers and employees toward making working conditions safe and healthful.

Today I am joining with the distinguished gentleman from Florida (Mr. SIKES) in introducing a bill which incorporates the better features of the reported bill but includes new provisions designed to correct the serious deficiencies of the committee bill.

Mr. Speaker, I realize it is late in the session, but if we sincerely desire to see the enactment of any effective occupational safety and health legislation, I earnestly urge favorable consideration of the bill we are introducing. This bill has been carefully drafted and reflects what reasonable men can produce when they cast aside partisan politics and agree to overcome their differences in the interest of worthwhile legislation acceptable to a majority of other reasonable men and not merely to a "majority" in any narrow political sense.

The most serious criticism of H.R. 16785 is that it would vest all the functions under that bill in the Secretary of Labor.

The bill we offer overcomes this criticism by breaking up this monopoly of functions and distributing them in order to achieve the necessary balance to which I just referred. The new bill would establish a separate and independent Occupational Safety and Health Board whose five members would be appointed by the President. The sole function of this Board would be to set standards; it would not adjudicate cases of alleged violation. This Board could use advisory committees in the standard-setting procedures as the Secretary could do under the committee bill. But the committee bill makes the use of these advisory committees mandatory. I believe that requiring their use can be time consuming particularly when coupled with mandatory time periods within which these committees are permitted to develop their recommendations. Therefore, in this bill, the Board's use of these committees is discretionary; they would be enlisted only where they can make a real contribution. The members of the Board would serve at the President's pleasure.

Another fault of the committee is its lack of flexibility in regard to developing any standards that are needed right away. The committee bill requires a hearing before any standards can be promulgated regardless of how urgently needed those standards may be. The measure I offer provides that where there is grave danger to workers resulting from toxic substances and new processes, the Board can promulgate emergency temporray standards immediately without regard to procedures under the Administrative Procedure Act. However, as soon as these temporary emergency standards are adopted, the bill I am introducing requires the Board to commence APA hearings to replace them with permanent standards.

Also, this bill provides for those particular needs we shall face in the early and crucial days of the new law. We are going to need, right away, a foundation upon which to build. The new bill improves on H.R. 16785 by providing that national consensus standards and already existing Federal standards can be adopted by the Board immediatly without invoking APA procedures. Again, of course, the bill provides that such standards will be replaced by permanent ones set through the use of formal APA hearings.

These twin provisions—the early and quick adoption of emergency temporary standards and of existing standards—are substantial improvements over the commitee-reported bill.

Under the committee bill the Secretary of Labor, in addition to setting standards, would enforce those standards; and he, again, would be the one to issure corrective orders along with assessing penalties. Therefore, to avoid turning the Secretary into prosecutor, judge, and jury, the bill we are introducing would set up a separate independent Occupational Safety and Health Appeals Commission for the purpose of adjudicating cases of alleged violations brought before it by the Secretary of Labor.

Our bill would also overcome another serious criticism of the committee bill; namely, that its general safety requirement is too broad and vague in its mandate that employers maintain safe and healthful working conditions. It does so by simply making that requirement more specific by requiring employers to maintain working conditions which are free "from any hazards which are readily apparent and are causing or likely to cause death or serious physical harm." It is grossly unfair to require employers to supply every conceivable safety and health need for which no specific standards exist to guide them. So by limiting this "general duty" requirement to apparent dangers, the new bill overcomes this element of unfairness but at the same time provides protection in serious situations which may not be covered by a precise standard.

The concept of issuing citations is a sound proposal, but the committee bill goes about it in too complicated a way. It is difficult to understand why the reported bill ties citations to "serious danger" in some cases and not in others. The new bill simplifies all this by requiring the Secretary to issue a citation in every instance where the act is violated, unless, of course, it is de minimis.

The bill also overcomes the controversy over applying penalties to only willful violations. The new bill provides civil penalties of up to $10,000 for each willful or repeated violation of the act; and where willfulness is not an element, a civil penalty of up to $1,000 for any violation.

The last controversial point which the bill would eliminate is the one involving an inspector's right to close down a plant operation "on the spot" where an imminent danger exists. The bill would leave this up to the district courts. In any event, it is always the possibility of ultimate resort to the courts which brings about compliance with any stopwork order, so by expressly providing that the courts do this in the first place is a reasonable provision.

Mr. Speaker, these are some of the highlights of this bill we are introducing today. This bill was drafted in the spirit of overcoming differences which divide us. Much of the bill we are introducing is similar to the committee bill. But the new provisions I have just outlined are vital to this legislation. We cannot expect to have genuinely effective legislation if we do not provide a balanced structure for carrying out its provisions.

This new bill is almost identical to a substitute offered in the Committee on Education and Labor by the distinguished gentleman from Maine (Mr. HATHAWAY) and myself. It was turned down by a vote of 15 to 19. This substitute will be offered on the floor because I believe the deficiencies in H.R. 16785 are so great that a new approach is needed. The Hathaway-Steiger substitute when it was offered in the committee was a compromise designed to attract bipartisan support so that a bill which was effective could be passed by the House.

I am pleased that the able gentleman from Florida (Mr. SIKES) has agreed to join in sponsoring this legislation. When H.R. 16785 comes to the floor Mr. Sikes and I will offer this bill in a bipartisan effort to pass an effective, fair, and enforceable health and safety bill in this session of the Congress.

At this point, Mr. Speaker, I want to include a copy of the substitute, a section-by-section analysis, a comparison of H.R. 16785 with the substitute, and the minority views as contained in the report accompanying H.R. 16785—Report No. 91–1291—which detail the serious weaknesses of the committee bill and the reasons why the House should adopt H.R. 19200, the substitute bill being introduced today. The material referred to follows:

H.R. 19200

A bill to assure safe and healthful working conditions for working men and women; by providing the means and procedures for establishing and enforcing mandatory safety and health standards; by assisting and encouraging the States in their efforts to assure safe and healthful working conditions; by providing for research, information, education, and training in the field of occupational safety and health; and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Occupational Safety and Health Act."

CONGRESSIONAL FINDINGS AND PURPOSE

SEC. 2. (a) The Congress finds that personal injuries and illnesses arising out of work situations impose a substantial burden upon, and are a hindrance to, interstate commerce in terms of lost production, wage loss, medical expenses and disability compensation payments.

(b) The Congress declares it to be its purpose and policy, through the exercise of its powers to regulate commerce among the several States and with foreign nations and to provide for the general welfare, to assure so far as possible every working man and woman in the Nation safe and healthful working conditions and to preserve our human resources—

(1) by encouraging employers and employees in their efforts to reduce the number of occupational safety and health hazards at their places of employment, and to stimulate employers and employees to institute new and to perfect existing programs for providing safe and healthful working conditions.

(2) by providing that employers and employees have separate but dependent responsibilities and rights with respect to achieving safe and healthful working conditions;

(3) by creating a National Occupational Safety and Health Board to be appointed by the President for the purpose of setting mandatory occupational safety and health standards applicable to businesses affecting interstate commerce, and by creating an occupational Safety and Health Appeals Commission for carrying out adjudicatory functions under the Act;

(4) by building upon advances already made through employer and employee initiative for providing safe and healthful working conditions;

(5) by providing for research in the field of occupational safety and health, including the psychological factors involved, and by developing innovative methods, techniques and approaches for dealing with occupational safety and health problems;

(6) by exploring ways to discover latent diseases, establishing causal connections between diseases and work in environmental conditions, and conducting other research re-

lating to health problems, in recognition of the fact that occupational health standards present problems often different from those involved in occupational safety;

(7) by providing medical criteria which will assure insofar as practicable that no employee will suffer diminished health, functional capacity, or life expectancy as a result of his work experience;

(8) by providing for training programs to increase the number and competence of personnel engaged in the field of occupational safety and health;

(9) by providing for the development and promulgation of occupational safety and health standards;

(10) by providing an effective enforcement program which shall include a prohibition against giving advance notice of any inspection and sanctions for any individual violating this prohibition;

(11) by encouraging the States to assume the fullest responsibility for the administration and enforcement of their occupational safety and health laws by providing grants to the States to assist in identifying their needs and responsibilities in the area of occupational safety and health, to develop plans in accordance with the provisions of this Act, to improve the administration and enforcement of State occupational safety and health laws, and to conduct experimental and demonstration projects in connection therewith;

(12) by providing for appropriate reporting procedures with respect to occupational safety and health which procedures will help achieve the objectives of this Act and accurately describe the nature of the occupational safety and health problem;

(13) by enouraging joint labor-management efforts to reduce injuries and disease arising out of employment.

DEFINITIONS

SEC. 3. For the purposes of this Act—

(1) The term "Secretary" means the Secretary of Labor.

(2) The term "Safety and Health Appeals Commission" means the Occupational Safety and Health Appeals Commission established under section 12 of this Act.

(3) The term "Board" means the National Occupational Safety and Health Board established under section 8 of this Act.

(4) The term "commerce" means trade, traffic, commerce, transportation, or communication among the several States, or between a State and any place outside thereof, or within the District of Columbia, or a possession of the United States (other than a State as defined in paragraph (8) of this subsection), or between points in the same State but through a point outside thereof.

(5) The term "person" means one or more individuals, partnerships, associations, corporations, business trusts, legal representatives, or any organized group of persons.

(6) The term "employer" means a person engaged in a business affecting commerce who has employees, but does not include the United States or any State or political subdivision of a State.

(7) The term "employee" means an employee of an employer who is employed in a business of his employer which affects commerce.

(8) The term "State" includes a State of the United States, the District of Columbia, Puerto Rico, the Virgin Islands, American Samoa, Guam, and the Trust Territory of the Pacific Islands.

(9) The term "occupational safety and health standard" means a standard which requires conditions, or the adoption or use of one or more practices, means, methods, operations, or processes, reasonably necessary or appropriate to provide safe or healthful employment and places of employment.

(10) The term "national consensus standard" means any occupational safety and health standard or modification thereof which (a) has been adopted and promulgated by a nationally recognized public or private standards-producing organization possessing technical competence and under a consensus method which involves consideration of the views of the interested and affected parties and (b) has been designated by the Board, after consultation with other appropriate Federal agencies.

(11) The term "established Federal standard" means any operative occupational safety and health standard established by any agency of the United States presently in effect, or contained in any Act of Congress in force on the date of enactment of this Act.

APPLICABILITY OF ACT

SEC. 4. This Act shall apply only with respect to employment performed in a workplace in a State, Wake Island, Outer Continental Shelf lands defined in the Outer Continental Shelf Lands Act, Johnston Island, or the Canal Zone, except that this Act shall not apply to any vessel under way on the Outer Continental Shelf lands. The Secretary of the Interior shall, by regulation, provide for judicial enforcement of this Act by the courts established for areas in which there are no Federal district courts having jurisdiction.

DUTIES OF EMPLOYERS

SEC. 5. Each employer—

(a) shall furnish each of his employees employment and a place of employment which are free from any hazards which are readily apparent and are causing or are likely to cause death or serious physical harm to his employees;

(b) shall comply with occupational safety and health standards promulgated under this Act.

OCCUPATIONAL SAFETY AND HEALTH STANDARDS

SEC. 6(a). The National Occupational Safety and Health Board established under section 8 of this Act is authorized to promulgate rules prescribing occupational safety and health standards in accordance with sections 556 and 557 of title 5, United States Code.

(b) Without regard to the provisions of sections 553, 556, and 557, title 5, United States Code, the Board shall, as soon as practicable, but in no event later than three years after the date of enactment of this Act, by rule promulgate as an occupational safety and health standard, any national consensus standard or any established Federal standard, unless it determines that the promulgation of such a standard as an occupational safety and health standard would not result in improved safety or health for affected employees. In the event of conflict among such standards, the Board shall promulgate the standard which assures the greatest protection of the safety or health of the affected employees. Such national consensus standard or established Federal standard shall take effect immediately upon publication and remain in effect until superseded by a rule promulgated pursuant to subsection (a) of this section.

(c)(1) Whenever the Board promulgates any standard, makes any rule, order, decision, grants any exemption or extension of time, it shall include a statement of the reasons for such action, and such statement shall be published in the Federal Register; and

(2) Whenever a rule issued by the Board differs substantially from an existing national consensus standard, the Board shall include in the rule issued a statement of the reasons why the rule as adopted will better effectuate the purposes of this Act than the national consensus standard.

(d) Any agency may participate in the rulemaking under this section.

(e) The Secretary of Labor (with respect to safety issues) or the Secretary of Health, Education, and Welfare (with respect to health issues) may submit a request to the Board at any time to establish or modify occupational safety and health standards indicated in the request. Within 60 days from the receipt of the request, the Board shall commence proceedings under this section.

(f) Any interested person may also submit a request in writing to the Board at any time to establish or modify occupational safety and health standards. The Board shall give due consideration to such request and may commence proceedings under this section on the basis of such request.

(g) If, prior to the publication of the rule, an interested person or agency which submitted written data, views, or arguments makes application to the Board for leave to adduce additional data, views, or arguments and such person or agency shows to the satisfaction of the Board that additions may materially affect the result of the rulemaking procedure and that there were reasonable grounds for failure to adduce such additions earlier, the Board may receive and consider such additions.

(h) In determining the priority for establishing standards under this section, the Board shall give due regard to the need for mandatory safety and health standards for particular industries, trades, crafts, occupations, businesses, workpieces or work environments. The Board shall also give due regard to the recommendations of the Secretary and the Secretary of Health, Education, and Welfare regarding the need for mandatory standards in determining the priority for establishing such standards.

(i)(1) The Board shall provide without regard to requirements of Ch. 5, title 5, United States Code, for an emergency temporary standard to take immediate effect upon publication in the Federal Register if it determines (A) that employees are exposed to grave danger from exposure to substances determined to be toxic or from new hazards resulting from the introduction of new processes, and (B) that such emergency standard is necessary to protect employees from such danger.

(2) Such standard shall be effective until superseded by a standard promulgated in accordance with the procedures prescribed in paragraph (3) of this subsection.

(3) Upon publication of such standard in the Federal Register the Board shall commence a hearing in accordance with sections 556 and 557 of title 5, United States Code, and the standard as published shall also serve as a proposed rule for the hearing. The Board shall promulgate a standard under this paragraph no later than six months after publication of the emergency temporary standard as provided in paragraph (2) of this subsection.

(j)(1) Whenever the Board upon the basis of information submitted to it in writing by an interested person (including a representative of an organization of employers or employees, or a nationally recognized standards-producing organization) or by the Secretary or the Secretary of Health, Education, and Welfare, a State or a political subdivision of a State, or on the basis of information otherwise available to it, determines that a rule should be prescribed under subsection (a) of this section, the Board may appoint an advisory committee as provided for in section 7(e) of this Act, which shall submit recommendations to the Board regarding the rule to be prescribed which will carry out the purposes of this Act, which recommendations shall be published by the Board in the Federal Register, either as part of a subsequent notice of proposed rulemaking or separately. The recommendations of an advisory committee shall be submitted to the Board within two hundred and seventy days from its appointment, or within such longer or shorter period as may be prescribed by the Board, but in no event may the Board pre-

scribe a period which is longer than one year and three months.

(2) After the submission of such recommendations, the Board shall, as soon as practicable and in any event within four months, schedule and give notice of a hearing on the recommendations of the advisory committee and any other relevant subjects and issues. In the event that the advisory committee fails to submit recommendations within two hundred and seventy days from its appointment (or such longer or shorter period as the Board has prescribed) the Board shall make a proposal relevant to the purpose for which the advisory committee was appointed, and shall within four months schedule and give notice of hearing thereon. In either case, notice of the time, place, subjects, and issues of any such hearing shall be published in the Federal Register thirty days prior to the hearing and shall contain the recommendations of the advisory committee or the proposal made in absence of such recommendation. Prior to the hearing interested persons shall be afforded an opportunity to submit comments upon any recommendations of the advisory committee or other proposal. Only persons who have submitted such comments shall have a right at such hearing to submit oral arguments, but nothing herein shall be deemed to prevent any person from submitting written evidence, data, views, or arguments.

(k) The Board shall within sixty days (where an advisory committee is utilized) or 120 days (where no advisory committee is utilized) after completion of the hearing held pursuant to section 6(a) issue a rule promulgating, modifying, or revoking an occupational safety and health standard or make a determination that a rule should not be issued. Such a rule may contain a provision delaying its effective date for such period (not in excess of ninety days) as the Board determines may be appropriate to insure that affected employers are given an opportunity to familiarize themselves and their employees with the requirements of the standard.

(1) Any affected employer may apply to the Board for a rule or order for an exemption from the requirements of section 5(b) of this Act. Affected employees shall be given notice by the employer of each such application and an opportunity to participate in a hearing. The Board shall issue such rule or order if it determines on the record, after an opportunity for an inspection and a hearing, that the proponent of the exemption has demonstrated by a preponderance of the evidence that the conditions, practices, means, methods, operations, or processes used or proposed to be used by an employer will provide employment and places of employment to his employees which are as safe and healthful as those which would prevail if he complied with the standard. The rule or order so issued shall prescribe the conditions the employer must maintain, and the practices, means, methods, operations, and processes which he must adopt and utilize to the extent they differ from the standard in question. Such a rule or order may be modified or revoked upon application by an employer, employees, or by the Board on its own motion in the manner prescribed for its issuance at any time after six months after its issuance.

(m) Standards promulgated under this section shall prescribe the posting of such labels or warnings as are necessary to apprise employees of the nature and extent of hazards and of the suggested methods of avoiding or ameliorating them.

ADVISORY COMMITTEES

SEC. 7. (a) There is hereby established a National Advisory Committee on Occupational Safety and Health (hereafter in this section referred to as the "Committee") consisting of twelve members appointed by the Secretary, four of whom are to be designated by the Secretary of Health, Education, and Welfare, without regard to the civil service laws and composed equally of representatives of management, labor and the public. The Secretary shall designate one of the public members as Chairman. The members shall be selected upon the basis of their experience and competence in the field of occupational safety and health.

(b) The Committee shall advise, consult with, and make recommendations to the Secretary and the Secretary of Health, Education, and Welfare on matters relating to the administration of the Act. The Committee shall hold no fewer than two meetings during each calendar year. All meetings of the Committee shall be open to the public and a transcript shall be kept and made available for public inspection.

(c) The members of the Committee shall be compensated in accordance with the provisions of subsection 8(g) of this Act.

(d) The Secretary shall furnish to the Committee an executive secretary and such secretarial, clerical, and other services as are deemed necessary to the conduct of its business.

(e) An advisory committee which may be utilized by the Board in its standard-setting functions under section 6 of this Act shall consist of not more than fifteen members and shall include as a member one or more designees of the Secretary of Health, Education, and Welfare, and also as a member one or more designees of the Secretary of Labor and shall include among its members an equal number of persons qualified by experience and affiliation to present the viewpoint of the employers involved, and of persons similarly qualified to present the viewpoint of the workers involved, as well as one or more representatives of health and safety agencies of the States. An advisory committee may also include such other persons as the Board may appoint who are qualified by knowledge and experience to make a useful contribution to the work of such committee, including one or more representatives of professional organizations of technicians or professionals specializing in occupational safety or health, and one or more representatives of nationally recognized standards-producing organizations, but the number of persons so appointed to any advisory committee shall not exceed the number appointed to such committee as representatives of Federal and State agencies. Persons appointed to advisory committees from private life shall be compensated in the same manner as consultants or experts under section 8(g) of this Act. The Board shall pay to any State which is the employer of a member of such committee who is a representative of the health or safety agency of that State, reimbursement sufficient to cover the actual cost to the State resulting from such representative's membership on such committee. Any meeting of such committee shall be open to the public and an accurate record shall be kept and made available to the public. No member of such committee (other than representatives of employers and employees) shall have an economic interest in any proposed rule.

NATIONAL OCCUPATIONAL SAFETY AND HEALTH BOARD

SEC. 8. (a) The National Occupational Safety and Health Board is hereby established. The Board shall be composed of five members, having a background either by reason of previous training, education or experience in the field of occupational safety or health, who shall be appointed by the President by and with the consent of the Senate, and shall serve at the pleasure of the President. One of the five members may be designated at any time by the President to serve as Chairman of the Board.

(b) Subchapter II (relating to executive schedule pay rates) of chapter 53 of title V of the United States Code is amended as follows:

(1) Section 5314 (5 U.S.C. 5314) is amended by adding at the end thereof the following: "(54) Chairman, National Occupational Safety and Health Board."

(2) Section 5315 (5 U.S.C. 5315) is amended by adding at the end thereof the following: "(92) Members, National Occupational Safety and Health Board."

(c) The principal office of the Board shall be in the District of Columbia. The Board shall have an official seal which shall be judicially noticed and which shall be preserved in the custody of the Secretary of the Board.

(d) The Chairman of the Board shall, without regard to the civil service laws, appoint and prescribe the duties of a Secretary of the Board.

(e) The Chairman shall be responsible on behalf of the Board for the administrative operations of the Board, and shall appoint, in accordance with the civil service laws, such officers, hearing examiners, agents, attorneys, and employees as are deemed necessary and to fix their compensation in accordance with the Classification Act of 1949, as amended.

(f) Three members of the Board shall constitute a quorum.

(g) The Board is authorized to employ experts, advisors, and consultants or organizations thereof as authorized by section 3109 of title 5, United States Code, and allow them while away from their homes or regular places of business, travel expenses (including per diem in lieu of subsistence) as authorized by section 5703(b) of title 5, United States Code, for persons in the Government service employed intermittently, while so employed.

(h) To carry out its functions under this Act, the Board is authorized to issue subpoenas for the attendance and testimony of witnesses and the production of relevant papers, books, and documents and administer oaths. Witnesses summoned before the Board shall be paid the same fees and mileage that are paid witnesses in the courts of the United States.

(i) The Board may order testimony to be taken by deposition in any proceeding pending before it at any stage of such proceeding. Reasonable notice must first be given in writing by the Board or by the party or his attorney of record, which notice shall state the name of the witness and the time and place of the taking of his deposition. Any person may be compelled to appear and depose, and to produce books, papers, or documents, in the same manner as witnesses may be compelled to appear and testify and produce like documentary evidence before the Board, as provided in subsection (j) of this section. Witnesses whose depositions are taken under this subsection, and the persons taking such depositions, shall be entitled to the same fees as are paid for like services in the courts of the United States.

(j) In the case of contumacy by, or refusal to obey a subpoena served upon any person under this section, the Federal district court for any district in which such person is found or resides or transacts business, upon application by the United States, and after notice to such person and hearing, shall have jurisdiction to issue an order requiring such person to appear and produce documents before the Board, or both; and any failure to obey such order of the court may be punished by such court as a contempt thereof.

(k) The Board is authorized to make such rules as are necessary for the orderly transaction of its proceedings.

DUTIES OF THE SECRETARY—INSPECTIONS, INVESTIGATIONS, AND REPORTS

SEC. 9. (a) In order to carry out the purposes of this Act, the Secretary, upon presenting appropriate credentials to the owner, operator, or agent in charge, is authorized—

(1) to enter without delay and at reasonable times any factory, plant, establishment,

construction site, or other area, workplace or environment where work is performed by an employee of an employer; and

(2) to question any such employee and to inspect and investigate during regular working hours and at other reasonable times and within reasonable limits and in a reasonable manner, any such area, workplace, or environment, and all pertinent conditions, structures, machines, apparatus, devices, equipment, and materials therein.

(b) If the employer, or his representative, accompanies the Secretary or his designated representative during the conduct of all or any part of an inspection, a representative authorized by the employees shall also be given an opportunity to do so.

(c) Each employer shall make, keep, and preserve for such period of time, and make available to the Secretary such record of his activities concerning the requirements of this Act as the Secretary may prescribe by regulation or order as necessary or appropriate for carrying out his duties under this Act.

(d) In making his inspections and investigations under this Act the Secretary may require the attendance and testimony of witnesses and the production of evidence under oath. Witnesses shall be paid the same fees and mileage that are paid witnesses in the courts of the United States. In case of contumacy, failure, or refusal of any person to obey such an order, any district court of the United States or the United States courts of any territory or possession, within the jurisdiction of which such person is found, or resides or transacts business, upon the application by the Secretary, shall have jurisdiction to issue to such person an order requiring such person to appear to produce evidence if, as, and when so ordered, and to give testimony relating to the matter under investigation or in question; and any failure to obey such order of the court may be punished by said court as a contempt thereof.

(e) In carrying out his responsibilities under this Act, the Secretary is authorized to—

(1) use, with the consent of any Federal agency, the services, facilities, and employees of such agency with or without reimbursement, and with the consent of any State or political subdivision thereof, accept and use the services, facilities, and employees of the agencies of such State or subdivision with or without reimbursement; and

(2) employ experts and consultants or organizations thereof as authorized by section 3109 of title 5, United States Code, except that contracts for such employment may be renewed annually; compensate individuals so employed at rates not in excess of the rate specified at the time of service for grade GS–18 in section 5332 of title 5, United States Code, including travel time, and allow them while away from their homes or regular places of business, travel expenses (including per diem in lieu of subsistence) as authorized by section 5703 of title 5, United States Code, for persons in the Government service employed intermittently, while so employed.

(3) delegate his authority under subsection (a) of this section to any agency of the Federal Government with or without reimbursement and with its consent to any State agency or agencies designated by the Governor of the State and with or without reimbursement and under conditions agreed upon by the Secretary and such State agency or agencies.

(f) Any information obtained by the Secretary, the Secretary of Health, Education, and Welfare, or a State agency under this Act shall be obtained with a minimum burden upon employers, especially those operating small businesses. Unnecessary duplication of efforts in obtaining information shall be reduced to the maximum extent feasible.

(g) The Secretary shall prescribe such rules and regulations as he may deem necessary to carry out his responsibilities under this Act, including rules and regulations dealing with the inspection of an employer's establishment.

(h) There are hereby authorized to be appropriated such sums as the Congress shall deem necessary to enable the Secretary to purchase equipment which he determines as necessary to measure the exposure of employees to working environments which might cause cumulative or latent ill effects.

CITATIONS AND SAFETY AND HEALTH APPEALS COMMISSION HEARINGS

SEC. 10. (a) If, upon the basis of an inspection or investigation, the Secretary believes that an employer has violated the requirements of section 5, 6, or 9(c) of this Act, or subsection (e) of this section, or regulations prescribed pursuant to this Act, he shall issue a citation to the employer unless the violation is *de minimis*. This citation shall be in writing and describe with particularity the nature of the violation, including a reference to the requirement, standard, rule, order or regulation alleged to have been violated.

(b) In addition, the citation shall include—

(1) the amount of any proposed civil penalties; and

(2) a reasonable time within which the employer shall correct the violation.

(c) The Secretary shall issue each citation within 45 days from the occurrence of the alleged violation but for good cause the Secretary may extend such period up to a maximum of 90 days from such occurrence.

(d) If an employer notifies the Secretary that he intends to contest a citation issued under this section, the Secretary shall notify the Safety and Health Appeals Commission of the employer's intention and the Safety and Health Appeals Commission shall afford the employer an opportunity for a hearing as provided in section 11 of this Act. However, if the employer fails to notify the Secretary within 15 days after the receipt of the citation of his intention to contest the citation issued by the Secretary, the citation shall, on the day immediately following the expiration of the 15-day period, become a final order of the Safety and Health Appeals Commission.

(e) Each employer who receives a citation under this section shall prominently post such citation or copy thereof at or near each place a violation referred to in the citation occurred.

(f) No citation may be issued under this section after the expiration of three months following the occurrence of any violation.

(g) Whenever the Secretary compromises, mitigates, or settles any penalty assessed under this Act, he shall include a statement of the reasons for such action, and such statement shall be published in the Federal Register.

OCCUPATIONAL SAFETY AND HEALTH APPEALS COMMISSION

SEC. 11. A. ORGANIZATION AND JURISDICTION.—

(1) STATUS.—The Occupational Safety and Health Appeals Commission is hereby established as an independent agency in the Executive Branch of the Government. The members thereof shall be known as the Chairman of the Commission and the Commissioners of the Occupational Safety and Health Appeals Commission.

(2) JURISDICTION.—The Commission shall have such jurisdiction as is conferred on it by this Act.

(3) MEMBERSHIP.—(a) The Commission shall be composed of three Commissioners, appointed by the President, by and with the advice and consent of the Senate, solely on the grounds of fitness to perform the duties of the office.

(b) The salary of the Chairman of the Commission shall be equal to that provided for the executive level in section 5314, title 5, United States Code, and the salary of the remaining two Commissioners shall be in accordance with the executive level as provided in section 5315, title 5, United States Code.

(c) The terms of office of the Commissioners shall be as follows: one Commissioner shall be appointed for a term of two years, one Commissioner shall be appointed for a term of four years, and the remaining Commissioner for a term of six years, respectively. Their successors shall be appointed for terms of six years each, except that vacancy caused by death, resignation, or removal of a member prior to the expiration of the term for which he was appointed shall be filled only for the remainder of such unexpired term. A commissioner may be removed by the President for inefficiency, neglect of duty, or malfeasance in office.

(d) A Commissioner removed from office in accordance with the provisions of this section shall not be permitted at any time to practice before the Commission.

(4) ORGANIZATION.—(a) The Commission shall have a seal which shall be judicially noticed.

(b) The President may at any time designate one of the three Commissioners to serve as Chairman of the Commission.

(c) A majority of the Commissioners shall constitute a quorum for the transaction of the Commission's business. A vacancy shall not impair its powers nor affect its duties.

(d) The principal office of the Commission shall be in the District of Columbia, but it may sit at any place within the United States giving due consideration to the expeditious conduct of its proceedings and the convenience of the parties.

(5) HEARING EXAMINERS.—(a) The Commission may appoint hearing examiners to conduct such business as the Commission may require. Each hearing examiner shall be an attorney at law and shall be selected from the Civil Service Commission list of individuals eligible for selection as administrative hearing examiners.

(b) Except as otherwise provided in this Act, the hearing examiners shall be subject to the laws governing employees in the classified civil service, except that appointments shall be made without regard to 5 U.S.C. 5108. Each hearing examiner will receive compensation at a rate not less than the GS–16 level.

B. PROCEDURE.—

(1) REPRESENTATION OF PARTIES.—The Secretary or his delegate shall be represented by the Solicitor of Labor or his delegate before the Commission. The respondent shall be represented in accordance with the rules of practice prescribed by the Commission.

(2) RULES OF PRACTICE, PROCEDURE, AND EVIDENCE.—The proceedings of the Commission shall be conducted in accordance with such rules of practice and procedure (other than rules of evidence) as the Commission may prescribe and in accordance with the rules of evidence applicable in trials without a jury in the United States District Court of the District of Columbia.

(3) SERVICE OF PROCESS.—The mailing by certified mail or registered mail of any pleading, decision, order, notice or process in respect of proceedings before the Commission shall be held sufficient service of such pleading, decision, order, notice, or process.

(4) ADMINISTRATION OF OATHS AND PROCUREMENT OF TESTIMONY.—For the efficient administration of the functions vested in the Commission any Commissioner of the Commission, the clerk of the Commission, or any other employee of the Commission designated in writing for the purpose by the Chairman of the Commission, may administer oaths, and any Commissioner may examine witnesses and require, by subpoena ordered by the Commission and signed by the Commissioner (or by the Secretary of the Commission or by any other employee of the Commission when acting under authority from the Secretary of the Commission—

(a) The attendance and testimony of wit-

nesses, and the production of all necessary books, papers, documents, correspondence, and other evidence, from any place in the United States at any designated place of hearing, or

(b) The taking of a deposition before any designated individual competent to administer oaths under this title. In the case of a deposition the testimony shall be reduced to writing by the individual taking the deposition or under his direction and shall then be subscribed by the deponent.

(5) WITNESS FEES.—(a) Any witness summoned or whose deposition is taken shall receive the same fees and mileage as witnesses in courts of the United States.

(b) Such fees and mileage and the expenses of taking any such deposition shall be paid as follows:

(A) In the case of witnesses for the Secretary or his delegate, such payments shall be made by the Secretary or his delegate out of any moneys appropriated for the enforcement of this Act and may be made in advance.

(B) In the case of any other witnesses, such payments shall be made, subject to rules prescribed by the Commission, by the party at whose instance the witness appears or the deposition is taken.

(6) HEARINGS.—Notice and opportunity to be heard upon any proceeding instituted before the Commission shall be given to the respondent and the Secretary or his delegate. If an opportunity to be heard upon the proceedings is given before a hearing examiner of the Commission, neither the respondent nor the Secretary nor his delegate shall be entitled to notice and opportunity to be heard before the Commission upon review, except upon a specific order of the Chairman of the Commission. Hearings before the Commission shall be open to the public, and the testimony, and, if the Commission so requires, the argument, shall be stenographically reported. The Commission is authorized to contract for the reporting of such hearings, and in such contract to fix the terms and conditions under which transcripts will be supplied by the contractor to the Commission and to others and agencies.

(7) REPORTS AND DECISIONS.—(a) A report upon any proceeding instituted before the Commission and a decision thereon shall be made as quickly as practicable. The decision shall be made by a Commissioner in accordance with the report of the Commission, and such decision so made shall, when entered, be the decision of the Commission.

(b) It shall be the duty of the Commission to include in its report upon any proceeding its findings of fact or opinion or memorandum opinion. The Commission shall report in writing all its findings of fact, opinions, and memorandum opinions.

(c) A decision of the Commission dismissing the proceeding shall be considered as its decision.

(8) PROCEDURES IN REGARD TO THE HEARING EXAMINERS.—(a) A hearing examiner shall hear, and make a determination upon, any proceeding instituted before the Commission and any motion in connection therewith, assigned to such hearing examiner by the Chairman of the Commission, and shall make a report of any such determination which constitutes his final disposition of the proceeding.

(b) The report of the hearing examiner shall become the report of the Commission within 30 days after such report by the hearing examiner unless within such period any Commissioner has directed that such report shall be reviewed by the Commission. Any preliminary action by a hearing examiner which does not form the basis for the entry of the final decision shall not be subject to review by the Commission except in accordance with such rules as the Commission may prescribe. The report of a hearing examiner shall not be a part of the record in any case in which the Chairman directs that such report shall be reviewed by the Commission.

(9) PUBLICITY OF PROCEEDINGS.—All reports of the Commission and all evidence received by the Commission, including a transcript of the stenographic report of the hearings, shall be public records open to the inspection of the public; except that after the decision of the Commission in any proceeding which has become final the Commission may, upon motion of the respondent or the Secretary or his delegate, permit the withdrawal by the party entitled thereto of originals of books, documents, and records, and of models, diagrams, and other exhibits, introduced in evidence before the Commission; or the Commission may, on its own motion, make such other disposition thereof as it deems advisable.

(10) PUBLICATION OF REPORTS.—The Commission shall provide for the publication of its reports at the Government Printing Office in such form and manner as may be best adapted for public information and use, and such authorized publication shall be competent evidence of the reports of the Commission therein contained in all courts of the United States and of the several States without any further proof or authentication thereof. Such reports shall be subject to sale in the same manner and upon the same terms as other public documents.

(11) Upon issuance of a citation and notification of the Commission, pursuant to section 10, the Commission shall afford an opportunity for a hearing, and shall issue such orders, and make such decisions, based upon findings of fact, as are deemed necessary to enforce the Act.

C. MISCELLANEOUS PROVISIONS.—

(1) EMPLOYEES.—(a) Appointment and Compensation.

The Commission is authorized in accordance with the civil service laws to appoint, and in accordance with the Classification Act of 1949 (63 Stat. 954; 5 U.S.C. chapter 21), as amended to fix the compensation of such employees, including a Secretary to the Commission, as may be necessary to efficiently execute the functions vested in the Commission.

(b) Expenses for Travel and Subsistence.

The employees of the Commission shall receive their necessary traveling expenses, and expenses for subsistence while traveling on duty and away from their designated stations, as provided in the Travel Expense Act of 1949 (63 Stat. 166; 5 U.S.C. chapter 16).

(2) EXPENDITURES.—The Commission is authorized to make such expenditures (including expenditures for personal services and rent at the seat of Government and elsewhere, and for law books, books of reference, and periodicals), as may be necessary to efficiently execute the functions vested in the Commission. All expenditures of the Commission shall be allowed and paid, out of any moneys appropriated for purposes of the Commission, upon presentation of itemized vouchers therefor signed by the certifying officer designated by the Chairman.

(3) DISPOSITION OF FEES.—All fees received by the Commission shall be covered into the Treasury as miscellaneous receipts.

(4) FEE FOR TRANSCRIPT OF RECORD.—The Commission is authorized to fix a fee, not in excess of the fee fixed by law to be charged and collected therefor by the clerks of the district courts, for comparing, or for preparing and comparing, a transcript of the record, or for copying any record, entry, or other paper and the comparison and certification thereof.

PROCEDURES TO COUNTERACT IMMINENT DANGERS

SEC. 12. (a) The United States district courts shall have jurisdiction, upon petition of the Secretary, to restrain any conditions or practices in any place of employment which are such that a danger exists which could reasonably be expected to cause death or serious physical harm immediately or before the imminence of such danger can be eliminated through the enforcement procedures otherwise provided by this Act.

(b) Upon the filing of any such petition the district court shall have jurisdiction to grant such injunctive relief or temporary restraining order pending the outcome of an enforcement proceeding pursuant to section 11 of this Act. The proceeding shall be as provided by Rule 65 of the Federal Rules, Civil Procedures, except that no temporary restraining order issued without notice shall be effective for a period longer than 5 days.

(c) Whenever and as soon as an inspector concludes that conditions or practices described in subsection (a) exist in any place of employment, he shall inform the affected employees and employers of the danger and that he is recommending to the Secretary that relief be sought.

(d) If the Secretary unreasonably fails to petition the court for appropriate relief under this section and any employee is injured thereby either physically or financially by reason of such failure on the part of the Secretary, such employee may bring an action against the United States in the Court of Claims in which he may recover the damages he has sustained, including reasonable court costs and attorney's fees.

(e) In any case where a temporary restraining order is obtained under this section by the Secretary, the court which grants such relief shall set a sum which it deems proper for the payment of such costs, damages, and attorney's fees as may be incurred or suffered by any employer who is found to have been wrongfully restrained or enjoined. In no case shall any employer wrongfully restrained or enjoined be entitled to a recovery for costs, damages, and attorney's fees in excess of the sum set by the court.

JUDICIAL PROCEEDINGS

SEC. 13. (a) (1) Any employer required by an order of the Commission to comply with the standards, regulations, or requirements under this Act, or to pay a penalty, may obtain judicial review of such order by filing a petition for review, within sixty days after service of such order, in the United States court of appeals for the circuit wherein the violation is alleged to have occurred or wherein the employer has its principal office. A copy of the petition shall forthwith be transmitted by the clerk of the court to the Commission and to the Secretary.

(2) The Secretary may also obtain judicial review or enforcement of a decision of the Commission as provided in subsection (1) of this section.

(3) Until the record in a case shall have been filed in a court, as herein provided, the Commission may at any time, upon reasonable notice and in such manner as it shall deem proper, modify or set aside, in whole or in part any finding, order or rule made or issued by it.

(4) Upon the filing of a petition for review under this section, such court shall have jurisdiction of the proceeding and shall have power to affirm the order of the Commission, or to set aside in whole or in part, temporarily or permanently, and to enforce such order to the extent that it is affirmed. To the extent that the order of the Commission is affirmed, the court shall thereupon issue its own order requiring compliance with the terms of the order of the Commission. The commencement of proceedings under this paragraph shall not, unless specifically ordered by the court, operate as a stay of the order of the Commission.

(5) No objection to the order of the Commission shall be considered by the court unless such objection was urged before the Commission or unless there were reasonable grounds for failure to do so. The findings of the Commission as to the facts, if supported by substantial evidence on the record considered as a whole, shall be conclusive, but

the court, for good cause shown, may remand the case to the Commission for the taking of additional evidence in such manner and upon such terms and conditions as the court may deem proper, in which event the Commission may make new or modified findings and shall file such findings (which, if supported by substantial evidence on the record considered as a whole, shall be conclusive) and its recommendation, if any, for the modification or setting aside of its original order, with the return of such additional evidence.

(6) The judgment of the court affirming or setting aside, in whole or in part, any order under this subsection shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification as provided in section 1254 of title 28, United States Code.

(7) An order of the Commission shall become final under the same conditions as an order of the Federal Trade Commission under section 45(g) of title 15, U.S.C.

(b) Any interested person affected by the action of the Board in issuing a standard under section 6 may obtain review of such action by the United States Court of Appeals for the District of Columbia by filing in such court within thirty days following the publication of such rule a petition praying that the action of the Board be modified or set aside in whole or in part. A copy of such petition shall forthwith be served upon the Board, and thereupon the Board shall certify and file in the court the record upon which the action complained of was issued as provided in section 2112 of title 28, United States Code. Review by the court shall be in accord with the provisions of section 706 of title 5, United States Code. The court, for good cause shown, may remand the case to the Board to take further evidence, and the Board may thereupon make new or modified findings of fact and may modify its previous action and shall certify to the court the record of the further proceedings. The remedy provided by this subsection for reviewing a standard or rule shall be exclusive. The judgment of the court shall be subject to review by the Supreme Court of the United States upon certiorari or certification as provided in section 1254 of title 28, United States Code. The commencement of a proceeding under this subsection shall not, unless specifically ordered by the court, delay the application of the Board's standards.

(c) Civil penalties owed under this Act shall be paid to the Secretary for deposit into the Treasury of the United States and shall accrue to the United States and may be recovered in a civil suit in the name of the United States brought in the Federal district court in the district where the violation is alleged to have occurred or where the employer has its principal office.

(d) The Federal district courts shall have jurisdiction of actions to collect penalties prescribed in this Act and may provide such additional relief as the court deems appropriate to carry out the order of the Occupational Safety and Health Appeals Commission.

REPRESENTATION IN CIVIL LITIGATION

SEC. 14. Except as provided in section 518 (a) of title 28, United States Code, relating to litigation before the Supreme Court and the Court of Claims, the Solicitor of Labor may appear for and represent the Secretary in any civil litigation brought under this Act but all such litigation shall be subject to the direction and control of the Attorney General.

CONFIDENTIALITY OF TRADE SECRETS

SEC. 15. All information reported to or otherwise obtained by the Secretary or his representative in connection with any inspection or proceeding under this Act which contains or which might reveal a trade secret referred to in section 1905 of title 18 of the United States Code shall be considered confidential for the purpose of that section, except that such information may be disclosed to other officers or employees concerned with carrying out this Act or when essential in any proceeding under this Act. However, any such information shall be recorded and presented off the official public record, and shall be kept and preserved separately.

VARIATIONS, TOLERANCES, AND EXEMPTIONS

SEC. 16. The Board, on the record, after notice and opportunity for a hearing may provide such reasonable limitations and may make such rules and regulations allowing reasonable variations, tolerances, and exemptions to and from any or all provisions of this Act as it may find necessary and proper to avoid serious impairment of the national defense. Such action shall not be in effect for more than six months without notification to affected employees and an opportunity being afforded for a hearing.

PENALTIES

SEC. 17. (a) Any employer who willfully or repeatedly violates the requirements of section 5 of this Act, any standard or rule promulgated pursuant to section 6 of this Act, or regulations prescribed pursuant to this Act, may be assessed a civil penalty of not more than $10,000 for each violation.

(b) Any citation for a serious violation of the requirements of section 5 of this Act, of any standard or rule promulgated pursuant to section 6 of this Act, or of any regulations prescribed pursuant to this Act, shall include a proposed penalty of up to $1,000 for each such violation.

(c) Any employer who violates the requirements of section 5 of this Act, any standard or rule promulgated pursuant to section 6 of this Act, or regulations prescribed pursuant to this Act, and such violation is specifically determined by the Secretary not to be of a serious nature, the Secretary may include in the citation issued for such violation a proposed penalty of up to $1,000 for each such violation.

(d) Any employer who violates any order or citation which has become final in accordance with the provision of section 10 of this Act may be assessed a penalty of up to $1,000 for each such violation. When such violation is of a continuing nature, each day during which it continues shall constitute a separate offense for the purpose of assessing the penalty except where such order or citation is pending review under section 11 of this Act.

(e) Any person who forcibly assaults, resists, opposes, impedes, intimidates, or interferes with any person while engaged in or on account of the performance of inspections or investigatory duties under this Act shall be fined not more than $5,000 or imprisoned not more than three years, or both. Whoever, in the commission of any such acts uses a deadly or dangerous weapon, shall be fined not more than $10,000 or imprisoned not more than ten years or both. Whoever kills a person while engaged in or on account of the performance of inspecting or investigating duties under this Act shall be punished by imprisonment for any term of years or for life.

(f) Any employer who violates any of the posting requirements, as prescribed under the provisions of this Act, shall be assessed by the Commission a civil penalty of up to $1,000 for each such violation.

(g) Any person who discharges or in any other manner discriminates against any employee because such employee has filed any complaint or instituted or caused to be instituted any proceeding under or related to this Act, or has testified or is about to testify in any such proceeding, shall be assessed a civil penalty by the Commission of up to $10,000. Such person may also be subject to a fine of not more than $10,000 or imprisonment of a period not to exceed 10 years or both.

(b) The Commission shall have authority to assess and collect all penalties provided in this section, giving due consideration to the appropriateness of the penalty with respect to the size of the business being charged, the gravity of the violation, the good faith of the employer, and the history of previous violations.

(i) For purposes of this section a serious violation shall be deemed to exist in a place of employment if there is a substantial probability that death or serious physical harm could result from a condition which exists, or from one or more practices, means, methods, operations, or processes which have been adopted or are in use, in such place of employment unless the Secretary determines that the employer did not, and could not with the exercise of reasonable diligence, know of the presence of the violation.

STATE JURISDICTION AND STATE PLANS

SEC. 18. (a) Nothing in this Act shall prevent any State agency or court from assering jurisdiction under State law over any occupational safety or health issue with respect to which no standard is in effect under section 6.

(b) Any State which, at any time, desires to assume responsibility for development and enforcement therein of occupational safety and health standards relating to any occupational safety or health issue with respect to which a Federal standard has been promulgated under section 6 shall submit a State plan for the development of such standards and their enforcement.

(c) The Secretary shall approve the plan submitted by a State under subsection (b), or any modification thereof, if such plan in his judgment—

(1) designates a State agency or agencies as the agency or agencies responsible for administering the plan throughout the State,

(2) provides for the development and enforcement of safety and health standards relating to one or more safety or health issues, which standards (and the enforcement of which standards) are or will be at least as effective in providing safe and healthful employment and places of employment as the standards promulgated under section 6 which relate to the same issues,

(3) provides for a right of entry and inspection of all workplaces subject to the Act which is at least as effective as that provided in section 9(a)(1), and includes a prohibition on advance notice of inspections,

(4) contains satisfactory assurances that such agency or agencies have or will have the legal authority and qualified personnel necessary for the enforcement of such standards,

(5) gives satisfactory assurances that such State will devote adequate funds to the administration and enforcement of such standards,

(6) contains satisfactory assurances that such State will, to the extent permitted by its law, establish and maintain an effective and comprehensive occupational safety and health program applicable to all employees of public agencies of the State and its political subdivisions, which program is as effective as the standards contained in an approved plan,

(7) requires employers in the State to make reports to the Secretary in the same manner and to the same extent as if the plan were not in effect, and

(8) provides that the State agency will make such reports to the Secretary in such form and containing such information, as the Secretary shall from time to time require.

(d) If the Secretary rejects a plan sub-

mitted under subsection (b), he shall afford the State submitting the plan, due notice and opportunity for a hearing before so doing.

(e) After the Secretary approves a State plan submitted under subsection (b), he may, but shall not be required to, exercise his authority under sections 9, 10, 11 and 12 with respect to comparable standards promulgated under section 6, for the period specified in the next sentence. The Secretary may exercise the authority referred to above until he determines, on the basis of actual operations under the State plan, that the criteria set forth in subsection (c) are being applied, but he shall not make such determination for at least three years after the plan's approval under subsection (c). Upon making the determination referred to in the preceding sentence, the provisions of sections 5(b), 9 (except for the purpose of carrying out subsection (c)), 10, 11, and 12, and standards promulgated under section 6 of this Act, shall not apply with respect to any occupational safety or health issues covered under the plan, but the Secretary may retain jurisdiction under the above provisions in any proceeding commenced under sections 10 or 11 before the date of determination.

(f) The Secretary shall, on the basis of reports submitted by the State agency and his own inspections make a continuing evaluation of the manner in which each State having a plan approved under this section is carrying out such plan. Whenever the Secretary finds, after affording due notice and opportunity for a hearing, that in the administration of the State plan there is a failure to comply substantially with any provision of the State plan (or any assurance contained therein), he shall notify the State agency of his withdrawal of approval of such plan and upon receipt of such notice such plan shall cease to be in effect, but the State may retain jurisdiction in any case commenced before the withdrawal of the plan in order to enforce standards under the plan whenever the issues involved do not relate to the reasons for the withdrawal of the plan.

(g) The State may obtain a review of a decision of the Secretary withdrawing approval of or rejecting its plan by the United States court of appeals for the circuit in which the State is located by filing in such court within thirty days following receipt of notice of such decision a petition praying that the action of the Secretary be modified or set aside in whole or in part. A copy of such petition shall forthwith be served upon the Secretary, and thereupon the Secretary shall certify and file in the court the record upon which the decision complained of was issued as provided in section 2112 of title 28, United States Code. Unless the court finds that the Secretary's decision in rejecting a proposed State plan or withdrawing his approval of such a plan to be arbitrary and capricious, the court shall affirm the Secretary's decision. The judgment of the court shall be subject to review by the Supreme Court of the United States upon certiorari or certification as provided in section 1254 of title 28, United States Code.

FEDERAL AGENCY SAFETY PROGRAMS AND RESPONSIBILITIES

SEC. 19. (a) It shall be the responsibility of the head of each Federal agency to establish and maintain an effective and comprehensive occupational safety and health program which is consistent with the standards promulgated under section 6. The head of each agency shall (after consultation with representatives of the employees thereof)—

(1) provide safe and healthful places and conditions of employment, consistent with the standards set under section 6;

(2) acquire, maintain, and require the use of safety equipment, personal protective equipment, and devices reasonably necessary to protect employees;

(3) keep adequate records of all occupational accidents and illnesses for proper evaluation and necessary corrective action;

(4) consult with the Secretary with regard to the adequacy as to form and content of records kept pursuant to subsection (a)(3) of this section; and

(5) make an annual report to the Secretary with respect to occupational accidents and injuries and the agencys program under this section. Such report shall include any report submitted under section 7902(e)(2) of title 5, United States Code.

(b) The Secretary shall report to the President a summary or digest of reports submitted to him under subsection (a)(5) of this section, together with his evaluations of and recommendations derived from such reports. The President shall transmit annually to the Senate and House of Representatives a report of the activities of Federal agencies under this section.

(c) Section 7902(c)(1) of title 5, United States Code is amended by inserting after "agencies" the following: "and of labor organizations representing employees".

(d) The Secretary shall have access to records and reports kept and filed by Federal agencies pursuant to subsections (a)(3) and (5) of this section unless those records and reports are specifically required by Executive order to be kept secret in the interest of the national defense or foreign policy, in which case the Secretary shall have access to such information as will not jeopardize national defense or foreign policy.

TRAINING AND EMPLOYEE EDUCATION

SEC. 20. (a) The Secretary of Health, Education, and Welfare, after consultation with the Secretary of Labor, the Board and with other appropriate Federal departments and agencies, shall conduct, directly or by grants or contracts (1) education programs to provide an adequate supply of qualified personnel to carry out the purposes of this Act, and (2) informational programs on the importance of and proper use of adequate safety and health equipment.

(b) The Secretary is also authorized to conduct (directly or by grants or contracts) short-term training of personnel engaged in work related to his responsibilities under this Act.

(c) The Secretary, in consultation with the Secretary of Health, Education, and Welfare, shall provide for the establishment and supervision of programs for the education and training of employers and employees in the recognition, avoidance, and prevention of unsafe or unhealthful working conditions in employments covered by this Act, and to consult with and advise employers and employees, and organizations representing employers and employees as to effective means of preventing occupational injuries and illnesses.

GRANTS TO THE STATES

SEC. 21. (a) The Secretary is authorized, during the fiscal year ending June 30, 1971, and the two succeeding fiscal years, to make grants to the States which have designated a State agency under section 18(c) to assist them (1) in identifying their needs and responsibilities in the area of occupational safety and health, (2) in developing State plans under section 18 or (3) in developing plans for—

(A) establishing systems for the collection of information concerning the nature and frequency of occupational injuries and diseases;

(B) increasing the expertise and enforcement capabilities of their personnel engaged in occupational safety and health programs; or

(C) otherwise improving the administration and enforcement of State occupational safety and health laws, including standards thereunder, consistent with the objectives of this Act.

(b) The Secretary is authorized, during the fiscal year ending June 30, 1971, and the two succeeding fiscal years, to make grants to the States for experimental and demonstration projects consistent with the objectives set forth in subsection (a) of this section.

(c) The Governor of the State shall designate the appropriate State agency, or agencies, for receipt of any grant made by the Secretary under this section.

(d) Any State agency, or agencies, designated by the Governor of the State, desiring a grant under this section shall submit an application therefor to the Secretary.

(e) The Secretary shall review the application, and shall, after consultation with the Secretary of Health, Education, and Welfare, approve or reject such application.

(f) The Federal share for each State grant under subsection (a) or (b) of this section may be up to 90 per centum of the State's total cost. In the event the Federal share for all States under either such subsection is not the same, the differences among the States shall be established on the basis of objective criteria.

(g) The Secretary is authorized to make grants to the States to assist them in administering and enforcing programs for occupational safety and health contained in State plans approved by the Secretary pursuant to section 18 of this Act. The Federal share for each State grant under this subsection may be up to 50 per centum of the State's total cost. The last sentence of subsection (f) shall be applicable in determining the Federal share under this subsection.

(h) Prior to June 30, 1973, the Secretary shall, after consultation with the Secretary of Health, Education, and Welfare, transmit a report to tne President and to Congress, describing the experience under the program and making any recommendations he may deem appropriate.

ECONOMIC ASSISTANCE TO SMALL BUSINESSES

SEC. 22. (a) Section 7(b) of the Small Business Act, as amended, is amended—

(1) by striking out the period at the end of "paragraph (5)" and inserting in lieu thereof "; and"; and

(2) by adding after paragraph (5) a new paragraph as follows:

"(6) to make such loans (either directly or in cooperation with banks or other lending institutions through agreements to participate on an immediate or deferred basis) as the Administration may determine to be necessary or appropriate to assist any small business concern in affecting additions to or alterations in the equipment, facilities, or methods of operation of such business in order to comply with the applicable standards promulgated pursuant to section 6 of the Occupational Safety and Health Act or standards adopted by a State pursuant to a plan approved under section 18 of the Occupational Safety and Health Act, if the Administration determines that such concern is likely to suffer substantial economic injury without assistance under this paragraph."

(b) The third sentence of section 7(b) of the Small Business Act, as amended, is amended by striking out "or (5)" after "paragraph (3)" and inserting a comma followed by "(5) or (6)".

(c) Section 4(c)(1) of the Small Business Act, as amended, is amended by inserting "7(b)(6)," after "7(b)(5),".

(d) Loans may also be made or guaranteed for the purposes set forth in section 7(b)(6) of the Small Business Act, as amended, pursuant to the provisions of section 202 of the Public Works and Economic Development Act of 1965, as amended.

RESEARCH AND RELATED ACTIVITIES

SEC. 23. (a)(1) The Secretary of Health, Education, and Welfare, after consultation with the Secretary, the Board and with other appropriate Federal departments or agencies, shall conduct (directly or by grants or con-

tracts) research, experiments, and demonstrations relating to occupational safety and health, including studies of psychological factors involved, and relating to innovative methods, techniques, and approaches for dealing with occupational safety and health problems.

(2) The Secretary of Health, Education, and Welfare shall from time to time consult with the Board in order to develop specific plans for such research, demonstrations, and experiments as are necessary to produce criteria, including criteria identifying toxic substances, enabling the Board to meet its responsibility for the formulation of safety and health standards under this Act; and the Secretary of Health, Education, and Welfare, on the basis of such research, demonstrations, and experiments and any other information available to him, shall develop and publish at least annually such criteria as will effectuate the purposes of this Act.

(3) The Secretary of Health, Education, and Welfare shall also conduct special research, experiments, and demonstrations relating to occupational safety and health as are necessary to explore new problems, including those created by new technology in occupational safety and health, which may require ameliorative action beyond that which is otherwise provided for in the operating provisions of this Act. The Secretary of Health, Education, and Welfare shall also conduct research into the motivational and behavioral factors relating to the field of occupational safety and health.

(4) The Secretary of Health, Education, and Welfare shall publish within six months of enactment of this Act and thereafter as needed but at least annually a list of all known toxic substances by generic family or other useful grouping, and the concentrations at which such toxicity is known to occur.

(5) The Board shall respond, as soon as possible, to a request by any employer or employee for a determination whether or not any substance normally found in a working place has toxic or harmful effects in such concentration as used or found;

(b) The Secretary of Health, Education, and Welfare is authorized to make inspections and question employers and employees as provided in section 9 of this Act in order to carry out his functions and responsibilities under this section.

(c) The Secretary is authorized to enter into contracts, agreements, or other arrangements with appropriate public agencies or private organizations for the purpose of conducting studies relating to his responsibilities under this Act. In carrying out his responsibilities under this subsection, the Secretary and the Secretary of Health, Education, and Welfare shall cooperate in order to avoid any duplication of efforts under this section.

(d) Information obtained by the Secretary, the Board and the Secretary of Health, Education, and Welfare under this section shall be disseminated by the Secretary to employers and employees and organizations thereof.

STATISTICS

SEC. 24 (a). In order to further the purposes of this Act, the Secretary shall develop and maintain an effective program of collection, compilation, and analysis of occupational safety and health statistics. Such program may cover all employments whether or not subject to any other provisions of this Act but shall not cover employments excluded by section 4 of the Act.

(2) To carry out his duties under subsection (a) of this section, the Secretary may:

(1) Promote, encourage, or directly engage in programs of studies, information and communication concerning occupational safety and health statistics.

(2) Make grants to States or political subdivisions thereof in order to assist them in developing and administering programs dealing with occupational safety and health statistics.

(3) Arrange, through grants or contracts, for the conduct of such research and investigations as give promise of furthering the objectives of this section.

(c) The Federal share for each State grant under subsection (b) of this setcion may be up to 50 per centum of the State's total cost.

(d) The Secretary may, with the consent of any State or political subdivision thereof, accept and use the services, facilities, and employees of the agencies of such State or political subdivision, with or without reimbursement, in order to assist him in carrying out his functions under this section.

(e) On the basis of the records made and kept pursuant to section 9(c) of this Act, employers shall file such reports with the Secretary as he shall prescribe by regulation, as necessary to carry out his functions under this Act.

(f) Agreements between the Department of Labor and the States pertaining to the collection of occupational safety and health statistics already in effect on the effective date of this Act shall remain in effect until superseded by grants or contracts made under this Act.

EFFECT ON OTHER LAWS

SEC. 25. (a) Nothing in this Act shall be construed or held to supersede or in any manner affect any workmen's compensation law or to enlarge or diminish or affect in any other manner the common law or statutory rights, duties, or liabilities of employers and employees under any law with respect to injuries, occupational or other diseases, or death of employees arising out of, or in the course of, employment.

(b) Nothing in this Act shall apply to working conditions of employees with respect to whom other Federal agencies, and State agencies acting under section 274 of the Atomic Energy Act of 1954, as amended (42 U.S.C. 2021) exercise statutory authority to prescribe or enforce standards or regulations affecting occupational safety or health.

(c) The safety and health standards promulgated under the Walsh-Healey Public Contracts Act (41 U.S.C. 35 et seq.), the Service Contract Act (41 U.S.C. 351 et seq.), and the National Foundation on Arts and Humanities Act (20 U.S.C. 951 et seq.), are deemed repealed and rescinded on the effective date of corresponding standards promulgated under this Act, as determined by the Secretary of Labor to be corresponding standards.

(d) Nothing in this Act shall apply to any employer who is a contractor or subcontractor for construction, alteration, and/or repair of buildings or works, including painting or decorating in the regular course of his business.

(e) The Secretary shall, within three years after the effective date of this Act, report to the Congress his recommendations for legislation to avoid unnecessary duplication and to achieve coordination between this Act and other Federal laws.

(f) Section 2 of the Act of August 9, 1969. (Public Law 91–54, 83 Stat. 96) is hereby amended to read as follows:

"SEC. 2. The first section and section 2 of the Act of August 13, 1962, are each amended by inserting 'and Construction Safety and Health' before 'standards' each time it appears."

(g) Subsection 107 of Public Law 91–54 (83 Stat. 96) is amended to read as follows:

"SEC. 107. (a) (1) It shall be a condition of each contract which is entered into under legislation subject to Reorganization Plan Numbered 14 of 1950 (64 Stat. 1267), and is for construction, alteration, and/or repair, including painting and decorating, that no contractor or subcontractor contracting for any part of the contract work shall require any laborer or mechanic employed in the performance of the contract to work in surroundings or under working conditions which are unsanitary, hazardous, or dangerous to his health or safety, as determined under construction safety and health standards promulgated by the Secretary by regulation based on proceedings pursuant to section 553 of title 5, United States Code, provided that such proceedings include a hearing of the nature authorized by said section. The Secretary of Labor shall consult with the Advisory Committee on Construction Safety and Health created by subsection (f) and shall give due regard to the Committee's recommendations and information in framing proposed rules or subjects and issues in setting standards in accordance with SEC. 443 of title 5 U.S. Code.

"(2) Each employer as defined in section 3(6) of the Occupation Safety and Health Act who is a contractor or subcontractor for construction, alteration, and/or repair of buildings or works, including painting and decorating in the regular course of his business, shall comply with construction safety and health standards promulgated under this section."

(h) Subsection (b) of section 107 of Public Law 91–54 (83 Stat. 96) is amended to read as follows:

"(b) (1) The Secretary is authorized to make inspections and investigations pursuant to sections 9(a)(c), and (d) of the Occupational Safety and Health Act. If upon the basis of inspection or investigation, the Secretary believes that an employer subject to the provisions of section 107(a)(2) has violated any health or safety standard promulgated under section 107(a) of this Act, or has violated the condition required of any contract to which subsection (a) of this section applies, the Secretary shall issue a citation to the employer unless the violation is *de minimis*. The provisions of section 10 (except subsection (c) thereof) of the Occupational Safety and Health Act shall apply to citations issued under this Act. In issuing citations under this Act, the Secretary shall issue each citation at the earliest possible time from the occurrence of the alleged violation but in no event later than 45 days from the occurrence of the alleged violation except that for good cause the Secretary may extend such period up to a maximum of 90 days from such occurrence. The provisions of section 12 of the Occupational Safety and Health Act shall also apply to this Act.

"(2) If, after notice and opportunity for hearing, the Commission determines that a violation has occurred of any condition prescribed by this section for a contract of the type described in clause (1) or (2) of section 103(a) of this Act, the governmental agency for which the contract work is done shall have the right to cancel the contract, and to enter into other contracts for the completion of the contract work, charging any additional cost to the original contractor. If, after notice and opportunity for hearing, the Commission determines that a violation has occurred of any condition prescribed by this section for a contract of the type described in clause 3 of section 103(a), the governmental agency by which financial guarantee, assistance, or insurance for the contract work is provided shall have the right to withhold any such assistance attributable to the performance of the contract. Section 104 of this Act shall not apply to the enforcement of this section."

(i) Subsection (c) of section 107 of Public Law 91–54 (83 Stat. 96) is hereby repealed and subsection (d) of that section is redesignated as subsection "(c)" and is amended to read as follows:

"(c) (1) If the Commission determines on the record after an opportunity for hearing

that by repeated willful or grossly negligent violations of this Act, a contractor or subcontractor has demonstrated that the provisions of subsection (b) of this section and actions by the Secretary under paragraph (3) of this subsection are not effective to protect the safety and health of his employees, the Commission shall make a finding to that effect and shall, not sooner than thirty days after giving notice of the findings to all interested persons, transmit the name of such contractor or subcontractor to the Comptroller General.

"(2) The Comptroller General shall distribute each name so transmitted to him to all agencies of the Government. Unless the Commission otherwise recommends, no contract subject to this section shall be awarded to such contractor or subcontractor or to any person in which such contractor or subcontractor has a substantial interest until three years have elapsed from the date the name is transmitted to the Comptroller General. If, before the end of such three-year period, the Commission, after affording interested persons due notice and opportunity for hearing, is satisfied that a contractor or subcontractor whose name he has transmitted to the Comptroller General will thereafter comply responsibly with the requirements of this section, the Commission shall terminate the application of the preceding sentence to such contractor or subcontractor (and to any person in which the contractor or subcontractor has a substantial interest); and when the Comptroller General is informed of the Commission's action he shall inform all agencies of the Government thereof.

"(3) Any person aggrieved by an action of the commission under subsections (b) or (c) of this section may seek a review of such action in the appropriate United States Court of Appeals pursuant to the provisions of section 13(a) of the Occupational Safety and Health Act. The Secretary may also obtain judicial review or seek enforcement as provided in sections 13(a) and 13(c) and (d), and section 14 of the Occupational Safety and Health Act."

(j) Section 107 of Public Law 91–54 (83 Stat. 96) is amended by adding a new subsection "(d)" immediately after the new section "(c)". Subsection (e) of section 107 of Public Law 91–54 (83 Stat. 96) is hereby redesignated as subsection "(f)" and subsection (f) of section 107 of Public Law 91–54 (83 Stat. 96) is accordingly redesignated as subsection "(g)". The new subsection "(d)" shall read as follows:

"(d) (1) Any employer who willfully or repeatedly violates the standards promulgated by the Secretary under section 107(a) of this Act, may be assessed a civil penalty of not more than $10,000 for each violation.

"(2) Any citation for a serious violation of the standards promulgated by the Secretary under section 107(a) of this Act shall include a proposed penalty of up to $1,000 for each such violation.

"(3) Any employer who violates the standards promulgated by the Secretary under section 107(a) of this Act and such violation is specifically determined by the Secretary not to be of a serious nature, the Secretary may include in the citation issued for such a violation a proposed penalty of up to $1,000 for each such violation.

"(4) Any employer who violates any order or citation which has become final in accordance with the provisions of section 10 of the Occupational Safety and Health Act may be assessed a penalty of up to $1,000 for each such violation. When such violation is of a continuing nature, each day during which it continues shall constitute a separate offense for the purpose of assessing the penalty except where such order or citation is pending review under section 11 of the Occupational Safety and Health Act.

"(5) Any employer who violates any of the posting requirements, as prescribed in section 10(e) of the Occupational Safety and Health Act, shall be assessed by the Commission a civil penalty of up to $1,000 for each such violation.

"(6) Any person who discharges or in any other manner discriminates against any employee because such employee has filed any complaint or instituted or caused to be instituted any proceeding under or related to this Act, or has testified or is about to testify in any such proceeding, shall be assessed a civil penalty by the Commission of up to $10,000. Such person may also be subject to a fine of not more than $10,000 or imprisonment of a period not to exceed 10 years, or both.

"(7) Any person who forcibly assaults, resists, opposes, impedes, intimidates, or interferes with any person while engaged in or on account of the performance of inspections or investigatory duties under this Act shall be fined not more than $5,000 or imprisoned not more than three years, or both. Whoever, in the commission of any such acts, uses a deadly or dangerous weapon, shall be fined not more than $10,000 or imprisoned not more than 10 years or both. Whoever kills a person while engaged in or on account of the performance of inspecting or investigating duties under this Act shall be punished by imprisonment for any term of years or for life.

"(8) The Commission shall have authority to assess and collect all penalties provided in this section, giving due consideration to the appropriateness of the penalty with respect to the size of the business being charged, the gravity of the violation, the good faith of the employer, and the history of previous violations.

"(9) For the purpose of this subsection a serious violation shall be deemed to exist in a place of employment if there is a substantial probability that death or serious physical harm could result from a condition which exists, or from one or more practices, means, methods, operations, or processes which have been adopted or are in use, in such place of employment unless the Secretary determines that the employer did not, and could not with the exercise of reasonable diligence, know of the presence of the violation."

AUDITS

SEC. 26. (a) Each recipient of a grant under this Act shall keep such records as the Secretary shall prescribe, including records which fully disclose the amount and disposition by such recipient of the proceeds of such grant, the total cost of the project or undertaking in connection with which such grant is made or used, and the amount of that portion of the cost of the project or undertaking supplied by other sources, and such other records as will facilitate an effective audit.

(b) The Secretary and the Comptroller General of the United States, or any of their duly authorized representatives, shall have access for the purpose of audit and examination to any book, documents, papers, and records of the recipients of any grant under this Act that are pertinent to any such grant.

REPORTS

SEC. 27. Within one hundred and twenty days following the convening of each regular session of each Congress, the Secretary and the Secretary of Health, Education, and Welfare shall each prepare and submit to the President for transmittal to the Congress a report upon the subject matter of this Act, the progress concerning the achievement of its purposes, the needs and requirements in the field of occupational safety and health, and any other relevant information, and including any recommendations to effectuate the purposes of this Act.

APPROPRIATIONS

SEC. 28. There are authorized to be appropriated to carry out this Act for each fiscal year such sums as the Congress shall deem necessary.

EFFECTIVE DATE

SEC. 29. This Act shall take effect 120 days after the date of its enactment.

SEPARABILITY

SEC. 30. If any provision of this Act, or the application of such provision to any person or circumstance, shall be held invalid, the remainder of this Act, or the application of such provision to persons or circumstances other than those as to which it is held invalid, shall not be affected thereby.

SECTION-BY-SECTION ANALYSIS OF PROPOSED SUBSTITUTE FOR H.R. 16785 ON OCCUPATIONAL SAFETY AND HEALTH

SECTION 1—SHORT TITLE

This section provides that the Act may be cited as the "Occupational Safety and Health Act."

SECTION 2—CONGRESSIONAL FINDINGS AND PURPOSE

This section states a congressional finding that occupational injuries and illnesses imposes a substantial burden upon interstate commerce. The purpose of the bill is stated to be the assurance of safe and healthful working conditions and to preserve our human resources. This purpose is attained; (1) encouraging employers to reduce the number of occupational injuries and health hazards in their establishments and to stimulate employers to institute new and perfect existing programs for providing safe and healthful working conditions; (2) providing for a separate but dependent responsibilities and rights on the part of employers and employees with respect to achieving a safe and healthful work environment; (3) creating a National Occupational Safety and Health Board to be appointed by the President for the purpose of setting mandatory occupational safety and health standards; (4) building upon advances already made through employer initiative in providing safe and healthful working conditions; (5) providing for comprehensive research concerning occupational safety and health with special emphasis on health problems; (6) providing criteria which will assure that no employee will suffer diminished health and functional capacity as a result of work experience; (7) providing for training programs; (8) providing for effective enforcement of the standards, including a prohibition on advance notice of any inspection; (9) encouraging the States to assume the fullest responsibility for administering and enforcing occupational safety and health laws; (10) providing assistance to the States in conducting research and development in carrying out their responsibilities under the Act, and to improve the administration and enforcement of State standards established under plans as approved by the Secretary of Labor; (11) providing for appropriate reporting procedures for accidents and injuries; and (12) encouraging joint labor-management efforts to reduce the number of occupational injuries and diseases.

SECTION 3—DEFINITIONS

This section contains definitions of certain terms used in the bill. The term "Secretary" means the Secretary of Labor. The term "Safety and Health Appeals Commission" means the Occupational Safety and Health Appeals Commission as established under the Act. The term "Board" means the National Occupational Safety and Health Board as established under the Act. The terms "commerce" and "person" are also defined. The term "employer" means a person engaged in a business affecting commerce who has em-

ployees, but does not include: the United States or any State or political subdivision of a State. The term "employee" means an employee of an employer who is employed in a business of his employer which affects commerce. The term "State" includes a State of the United States, the District of Columbia, Puerto Rico, the Virgin Islands, American Samoa, Guam, and the Trust Territory of the Pacific Islands. The term "occupational safety and health standard" is defined as a standard which requires conditions (or the adoption or use of one or more practices, means, methods, operations, or processes) reasonably necessary to provide safe or healthful employment and places of employment, and the term "national consensus standard" is defined as any occupational safety and health standard or modification thereof which the Board determines after consultation with other Federal agencies, has been adopted by a nationally recognized public or private standards-producing organization, using the consensus method through which the views of interested and affected parties are considered. The term "established Federal standard" means any operative occupational safety and health standard already established by any agency of the United States, or contained in any Act of Congress in force on the date of enactment of this Act.

SECTION 4—APPLICABILITY OF ACT

This section designates geographic application of act and provides that in areas where there are no Federal district courts having jurisdiction, the Secretary of the Interior shall provide for judicial enforcement.

SECTION 5—DUTIES OF EMPLOYERS

Subsection (a) provides that each employer must provide employment free from any readily apparent hazards which are causing or likely to cause death or serious physical harm to employees.

Subsection (b) requires each employer to comply with standards promulgated under the Act.

SECTION 6—OCCUPATIONAL SAFETY AND HEALTH STANDARDS

Subsection (a) authorizes the National Occupational Safety and Health Board (established under section 8 of the Act) to promulgate rules prescribing occupational safety and health standards in accordance with formal APA procedures.

Subsection (b) requires the Board to promulgate as an occupational safety and health standard any national consensus standard or established Federal standard, unless it determines that such standard would not result in improved safety and health. No hearing is required, since this procedure is not subject to the APA, and such standards would take effect immediately upon publication in the Federal Register, and remain in effect until superseded by a standard promulgated pursuant to formal APA requirements (as provided in subsection (a)). This section requires the Board to promulgate such standards as soon as practicable but no later than 3 years after the date of enactment.

Subsection (c) provides that whenever the Board promulgates any standard, makes any rule, order, decision, or grants and exemption or extension of time, it shall include a statement of the reasons for such action, and such statement shall be published in the Federal Register. The Board must also include in any rule it issues, which differs from an existing national consensus standard, a statement of why its rule better effectuates the purposes of the Act.

Subsection (d) authorizes any agency to participate in rulemaking.

Subsection (e) provides that the Secretaries of Labor and HEW may submit at any time a request to the Board to establish or modify a standard. The board must commence standard-setting procedures within 60 days of receipt of the request.

Subsection (f) authorizes any interested person to make a similar request to the Board, and the Board must give such requests due consideration.

Subsection (g) provides for the submission of additional evidence following the expiration of a standards-setting hearing.

Subsection (h) provides that the Board in determining priorities for setting occupational safety and health standards must give due regard to the needs of industries, trades, etc., for these standards.

Subsection (i) provides in paragraph (1) that where no standard exists, the Board may issue an emergency temporary standard which takes effect immediately on publication in the Federal Register. The Board is not required to hold any hearing prior to issuing such standards. But this authority is narrowly circumscribed. The Board may issue an emergency temporary standard only if it first determines (A) that employees are exposed to grave danger from exposure to substances determined (with the aid of HEW research; see sec. 17(a)(2)) to be toxic, or to new hazards resulting from the introduction of new processes and (B) that such emergency standard is necessary to protect employees from the type of danger just described.

Paragraph (2) of subsection (i) provides that an emergency temporary standard shall remain in effect until replaced by a standard issue through formal APA procedures.

Paragraph (3) requires the Board, as soon as the emergency temporary standard is published in the Federal Register, to start formal APA procedures, and promulgate its standard within 6 months of the date of publication of the emergency temporary standard. In these instances the emergency temporary standard is to serve as the notice of proposed rulemaking.

Subsection (j) authorizes the Board to appoint advisory committees to assist in its standard-setting function, where the Board desires such assistance. If appointed, the advisory committee shall submit its recommendations within 270 days (or longer or shorter if the Board prescribes, but in no event longer than 1 year and 3 months). These recommendations are printed in the Federal Register as notice of proposed rulemaking.

Paragraph (2) of subsection (j) provides that within 4 months, or as soon as practicable, after submission of advisory committee recommendations or the Board's proposals (made where an advisory committee has failed to submit recommendations), the Board shall give notice of a hearing. Such notice (including time, place, subjects, issues, and recommendations) is to be published in the Federal Register 30 days prior to the hearing. Only those who have submitted comments prior to the hearing shall have a right to submit oral evidence at the hearing but nothing shall prevent anyone from submitting written views for consideration.

Subsection (k) provides that, within 60 days (where an advisory committee is utilized) or 120 days (if no advisory committee) after completion of a hearing on the record, the Board shall issue a rule promulgating, modifying, or revoking an occupational safety and health standard or make a determination that a rule should not be issued. Such rule may contain a provision delaying the effective date up to 90 days to permit familiarization of employees and employers with the standard and its terms.

Subsection (l) permits employers to apply to the Board for an exemption from the standards. The applicant must show the Board by a preponderance of the evidence, that he is providing, or will provide, working conditions which are as safe and healthful as if he were to comply with the standards. The exemption, if granted, would be in the form of a rule issued by the Board after formal hearings and inspections. Affected employees must be given notice of an application for an exemption and also afforded an opportunity to participate in the hearing.

The rule of the Board shall prescribe the conditions, practices, means, methods, etc., which an employer-applicant must adopt and utilize to the extent that they differ from the standard in question.

Lastly, subsection (l) provides that the exemption-rule may be modified or revoked at any time after six months following its issuance upon application by the employer, the employees, or by the Board on its own motion. Procedures for modification or revocation are the same as those used for granting the exemption.

Subsection (m) requires that standards include any posting or labeling requirements which are necessary to place affected employees on notice of any hazards as well as suggest methods of avoiding the hazards.

SECTION 7—NATIONAL ADVISORY COMMITTEE

Subsection (a)–(d) direct the Secretary to appoint a National Advisory Committee on Occupational Safety and Health, consisting of 12 members, four of whom are to be designated by the Secretary of HEW, composed equally of representatives of management, labor, and the public, and selected upon the basis of their experience and competence in the field of occupational safety and health. The Committee is directed to advise, consult with, and make recommendations to, the Secretary on matters relating to the administration of the bill. The Committee must hold at least 2 meetings a year. All committee meetings must be open to the public and a transcript must be kept.

Subsection (e) authorizes the Board to appoint such advisory committees as it deems necessary to assist it in promulgating occupational safety and health standards under section 6 of the Act. The number of members on an advisory committee shall not exceed 15. The Board shall designate specific representatives to serve, as well as other public members qualified by knowledge and experience, but the number of persons so appointed to any advisory committee shall not exceed the number appointed to such committee as representatives of Federal and State agencies.

This subsection also provides for the compensation of advisory committee members but forbids one to serve as a committee member (other than representatives of employers and employees) who has an economic interest in any proposed rule.

All committee meetings are to be open and an accurate record is to be kept.

SECTION 8—NATIONAL OCCUPATIONAL SAFETY AND HEALTH BOARD

This section provides for the appointment by the President of a five-member Board to promulgate occupational safety and health standards as authorized by section 6 of the proposal. The Board shall serve at the pleasure of the President and he shall designate its chairman.

Subsections (b) through (k) of the instant section provide the necessary housekeeping and procedural authority for the effective operation of the Board in carrying out its standards-setting functions under the Act.

SECTION 9—DUTIES OF THE SECRETARY: INSPECTIONS, INVESTIGATIONS, AND REPORTS

Subsection (a) authorizes the Secretary of Labor to make inspections and investigations in a reasonable manner of places subject to the Act.

Subsection (b) requires that, if an employer or his representative accompanies an inspector during an inspection, a represent-

ative of the employees must also be given an opportunity to accompany the inspector.

Subsection (c) requires employers to keep and make available to the Secretary such records as he may prescribe as necessary for carrying out his duties under the Act.

Subsection (d) provides the Secretary of Labor with subpoena power of books, records, and witnesses.

Subsection (e) authorizes the Secretary to use other Federal agencies and State agencies and to employ experts and consultants to assist him in carrying out his responsibilities under the Act. Appropriate consent and reimbursement provisions are included. The Secretary is also authorized to delegate such authority to other Federal agencies, or to appropriate State agencies with their consent and under conditions agreed upon by the Secretary and the State agency.

Subsection (f) directs the Secretary, the Secretary of HEW, or a State agency to avoid the duplication of effort in obtaining information and to obtain such information in a manner that will place a minimum burden on employers.

Subsection (g) authorizes the Secretary to prescribe rules and regulations for carrying out his functions, including rules and regulations relating to inspections.

Subsection (h) authorizes the appropriation of funds to enable the Secretary to purchase necessary monitoring equipment for the purpose of measuring employee exposure to work environments which might cause cumulative or latent ill effects.

SECTION 10—CITATIONS AND SAFETY AND HEALTH APPEALS COMMISSION HEARINGS

Subsection (a) provides that Secretary shall issue a citation for a violation of the Act's requirements unless the violation is *de minimis*. The citation must be in writing and detail the nature of the violation.

Subsection (b) requires that the citation also include the amount of any proposed penalty and a reasonable time for correction.

Subsection (c) requires the Secretary to issue the citations within 45 days from the occurrence. For good cause the time period may be extended for up to 90 days.

Subsection (d) provides that an employer may obtain a formal hearing on the citation before the Occupational Safety and Appeals Commission (as established under section 11 of the Act). In order to obtain a hearing an employer must notify the Secretary within 15 days after he receives a citation of his intention to contest the citation; the Secretary in turn must notify the Commission. If the employer does not give notice of his intention to contest the citation, it becomes a final order of the Commission the day after the expiration of the 15 day notice period.

Subsection (e) requires employers to post citations near where the violation for which the citation was given occurred.

Subsection (f) limits the time for issuing citations to three months following the occurrence of the violation.

Subsection (g) provides that when the Secretary compromises, mitigates, or settles any penalty he must publish the reasons for his action in the Federal Register.

SECTION 11—OCCUPATIONAL SAFETY AND HEALTH COMMISSION

This section establishes the Occupational Safety and Health Commission for the purpose of adjudicating cases of alleged violations brought before it. The 3-member Commission would be Presidentially appointed with the advice and consent of the Senate for staggered 6-year terms. Qualifications for the position would rest solely on the fitness to perform the duties of the office.

The section also sets forth all of the necessary rule-making, procedural, and housekeeping authority necessary for the proper functioning of the Commission.

SECTION 12—PROCEDURES TO COUNTERACT IMMINENT DANGERS

This section grants jurisdiction to the U.S. district courts to grant appropriate temporary relief in imminent danger situations. Such a danger is one that could reasonably be expected to cause death or serious physical harm before it could be eliminated through the enforcement procedures otherwise provided by the Act. These proceedings are made subject to Rule 65 of the Federal Rules of Civil Procedure, except that no temporary restraining order issued without notice shall be effective for more than 5 days. The courts are authorized to issue such injunctive relief or temporary restraining orders under this section pending the outcome of a section 11 enforcement proceeding.

An inspector is required to inform employees and employers of the imminent danger, and of the fact that he is recommending to the Secretary that appropriate relief, as authorized in this section, be sought.

The section also provides for damages in the Court of Claims for employees, if the Secretary unreasonably fails to seek appropriate injunctive or temporary relief in imminent danger situations. There is also a separate provision for employer damages. Employer damages would be provided by the setting aside by the district court which issues the injunctive or temporary relief a sum to cover costs, damages, and attorney's fees. In no case may an employer recover more than the court sets aside.

SECTION 13—JUDICIAL PROCEEDINGS

Subsection (a) authorizes employers to obtain judicial review of the Occupational Safety and Health Commission's order by filing a petition for review within 60 days of the issuance of the order in a U.S. Court of Appeals in the circuit where the violation is alleged to have occurred. This subsection also authorizes the Secretary to obtain judicial review or enforcement of a Commission order by filing the appropriate petition in the appropriate U.S. Court of Appeals.

Subsection (a) also provides that the Occupational Safety and Health Commission may modify or set aside its findings, orders or rules until such time as the record is filed in a court.

The subsection also grants the U.S. Court of Appeals *jurisdiction* to affirm, set aside or enforce a Commission order. To the extent that the Court affirms an order it must thereupon issue its own order requiring compliance with the terms of the Commission's order.

No objection to the Commission's orders shall be considered unless such objection was urged before the Commission or there were reasonable grounds for failure to urge such objection. The findings of the Commission shall be conclusive if supported by substantial evidence on the record. For good cause a case may be remanded to the Commission for the taking of additional evidence.

The judgment of the Court is made final subject to review by the Supreme Court upon certiorari or certification.

Subsection (b) provides for the exclusive method for obtaining judicial review of the Board's standards as promulgated under section 6 of the Act. Any interested person affected by the action of the Board in issuing a standard may seek such review. Only the United States Court of Appeals for the District of Columbia shall have jurisdiction to entertain a petition for review of a Board standard. The petition must be filed within thirty days following the publication of the rule by the Board. Review by the Court shall be in accordance with the judicial review provisions of the Administrative Procedure Act (5 U.S.C. 706).

For good cause shown, the Court may remand the case to the Board to take further evidence. And, lastly, this subsection provides that a review proceeding shall not, unless specifically ordered by the Court, delay the application of the Board's standards.

Subsection (c) authorizes the Secretary to collect civil penalties; and the subsection also authorizes suit for recovery of such sums.

Subsection (d) grants jurisdiction to the U.S. District Courts with respect to actions brought to collect civil penalties. The courts may also provide any additional relief deemed appropriate in order to enforce an order issued by the Occupational Safety and Health Commission.

SECTION 14—REPRESENTATION IN CIVIL LITIGATION

Provides that the Solicitor of Labor may appear and represent the Secretary in civil litigation subject to the direction of the Attorney General.

SECTION 15—CONFIDENTIALITY OF TRADE SECRETS

This section assures the confidentiality of trade secrets.

SECTION 16—VARIATIONS, TOLERANCES, AND EXEMPTIONS

The Secretary may provide reasonable limitations, variations, tolerances to avoid serious impairment of the national defense; to be effective for no more than 6 months, unless notice and opportunity for hearing is afforded affected employees.

SECTION 17—PENALTIES

Subsection (a) provides that for willful or repeated violations a penalty of up to $10,000 may be assessed for each violation.

Subsection (b) requires that any citation issued for a serious violation of the Act's requirements must include a proposed penalty of up to $1,000 for each violation.

Subsection (c) provides that where the Secretary determines that a violation of the Act's requirement is not of a serious nature, he may include in the citation a proposed penalty of up to $1,000 for each such violation.

Subsection (d) provides that any employer who violates any final order may be assessed a penalty of up to $1,000 for each violation. If such violation is of a continuing nature each day constitutes a separate offense.

Subsection (e) provides that any person who forcibly resists a person in the performance of his duties under this Act is subject to a $5,000 fine or imprisonment for not more than 3 years or both. The use of a dangerous weapon subjects one to a fine of not more than $10,000 or imprisonment for not more than 10 years. Murder of a person in the performance of his duties subjects one to imprisonment for a term of years or life.

Subsection (f) provides for a penalty of up to $1,000 for each violation of a posting requirement. The Commission would assess such penalties.

Subsection (g) provides a civil penalty of up to $10,000, and a possible criminal fine of up to $10,000 or imprisonment for a period not to exceed 10 years or both for discriminating against employees who exercise their rights pursuant to this Act.

Subsection (h) grants the Occupational Safety and Health Commission the authority to assess and collect penalties.

Subsection (i) defines a serious violation.

SUBSECTION 18—STATE JURISDICTION AND STATE PLANS

Subsection (a) provides that a State may assert jurisdiction under State law over any occupational safety or health issue with respect to which no standard is in effect under section 6 (occupational safety and health standards).

Subsection (b) provides that States may submit a state plan for the development and enforcement of standards relating to occupational safety or health issues that have been

dealt with in standards promulgated under section 6.

Subsection (c) provides that the Secretary shall approve the plan submitted by a State under subsection (b) or any modification thereof, if—

(1) a State agency (or agencies) is designated for administering a plan throughout the State;

(2) it provides for the development and enforcement of standards which are or will be at least as effective as section 6 standards;

(3) it provides for the right of entry and inspection of all workplaces subject to the act at least as effective as provided in section 9(a)(1) and includes a prohibition on advance notice of inspections;

(4) it contains assurances of legal authority and qualified State personnel;

(5) it contains assurances of adequate State funds for administration and enforcement;

(6) it contains assurances that the State will to the extent permitted by law establish programs for its employees and employees of its political subdivisions which are as effective as the standards contained in an approved plan;

(7) it requires employers in the State to make reports in the same manner and extent as if the plan were not in effect;

(8) it provides that the State agency will make reports to the Secretary in such form as the Secretary shall from time to time require.

Subsection (d) provides that if the Secretary rejects a plan, he shall afford a State due notice and opportunity for a hearing.

Subsection (e) provides that after approval of a State plan, the Secretary may exercise his authority under sections 9, 10, 11, and 12 with respect to comparable standards promulgated under sections 6 for at least 3 years after the plan's approval under subsection (c). After State plan approval, provisions of sections 5(b), 9 (except for the purposes of carrying out subsection (c)), 10, 11 and 12 shall not apply, but the Secretary may retain jurisdiction under the above provisions in any proceeding commenced under sections 10 and 11 before the date of determination.

Subsection (f) provides that the Secretary continually evaluate a State plan. The Secretary has the power to withdraw approval of a State plan if he finds a failure to comply substantially with any provision of the State plan.

Subsection (g) provides that a State may obtain review of the Secretary's withdrawal of approval or rejection of a plan in the U.S. Court of Appeals. The Secretary's decision shall be sustained unless the court finds that the Secretary's decision was arbitrary and capricious. This subsection provides for further appeal to the Supreme Court.

SECTION 19—FEDERAL AGENCY SAFETY PROGRAMS AND RESPONSIBILITIES

Subsection (a) provides that each Federal agency shall maintain a comprehensive occupational safety and health program consistent with standards promulgated under section 6. The head of each agency, after consultation with representatives of employees, shall provide—

(1) places of employment and conditions consistent with standards under section 6;

(2) acquire and maintain and require the use of safety devices to protect its personnel;

(3) keep adequate records;

(4) consult with the Secretary with respect to the agency's program; and

(5) make an annual report to the Secretary with respect to occupational accidents and injuries.

Subsection (b) provides that the Secretary shall submit a summary of reports submitted to him under subsection (a)(5) to the President. The President shall transmit annually to the Senate and House of Representatives a report of the activities of Federal agencies under this section.

Subsection (c) amends section 7902(c)(1) of title 5, United States Code, by permitting labor organizations representing employees to serve on the President's Federal Safety Council.

Subsection (d) provides that the Secretary shall have access to the records and reports filed by Federal agencies pursuant to the requirements of this Act, unless the records and reports are specifically required by Executive Order to be kept secret in the interest of national defense or foreign policy.

SECTION 20—TRAINING AND EMPLOYEE EDUCATION

Subsection (a) authorizes the Secretary of HEW, after consultation with the Secretary of Labor, other Federal agencies and the Board to conduct directly or by grant or contract, programs

(1) to educate and train peronnel;

(2) to provide informational programs.

Subsection (b) authorizes the Secretary to conduct directly or by grants or contracts short-term training of personnel.

Subsection (c) provides that the Secretary together with the Secretary of HEW shall educate and train employers and employees in the recognition and avoidance of accidents, and consult and advise employers and employees as to means of preventing injuries and illnesses.

SECTION 21—GRANTS TO THE STATES

Subsection (a) provides that the Secretary, during fiscal year 1971, and the 2 succeeding fiscal years, may make grants to State agencies designated under section 18 (c) to assist—

(1) in identifying needs;

(2) in developing plans under section 18;

(3) in developing plans for—

(a) collecting statistical data;

(b) increasing personnel capabilities;

(c) improving administration and enforcement, including standards.

Subsection (b) provides that the Secretary, commencing in fiscal year 1971, and the 2 succeeding fiscal years, shall make experimental and demonstration grants.

Subsection (c) provides that the Governor of a State shall designate the State agency to receive a grant.

Subsection (d) provides that the State agency designated by the Governor shall submit grant applications to the Secretary.

Subsection (e) provides that the Secretary, after review with the Secretary of HEW, shall accept or reject the application for grant.

Subsection (f) provides that the Federal share for each State grant under (a) or (b) of this section may be up to 90 percent. Different percentage distribution among the States shall be established on the basis of objective criteria.

Subsection (g) authorizes the Secretary to make grants to States to assist them in administering and enforcing programs for occupational safety and health contained in State plans. The Federal share may be up to 50 percent of the total cost. Differential in allotments to the States must be based on objective criteria.

Subsection (h) provides that the Secretary must make a report after consultation with the Secretary of HEW to the President and the Congress prior to June 30, 1973.

SECTION 22—ECONOMIC ASSISTANCE TO SMALL BUSINESS

This section authorizes loans (by amending the Small Business Act) to small businesses as are necessary and appropriate to assist them in meeting certain costs resulting from the enactment of this Act.

SECTION 23—HEALTH RESEARCH AND RELATED ACTIVITIES

Subsection (a)(1) of this section directs the Secretary of Health, Education, and Welfare, to conduct research, demonstrations, and experiments relating to occupational safety and health after consultation with the Secretary of Labor, the Board, and other appropriate Federal agencies. The Secretary of Health, Education, and Welfare may conduct these activities either directly or by grants or contracts.

Under subsection (a)(2), the Secretary of Health, Education, and Welfare is directed to consult with the Board in order to develop specific plans for such research, demonstrations, and experiments as are necessary to produce criteria (including criteria for identifying toxic substances) enabling the Board to meet its responsibility for the formulation of safety and health standards under the Act. The Secretary of Health, Education, and Welfare, on the basis of the research, demonstrations, and experiments and any other information available to him, is directed to develop such criteria.

In addition, subsection (a)(3) directs the Secretary of Health, Education, and Welfare to conduct special research which may be necessary to explore new problems in occupational safety and health. This would include problems caused by new technology which may require ameliorative actions beyond the reach of the present Act. Also, the Secretary of HEW is directed to conduct research into the motivational and behavioral factors relating to the field of occupational safety and health.

Subsection (a)(4) requires the Secretary of HEW to publish within six months of enactment and again as needed, but at least annually, a list of known toxic substances.

Subsection (a)(5) requires the Board to respond to requests from employers or employees for a determination of whether a substance found in a workplace is toxic or otherwise harmful.

Subsection (c) of this section authorizes the Secretary of Labor to contract or otherwise arrange for the conduct of studies relating to his responsibilities under the Act by public or private organizations. It provides for consultation between the two Secretaries in order to avoid duplication of efforts.

SECTION 24—STATISTICS

This section directs the Secretary to develop and maintain a broadly based effective program of collection, compilation, and analysis of occupational safety and health statistics. To achieve this purpose, the Secretary is authorized to engage directly in statistical programs and related activities; to make grants to the States to assist them in their programs; and to arrange, through grants or contracts, for the conduct of research or investigations which give promise of furthering the objectives of this section.

Subsection 24(c) provides that the Federal share for each State grant under the statistics section may be up to 50 percent of the State's total cost.

Subsection 24(d) authorizes the Secretary to use State agencies, with consent and with or without reimbursement, to assist him in carrying out his responsibilities under the statistics section.

Subsection 24(e) requires employers to file reports which the Secretary may need to carry out his functions under the statistics section.

Lastly, subsection 24(f) provides that existing agreements between the Department of Labor and the States relating to the collection of occupational safety and health statistics shall remain in effect until later superseded by grants or contracts.

SECTION 25—EFFECT ON OTHER LAWS

Subsection (a) of this section provides that the bill does not alter or affect in any way workmen's compensation law, or any common law or statutory rights, duties, or liabilities of employers and employees under any law with respect to injuries, occupational or other diseases, or death of employees arising out of or in the course of employment.

Subsection (b) provides that nothing in the Act applies to, or authorizes the Board

or the Secretary of Labor to regulate, working conditions of employees with respect to whom another Federal agency, or State agency under section 274 of the Atomic Energy Act of 1954, have statutory authority to prescribe or enforce standards or regulations affecting occupational safety or health.

Subsection (c) provides that the standards promulgated under the Walsh-Healey Public Contracts Act, 41 U.S.C. 35 *et seq.*, the Service Contract Act, 41 U.S.C. 351 *et seq.*, and the National Foundation on Arts and Humanities Act, 20 U.S.C. 951 *et seq.*, are repealed and rescinded on the effective date of corresponding standards promulgated under the Act. The Secretary has the authority to determine what are corresponding standards.

Subsection (e) requires the Secretary to report to Congress within three years after enactment concerning his recommendations for avoiding unnecessary duplication among other Federal laws.

Subsection (d) of this section makes this Act inapplicable to employers in the construction industry. Subsections (f) through (j) place all construction workers under the protection of the "Construction Safety Act" (P.L. 91-54). Specifically, these subsections provide that all construction workers would come under the protection of safety and health standards developed by the Secretary of Labor under the procedures prescribed by the "Construction Safety Act." However, enforcement and adjudication proceedings for alleged violations of occupational safety and health standards (promulgated by the Secretary pursuant to the procedures of the Construction Safety Act), would be conducted pursuant to the procedures of this Act, (Occupational Safety and Health Act). The additional sanctions of contract debarment and cancellation now provided for under the "Construction Safety Act" would remain.

SECTION 26—AUDITS

This section authorizes the Secretary to prescribe recordkeeping requirements with respect to grant programs under the bill. Both the Secretary and the Comptroller General will have access to records relating to these programs.

SECTION 27—REPORTS

The Secretary of Labor, the Board, and the Secretary of Health, Education, and Welfare are required to submit, once every 2 years, a joint report to the President for transmittal to Congress on the progress being made in the field of occupational safety and health and on the needs and requirements in that field. The report may include recommendations.

SECTION 28—OBSERVANCE OF RELIGIOUS BELIEFS

This section provides an exception for those who object to medical examination, immunization or treatment on religious grounds. However, in instances where the failure to obtain a medical examination, immunization, or treatment might be harmful to the safety and health of others the exception would not apply.

SECTION 29—APPROPRIATIONS

This section authorizes necessary appropriations to carry out the purposes of the Act.

SECTION 30—EFFECTIVE DATE

This section provides that the provisions of the Act will go into effect 120 days after enactment.

SECTION 31—SEPARABILITY

This section contains a separability provision.

COMPARATIVE ANALYSIS OF SIGNIFICANT PROVISIONS OF THE HOUSE COMMITTEE REPORTED OCCUPATIONAL SAFETY AND HEALTH BILL (H.R. 16785) AND THE SUBSTITUTE OCCUPATIONAL SAFETY AND HEALTH BILL

H.R. 16785	SUBSTITUTE BILL
I. Coverage	*I. Coverage*
Covers all employers engaged in business affecting inter-state commerce, excluding Federal and State governments (sec. 2-3), but State-plan section requires States to make their plan-standards applicable to both State and local public employees (sec. 17(c)(5)). Also, employers may apply to Secretary of Labor for exemption from specific standards if employer provides working conditions just as safe as Federal-standard conditions (sec. 7(b)).	Same, except State-plan section is modified so as to avoid the conflict of State *versus* local control in applying State standards to public employees (sec. 18(c)(6)); and the employer applies to the *Board* and not to the Secretary of Labor for the exemption (sec. 5(1)).
II. Standards	*II. Standards*
1. Authority To Issue Standards	1. Authority To Issue Standards
Secretary of Labor (secs. 6-7).	Occupational Safety and Health Board, separate and independent of other Federal agencies. Board is composed of five members, all qualified by previous training, education or experience in the field of occupational safety and health; appointed by and serve at the pleasure of the President (secs. 6 and 8).
2. Types of Mandatory Standards	2. Types of Mandatory Standards
(a) *Interim standards* of three kinds must be promulgated by the Secretary of Labor during first 2 years of the new law's existence, unless he decides they will not assure safer and more healthful working conditions: national consensus standards; standards also developed by national organizations but by a non-consensus method; and already existing Federal standards. These interim standards stay in effect until superseded by another interim standard or by a permanent standard. Secretary of Labor must start procedures to set a permanent standard 90 days after interim standard is promulgated (sec. 6).	(a) National consensus standards and already existing Federal standards must be promulgated by *Board*, unless it determines they will not assure safer and more healthful working conditions. Must be issued as soon as practicable, but not later than 3 years after effective date of law and remain effective until superseded by action of the Board.
(b) *Temporary emergency standards* must be promulgated by the Secretary of Labor if needed to combat grave danger from toxic substances or new hazards (sec. 7(c)(1)). These standards stay in effect only 6 months or until procedings to set permannt replacement standards are ended, but there is no time deadline for ending the proceedings or issuing a permanent standard (sec. 7(c)).	(b) Same, except *Board* issues the temporary emergency standards and they stay in effect until replaced by permanent standards which the Board is required to issue within 6 months after temporary emergency standards are issued (sec. 6(i)).
Secretary must conduct an inspection before he promulgates a temporary emergency standard.	No inspection by Secretary of Labor required prior to promulgation of temporary emergency standard.
(c) *Permanent standards*	(c) Also provides for permanent standards.
3. Procedures for Setting Standards	3. Procedures for Setting Standards
(a) Interim standards are issued by Secretary of Labor *following a hearing* which is required but it is of an informal nature (sec. 6).	(a) National consensus standards and already existing Federal standards promulgated by the Board by publishing them in the Federal Register; no hearings or other APA procedures apply (sec. 6(b)).
(b) *Temporary emergency standards* become effective *30 days after publication* in Federal Register (sec. 7(c)(1)).	(b) Temporary emergency standards become effective *immediately* on publication in Federal Register (sec. 6(i)(1)).
(c) *Permanent standards.* In order to set *each* standard, the Secretary of Labor *must* first appoint an Advisory Committe and give Committee up to 270 days (period may be shortened or lengthened by the Secretary of Labor) to submit its recommendations to him. If the Advisory Committee recommendations are timely filed, the Secretary of Labor has up to four months to schedule formal APA hearings on standards plus Advisory Committee recommendations.	(c) *Permanent standards* are set by the Board, using formal APA procedures. The use of *Advisory Committees* is authorized, but not mandatory.
If not timely filed, Secretary of Labor proceeds with formal APA hearing on his own. Standards are promulgated by Secretary 60 days after hearing ends. (sec. 7 (a) and (b)).	Board shall issue a standard 60 days after hearing ends (if Advisory Committee is utilized), and 120 days afterwards (if no Advisory Committe is utilized).
	Also, Secretary of HEW or Secretary of Labor may request the setting or modification of a standard, and the Board must commence standard-setting procedures within 60 days after request is made (sec. 6 (j) through (m)).
For employer exemption from standards, see I. this chart.	For employer exemption from standards, see I. this chart.
4. Judicial Review of Standards	4. Judicial Review of Standards
No express provision for judicial review of standards.	Provides for judicial review in U.S. Court of Appeals for the District of Columbia. This review is exclusive remedy (sec. 13(b)).

COMPARATIVE ANALYSIS OF SIGNIFICANT PROVISIONS OF THE HOUSE COMMITTEE REPORTED OCCUPATIONAL SAFETY AND HEALTH BILL (H.R. 16785) AND THE SUBSTITUTE OCCUPATIONAL SAFETY AND HEALTH BILL—Continued

H.R. 16785—continued	SUBSTITUTE BILL—continued
III. General duty	*III. General duty*
Contains general requirement that employers maintain safe and healthful working conditions. This general duty is in addition to requirement that employers comply with specific standards issued under the Act. (sec. 5).	Contains a precise requirement that employers furnish employment free from readily apparent hazards which are likely to cause death or serious physical harm. (Also requires compliance with specific standards). (sec. 5.)
IV. Enforcement	*IV. Enforcement*
1. In General	1. In General
Enforced by Secretary of Labor in hearings before Labor Dept. hearing examiners. Secretary of Labor's corrective orders may be enforced in the Federal district courts (sec. 11).	Enforced by Secretary of Labor before an independent Federal agency, the Occupational Safety and Health Appeals Commission, set up under sec. 11. Corrective orders of the Commission may be enforced by the Secretary of Labor in the U.S. Courts of Appeals (sec. 10, 11, and 13).
2. Inspections and Investigations	2. Inspections and Investigations
Secretary of Labor is authorized to make inspections and investigations (sec. 9). A representative of the employer and an authorized representative of the employees must be given an opportunity to accompany inspector on his inspections.	Also authorizes Secretary of Labor to make inspections, but the right of an employee-authorized representative to accompany an inspector on inspections is contingent upon the employer's exercising his option to also accompany the inspector.
3. Citations and Civil Penalties	3. Citations and Civil Penalties
There are three types of citations and penalties: (a) Sec. 10(a) provides that where employer violates any standard, exemption order, or reporting requirement and where serious danger potential exists by reason of these violations, then Secretary of Labor *must* issue citation and is *mandated* to include in such citation a proposed civil penalty of up to $1000 per violation. (b) Sec. 10(b) provides that where employer violates general duty *coupled with existence of serious danger,* or violates a reporting regulation not coupled with existence of serious danger, then Sec. of Labor *must* issue citation but the inclusion of a proposed civil penalty of up to $1000 per violation is *discretionary* with Secretary of Labor; and (c) Sec. 10(c) provides that where employer violates general requirement or any standard but serious danger is not present, Secretary of Labor must issue citation, but *no proposed civil penalty is attached.* However, any employer who *willfully* violates any specific standard is liable to a civil penalty of up to $10,000 per violation.	The Substitue bill provides that the Secretary of Labor shall issue a citation for *every* violation of the Act's requirements unless *de minimis* and must do so within 45 days of the occurrence of the violation; and no citation may be issued after the expiration of three months after the occurrence of a violation (sec. 10). A *willful* or *repeated* violation of the Act's requirements carries a possible civil penalty of up to $10,000 per violation. It is *mandatory* in the case of a serious violation that the citation include a civil penalty of up to $1,000 per violation; and ordinary violations carry a *discretionary* civil penalty in the same amount. A violation of a final order (or of a citation which has become a final order through an employer's failure to appeal a citation within 15 days of its issuance) carries a possible civil penalty of up to a $1,000 per violation. Each day of continued violation in this case is a separate offense.
4. Enforcement Procedures	4. Enforcement Procedures
Where Secretary of Labor issues a citation, employer has 15 days within which to contest it by requesting Secretary of Labor to hold Department of Labor administrative hearing. On the basis of the hearing, Secretary of Labor issues orders. If not timely contested citation becomes final order not subject to review. Secretary of Labor may enforce his orders in the Federal district courts where employers may also seek review, unless the order is one which became final because it was uncontested (sec. 11).	Establishes Occupational Safety and Health Appeals Commission, composed of 3 members appointed by the President. When Secretary of Labor issues citation, employer has 15 days within which to contest it to Secretary. If employer so contests, Secretary notifies Appeals Commission which shall afford employer with opportunity for hearing. Enforcement of Commission's orders, or review of those orders, would be in U.S. Courts of Appeals.
V. Criminal penalties	*V. Criminal penalties*
Forcibly impeding enforcement is made a felony; and it would be a misdemeanor to give advance notice of an employee who avails himself of the Act's protections (sec. 15)	Same, except: (1) there is *no criminal penalty for giving advance notice of an inspection.* Under the Substitute bill the problem of advance notice would be handled administratively by the Secretary of Labor (sec. 2(b)(10)); and the States would handle this the same way (sec. 18(c)(3)).; (2) the Substitute also provides civil penalty for discriminating against employees.
VI. Imminent danger	*VI. Imminent danger*
Permits Department of Labor inspector to issue on-the-spot shut-down orders effective for 5 days where in the inspector's judgment there is imminent danger to employees. Also permits Secretary of Labor to seek injunctive relief in Federal district courts (sec. 12).	Provides *only* for U.S. district court injunctive relief as remedy in imminent harm situations. Rule 65 of Federal Rules of Civil Procedure applies, except relief granted by the court without notice is effective for only 5 days. Inspector *must* notify both employer and employees that he is going recommend to the Secretary that relief be sought.
Damages. If Secretary of Labor *arbitrarily* or *capriciously* issues or fails to issue shut-down order, any person injured thereby, physically or financially, may bring action for damages in U.S. Ct. of Claims.	*Damages.* Damages like those permitted in the Committee bill are available to employees. But test, here, is "unreasonable" failure of Secretary of Labor to seek shut-down order (sec. 12(d)). Damages for employers are determined by the U.S. district court which sets a certain sum which may be recovered as damages by the employer. This method is modeled on Rules 65(c) of the Federal Rules of Civil Procedure (bonding provisions). Thus, the same court which grants the injunctive relief in imminent-danger situations would also determine amount of damages. (sec. 12(e)).
VII. Relationship to other laws administered by the Labor Department	*VII. Relationship to other laws administered by the Labor Department*
1. Walsh-Healey Act, Service Contract Act, and National Foundation on Arts and Humanities Act	1. Walsh-Healey Act, Service Contract Act, and National Foundation on Arts and Humanities Act
Provides that standards under these Acts are "replaced" as corresponding standards are promulgated under the Occupational Safety and Health Act (sec. 4).	Essentially the same (sec. 25(c)).
2. Construction Safety and Health Act (Public Law 91–54)	2. Construction Safety and Health Act (Public Law 91–54)
Treats the same way as it does Walsh-Healey Act, etc. (see above).	In keeping with the recent policy of Congress with respect to protecting construction workers, the Substitute bill would place all construction workers under the protection of the "Construction Safety Act" (Public Law 91–54). Therefore, the Substitute bill expressly provides that the Occupational Safety and Health Act would not apply to employers in construction work. The Substitute bill would also amend Public Law 91–54 to provide that all construction workers would come under the protection of standards developed by the Secretary of Labor under the procedures of Public Law 91–54. The Substitute bill amends Public Law 91–54 to permit the Secretary of Labor to bring cases of alleged violations of construction safety and health standards before the Occupational Safety and

COMPARATIVE ANALYSIS OF SIGNIFICANT PROVISIONS OF THE HOUSE COMMITTEE REPORTED OCCUPATIONAL SAFETY AND HEALTH BILL (H.R. 16785) AND THE SUBSTITUTE OCCUPATIONAL SAFETY AND HEALTH BILL—Continued

H.R. 16785—continued	SUBSTITUTE BILL—continued
VIII. Relationship to other Federal programs Act will not apply to working conditions of employees to whom another Federal agency has statutory authority to prescribe or enforce standards or regulations affecting occupational safety and health (sec. 22(b)).	*VIII. Relationship to other Federal Programs* Same, except added to Federal agency is *State agency* with authority to set standards under sec. 274 of the Atomic Energy Act (sec. 25(b)).
IX. Confidentiality of trade secrets Assures the confidentiality of trade secrets (sec. 14).	*IX. Confidentiality of trade secrets* Same (sec. 15).
X. Variations, Tolerances, and exemptions Variations, tolerances, and exemptions from the Act's provisions may be granted by the Secretary of Labor in order to avoid "serious impairment of the national defense" (sec. 16). The additional sanctions of contract debarment and cancellation now provided for under Public Law 91–54 would remain (sec. 25).	*X. Variations, Tolerances, and exemptions* Same, except the *Board*, not the Secretary of Labor, may grant the variations, tolerances and exemptions (sec. 16).
XI. Federal-State relationship 1. Where No Federal Standards Exist State standards would apply and be enforced where no Federal standards have been promulgated.	*XI. Federal-State relationship* 1. Where No Federal Standards Exist Same.
2. State Plans States which desire to set their own standards may submit a plan to the Secretary of Labor. If approved by him, the State standard and its enforcement by the State would control. However, the Secretary may apply the Federal law in whole or in part in the plan-approved State until he determines, not later than three years after the initial approval, that the plan is operating effectively. But in no event is the Secretary precluded from making inspections at any time to evaluate a State's operations under its plan. One of the several elements, or criteria, which the bill requires a State to include in its plan, is that the State will make all standards included in the plan applicable *to all public employees of the State and its political subdivisions* (sec. 17).	2. State Plans Same, except State-plan criterion with respect to making State standards applicable to public employees of both the State and local governments, is modified in the Substitute bill to take into account existing State laws whereunder some State governments do not have full control over the public employees working for autonomous local governments. Because of situations like this, a State government would not be in a position to agree that it will make its standards applicable to *all* public employees throughout the State (sec. 18).
3. Judicial Review of State Plans Judicial review may be obtained in the U.S. Court of Appeals in the circuit in which the State is located of the Secretary of Labor's decision to reject or withdraw approval of a State plan. Court's test would be whether the Secretary's action was arbitrary or capricious. (Sec. 17(g)).	3. Judicial Review of State Plans Same, (sec. 18(g)).
XII. Federal employee safety Provides safety and health programs to be established by agency heads; programs will be consistent with standards developed under the Act. Consultation with employee representatives is required. (Sec. 18).	*XII. Federal employee safety* Same, (sec. 19).
XIII. Research, employee training, safety-health personnel education, and grants to the States (a) Provides that the Secretary of HEW (directly or by grants or contracts) (1) conduct research in the field of occupational safety and health; (2) produce criteria to assist Secretary of Labor in developing standards; (3) conduct special studies in new problem areas, especially in health matters; (4) develop procedures under which employers *may be required under certain circumstances to measure exposure to toxic substances;* (5) make determinations regarding toxic substances. On the basis of these determinations employers will be required to prohibit employment which would involve exposure to noxious substances, unless appropriate labeling and other precautionary measures are employed. Also permits employee to absent himself from circumstances involving risk connected with toxic substances—without loss of regular compensation for the period of such absence; and (c) set up accident and health reporting systems for employers and for States. (Sec. 19.)	*XIII. Research, employee training, safety-health personnel education, and grants to the States* (a) Essentially the same, but with some differences, i.e., the Substitute Bill *does not have any provisions under which an employer could be required to measure exposure to toxic substances.* Instead, the Substitute bill has a provision authorizing funds to enable Secretary of Labor to purchase equipment which he deems necessary to measure exposure of employees to working conditions involving ill effects from exposure to toxic substances. (Sec. 9(h).) The provisions requiring labeling in toxic-substance environments are also different. Instead of the labeling provisions of the Committee reported bill, including those dealing with employees being absent from noxious working environments, the Substitute bill provides that standards promulgated under the Act shall prescribe the posting of such labels and warnings as are necessary to apprise employees of the nature of hazards and the means and methods of avoiding them. Thus, the Substitute bill would make all the Act's enforcement procedures and penalties which are applicable to standards generally, also applicable to those which include labeling requirements. (Sec. 6(m).)
(b) Requires Secretary of HEW to set up educational programs for safety-health personnel; authorizes Secretary of Labor to provide short-term training for safety-health personnel; requires Secretary of Labor to set up educational program for employers and employees concerning how to avoid accidents, etc. (sec. 20).	(b) Same.
(c) Also authorizes Secretary of Labor to make planning grants to the States (90% Federal participation) and also program grants (50% Federal participation).	(c) Same.
XIV. Economic assistance to small businesses No provision.	*XIV. Economic assistance to small businesses* Would amend the Small Business Act to permit loans to small businesses as are necessary and appropriate to assist them in meeting certain costs resulting from the enactment of the Occupational Safety and Health Act. (Sec. 22).
XV. Statistics No provisions comparable to those of substitute bill.	*XV. Statistics* Contains provisions to set up a full statistical program in response to one of the greatest needs in the field of occupational safety and health; that is, the lack of adequate statistical data to gage the nature and extent of job hazards. Program would include grants to the States; and the Federal share may be up to 50% of the State's total program cost.
XVI. Observance of religious beliefs No provision.	*XVI. Observance of religious beliefs* Provides that the act shall not be deemed to authorize or require medical examination, immunization, or treatment for those who object on religious grounds, except where such medical procedures are necessary for the protection of the health or safety of others.
XVII. Appropriation Such sums as may be necessary.	*XVII. Appropriation* Same.
XVIII. Effective date First day of the first month which begins more than 30 days after date of enactment.	*XVIII. Effective date* 120 days after date of enactment.

MINORITY VIEWS ON H.R. 16785

We had every confidence that in this session of Congress we would see the enactment of effective Federal legislation to bring about safe and more healthful working conditions in this country. That confidence was born of the fact of President Nixon's having recommended this legislation in three separate messages to Congress, including a special one devoted exclusively to the urgent and unique problems of job safety and health.

Our hope was sustained over the months by clear indications from majority members that while reasonable men might differ, any differences could be worked out so that we might achieve the goal of enacting a genuinely effective law to reduce job hazards. These indications of apparent willingness to overcome differences even led us to offer a completely new bill as a substitute for the Administration's original bill. And we were willing to reach further accord with the majority up until the final moments before the Committee reported out its bill.

Unfortunately, our efforts were in vain. In retrospect, the majority's willingness to work out disputed points proved to be illusory. In sum, the Committee had rejected the original Administration bill which had been carefully drafted to take account of the harsh but well deserved lessons learned from the 90th Congress' experience with occupational safety and health legislation. The Committee then rejected the Administration's substitute; and finally, spurning even our eleventh hour endeavors to produce a viable piece of legislation, the Committee reported out a bill which we had to vote against.

The measure as reported by the Committee is unacceptable because in rejecting the concept of an independent Board to set standards, the bill would create a monopoly of functions in the Secretary of Labor. Such a monopoly not only ignores the element of fairness to those required to comply with the Act, but also fails to resolve the jurisdictional division between HEW's responsibility for health and the Labor Department's for safety. In addition, the Committee bill does not overcome the widespread objection to permitting an inspector to close down a plant in imminent-danger situations. We regard this as a serious shortcoming. Lastly, the Committee bill contains a sweeping general duty requirement that employers maintain safe and healthful working conditions. This broad mandate is grossly unfair to employers who may be penalized for situations which they have no way of knowing are in violation of the Act.

I. GENERAL DIFFERENCES

The single most important difference between the Committee bill and the substitute is where and how, each would place the prime responsibility for providing safe and healthful working conditions.

The Committee bill follows the stock approach of placing all responsibility in the Secretary of Labor. He would set standards through a time-consuming and complicated procedure involving *ad hoc* advisory committees; he would enforce the standards, prosecute violations before Labor Department hearing examiners; and he again, would be the one to issue corrective orders along with assessing civil penalties.

The substitute bill, on the other hand, refocuses responsibility for job safety and health by distributing these functions. In an effort to stress the importance and nonpartisan nature of occupational safety and health, the substitute bill would create a new, top-echelon independent National Occupational Safety and Health Board to set standards composed of five members who would be appointed by the President solely because they are high-calibre professionals in the field of occupational safety and health. The members would serve at the pleasure of the President so that the independent Board does not become the captive of any special interest and remains responsible to the President.

The fact that the proposed legislation is concerned with working men and women is not sufficient reason for placing the standard-setting function under the Department of Labor. The Federal Mediation and Conciliation Service, the National Mediation Board, and the National Labor Relations Board, for example, are wholly concerned with matters pertaining to labor—nevertheless, they are entirely independent of the Department of Labor. Thus, there is ample statutory precedent for our proposed independent Safety and Health Board.

But even more significant is this. The members of the Board will not be appointed because they are Democrats or Republicans, pro-labor or pro-management, an approach which unfortunately has too often been followed in the making of appointments to Federal positions. The problems to be dealt with are not political, they are not primarily economic, they do not involve issues where there are deep differences concerning policy. To the contrary, these problems are almost entirely technical and technological. The appointment of an independent Board whose members must be highly competent professional experts in a field where the subject matter is almost wholly objective and susceptible to genuinely scientific and technical analysis, judgment, and decision, would inspire the utmost confidence in every segment of the American public.

And finally, the creation of a Board of this kind would more than meet the recommendations for a national advisory commission or for such a Board itself, which were made by the leading professional organizations in the safety and health fields, such as the National Safety Council, the American Industrial Hygiene Association, the American Academy of Occupational Medicine, the Industrial Medical Association, the American Society of Safety Engineers, and several of the State health or industrial safety agencies which testified in the hearings held during the present or immediately preceding Congress.

Aimed at providing both fair and uncomplicated procedures, the substitute bill would thus have the Board set standards, simply using the familiar procedures under the Administrative Procedure Act (APA). The Secretary of Labor would conduct inspections, and in violation cases, he would seek enforcement in the Safety and Health Commission created by the substitute and United States appellate courts in accordance with procedures which would provide appropriate equity remedies and assess civil penalties.

II. SPECIFIC SIGNIFICANT DIFFERENCES

1. Standards

The Administration's substitute bill provides very simply that the Board set standards according to the formal procedures of the APA. This means that a full hearing will be held so that a wide variety of views can be aired; and standards will be based on substantial evidence with an opportunity to cross-examine.

However, the substitute bill also recognizes that out-of-the-ordinary situations will arise in which the Board has to act quickly and should not have to go through a hearing before it can respond to these situations. Therefore, section 6(b) of the substitute bill provides that where it is *essential* to protect the health or safety of employees, national consensus standards or established Federal standards can go into effect *immediately* on publication in the Federal Register, and they will remain in effect until later superseded by standards promulgated through formal APA hearings.

Also, section 6(i) of the substitute bill provides that where employees are exposed to *grave* danger from exposure either to toxic substances or to hazards resulting from new processes, then the Board may issue new "emergency temporary standards". These too would go into effect immediately on publication but would remain in effect until superseded by standards promulgated pursuant to formal APA proceedings. The substitute requires the Board to start formal APA proceedings by publishing the temporary standard as the notice of proposed rule making, as soon as the emergency temporary standards are published. The Board is required to promulgate such standard within six months after the publication of the temporary standard.

The substitute bill provides that where an applicable national consensus standard, or an established Federal standard exists, then the Board would begin with those standards as the proposed rules for the hearings used to set permanent standards. If the standard as finally promulgated by the Board differs from the original proposed rule, then the Board must state its reasons for departing from the original.

The Committee bill would also set permanent standards through formal APA hearings, but before these hearings even begin, it would be necessary to go through an intricate maze of procedures involving assorted advisory committees. Whenever the Secretary wanted to set a standard under the Committee bill, he would have to appoint an advisory committee. This advisory committee has up to nine months to submit its recommendations to the Secretary and the Secretary may not begin any hearings until he has afforded the advisory committee the prescribed time to submit its recommendations. Although the Secretary may shorten this period, the Committee bill also provides that he may lengthen it; but there is an outside time limit of one year and three months.

After this excessive length of time, the Secretary has an additional four-month time period before he is required to hold a formal hearing on the advisory committee's recommendations.

If the committee does not submit recommendations on time (bearing in mind this can be up to well over a year), the Secretary may wait up to four more months before he has to schedule a hearing; the hearing begins 30 days after scheduling.

By simple arithmetic, we compute that under the Committee's bill, the Secretary of Labor might well have to wait close to two years before a formal hearing begins. This means that it may take him all that time just to catch up to the starting point of the Board's standard-setting procedure under the substitute bill.

It is understandable that the Committee bill would have to provide these excessive preliminary time lags. After all, it is going to take time to set up an array of *ad hoc* committees and more time still for each of them to undertake and complete their required assignments before they will be in any position to make their recommendations. However, no such time periods are needed under the substitute bill since a full-time, top professional National Board would be continually involved in standards-development and therefore needs only to commence a formal APA hearing when it seeks to set permanent standards.

2. Enforcement

The Committee's bill's enforcement provisions are as complicated as its standard-setting procedures, but the enforcement provisions present uniquely serious problems because due process is a matter of grave personal concern where enforcement is involved.

Under the Committee bill, the Secretary of Labor conducts inspections, holds hearings before Labor Department hearing examiners, and it is also the Labor Department which issues corrective orders and assesses civil penalties.

Unlike the Committee bill the substitute provides for an *effective* and *fair* method of enforcement. The Secretary of Labor would continue to be responsible for making inspections and investigations. However, a special permanent three-member administrative Occupational Safety and Health Appeals Commission would be appointed to conduct formal hearings on alleged violations which were discovered by the Secretary; and the Commission would issue any necessary corrective orders, as well as assess penalties. The Commission would utilize hearing examiners whose decisions would become final unless an appeal is made to the Commission.

3. General safety and health requirement

We strongly object to the Committee bill's sweeping general requirement that employers furnish safe and healthful working conditions. This was one of the first provisions which this Committee struck when it reported an occupational safety and health bill in the 90th Congress. Why it has not done so again is beyond our comprehension. The argument used in support of the Committee bill's general requirement is that a similar provision is found in the Walsh-Healey Act, the Service Contract Act, the Maritime Safety Act, and in the laws of some 35 States. This argument does not persuade us.

The Walsh-Healey and Service Contract Acts deal with the duties of those who contract with the Government. If a person freely contracts with the Government, then he assumes the responsibility for maintaining safe and sanitary working conditions as provided for in those two-procurement-related statutes. While the language of the requirement in those two laws may be general, its application could hardly be described as "general" since coverage under those Acts extends only to those circumstances to which the supply and service contracts themselves apply. Moreover, we understand that the general safety and health requirements of those two Acts have never been enforced in the absence of specified standards.

In the case of the Maritime Safety Act, the term "general" safety and health requirement is also a misnomer. The Maritime Safety Act applies to a single industry, s by force of circumstances, that Act does not contain a so-called general requirement like the one in the Committee bill which would apply to the whole spectrum of American industry.

States also do not have general safety and health requirements in the same sense as the Committee bill does. Not only do none of the States provide the wide and varied coverage of the Committee bill, but many State laws apply only to limited areas of activity such as boiler and elevator safety.

The objection to the very broad general safety and health requirement is not, of course, that there are no valid arguments to justify it. The offensive feature of such a provision is that it is essentially unfair to employers to require compliance with a vague mandate applied to highly complex industrial circumstances. Under such a mandate, the employer will simply have no way of knowing whether he is complying with the law or not, nor will the inspector have any concrete criteria, either statutory or administrative, to guide him in finding a violation.

On the one hand, the Committee bill recognizes this industrial complexity by providing for specific standards to be developed through the use of any number of advisory committees and public hearings. But the Committee does a turnabout, and requires the employer to follow a mandate which is almost as broad as "do good and avoid evil." We seriously doubt that the Committee bill could be enforced on the basis of this broad requirement; but if it could, we would be faced with the serious problem that there would be no incentive to develop any standards where such a broad mandate exists.

We recognize, however, that specific standards could not be fashioned to cover every conceivable situation. We would be remiss in our duty, if any worker were killed or seriously injured on the job merely because there was no particular standard applicable to a dangerous situation which was apparent to an employer. Hence, in addition to requiring employers to comply with the specific standards promulgated by the Board, and applicable to them, the substitute bill also requires each covered employer to furnish his employees employment and a place of employment which are free from any hazards which are readily apparent and are causing or are likely to cause death or serious physical harm to his employees.

III. CONCLUSION

Despite our criticism of various provisions of the Committee bill, we do not wish to convey the impression that we object to the bill in its entirety; quite the contrary. Many provisions of the Committee bill are in large part, satisfactory and comparable provisions are found in our substitute. Some examples are the State grants section, the provisions for State participation through the submission of plans, the carefully circumscribed employer-exemption provisions, and the Federal employee safety program. A few provisions, in addition to those discussed herein, are more questionable. Several other provisions of the Committee bill would be acceptable if they were modified.

However, we regard the establishment of an independent Board to promulgate standards and due process as essential provisions which cannot be omitted from any bill which genuinely purports to have the best interests of employees and employers as the basis for its enactment. Hence, we intend to offer our own proposal, which was rejected by the Committee's majority, as a substitute for H.R. 16785 as reported by the Committee.

TAKE PRIDE IN AMERICA

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. MILLER) is recognized for 5 minutes.

Mr. MILLER of Ohio. Mr. Speaker, today we should take note of America's great accomplishments and in so doing renew our faith and confidence in ourselves as individuals and as a nation. In 1952, 6.5 million people or 4 percent of the U.S. population owned shares of stock. In 1969, the number of shareowners increased to 26.4 million or 13 percent of our population.

PANAMA CANAL: HEARINGS BEFORE HOUSE SUBCOMMITTEE ON INTER-AMERICAN AFFAIRS, AUGUST 3, 1970

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. FLOOD) is recognized for 15 minutes.

Mr. FLOOD. Mr. Speaker, in previous addresses of mine on the interoceanic canal problem—House Document No. 474, 89th Congress—I have prescribed the Caribbean as our "fourth front" in which the Panama Canal is the "key target" for the Communist conquest of that strategic area, long ago described by Admiral Mahan as the "Mediterranean of the Americas."

Most appropriately, the Subcommittee on Inter-American Affairs of the House Committee on Foreign Affairs, of which my distinguished colleague from Florida (Mr. FASCELL) is chairman, between July 8 and August 3, 1970, conducted highly significant hearings on "Cuba and the Caribbean," in which various officials having special knowledge of their subjects testified.

Attached to my prepared statement was a "Memorial to the Congress" sponsored by the Committee for Continued U.S. Control of the Panama Canal bearing the signatures of eminent leaders in various parts of the Nation to which special attention is invited.

In the colloquies following my testimony, three main points were: U.S. sovereignty over the Canal Zone, the Panama Railroad, and the sea-level lock controversy.

As to the sovereignty question, the real issue is not United States versus Panamanian control, but continued U.S. sovereignty versus Communist control, and this is the question that should be debated in the Congress.

With regard to the Panama Railroad, I would stress that the overwhelming reason for that railroad is to handle transisthmian traffic in event of interruption to ship transits that could be caused by major landslides. In such event, this railroad would become an indispensable transcontinental link overnight with a great volume of traffic.

The third point is the moth-eaten proposal for a sea-level canal, which project hinges on the surrender of U.S. sovereignty over the entire Canal Zone to Panama.

To all realistic students of Panama Canal history and problems with whom I have discussed these matters, including many with direct responsibilities in the maintenance, operation, sanitation, protection, and military defense of the canal, the surrender of sovereignty as proposed in the discredited 1967 treaties is absolutely unthinkable.

In this connection, I would invite the attention of the Congress to four appointments that relate to Panama Canal policy questions, as follows:

Hon. Robert B. Anderson, Chairman of the Atlantic-Pacific Interoceanic Canal Study Commission.

Hon. John N. Irwin II, as Under Secretary of State.

Hon. Robert M. Sayre, U.S. Ambassador to Panama.

Hon. Daniel W. Hofgren, a member of the Panama diplomatic negotiating team.

Of the above officials, the first three were directly connected with the formulation of, or negotiation for, the 1967 surrender treaties. The last is a 33-year White House staff member with no Panama Canal or diplomatic experience, who has been given the task of treaty negotiation under Ambassador Anderson. It is

difficult to accept such a series of appointments as mere happenstances. In any event, they present a situation to which the Congress and the Nation should be alert.

For the sake of emphasis, I would state again that, in view of the extensive clarifications already made of the interoceanic canal problem, there are only two issues:

First, the question of retaining full U.S. sovereignty over the Canal Zone and Panama.

Second, the major modernization of the existing Panama Canal.

In order that the Congress and the Nation may be adequately informed in the premises, I quote as parts of my remarks my statement before the subcommittee at the indicated hearings, and the ably prepared statement of my distinguished colleague, the gentleman from Missouri (Mr. HALL); also the texts of the identical Panama Canal sovereignty resolutions now before the House and the identical bills for the Panama Canal Modernization Act that are pending in both House and Senate.

The material follows:

CUBA AND THE CARIBBEAN

HOUSE OF REPRESENTATIVES, COMMITTEE ON FOREIGN AFFAIRS, SUBCOMMITTEE ON INTER-AMERICAN AFFAIRS,

Washington, D.C., Monday, August 3, 1970.

The Subcommittee on Inter-American Affairs met at 2:30 p.m., in room H-227, U.S. Capitol, Hon. Dante B. Fascell (chairman of the subcommittee) presiding.

Mr. FASCELL. The subcommittee will please come to order.

We meet this afternoon to continue our hearings on Cuba and the Caribbean.

During the past 4 weeks, the subcommittee has inquired into many issues relating to this general topic. In the process, we have heard testimony from public and private witnesses, including high-ranking officials of the Departments of State and Defense and military commanders responsible for security operations in the Caribbean region.

These hearings have affirmed my deep conviction that the Caribbean region is of vital strategic importance to the United States, and that several factors introduced recently into that area have a direct bearing on our national and international security posture.

Among these are intrusion of Soviet naval and air units into the Caribbean; the worsening economic situation in Cuba, the Black Power movement on some of the islands; and the growing potential for violence bred, in part, by the unfavorable social and economic conditions which prevail in various parts of this region.

All of these things have a bearing on the future status of the major waterway of this region—the Panama Canal.

It is for this reason that the subcommittee invited Gen. George Mather, Commander in Chief, U.S. Southern Command, and Maj. Gen. Walter P. Leber, Governor of the Canal Zone, to meet with us. They appeared before the subcommittee on July 10.

Today we are pleased to welcome a distinguished colleague of ours, the Honorable Daniel J. Flood, Representative from Pennsylvania, who will address himself to these issues also.

I know that Congressman Flood does not need an introduction in this forum. He has broad knowledge on issues relating to the Panama Canal, and his leadership is recognized in the Congress and elsewhere. We are happy to have him here with us today, to share his views with the subcommittee.

STATEMENT BY HON. DANIEL J. FLOOD, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF PENNSYLVANIA

Mr. FLOOD. Thank you very much, Mr. Chairman.

It is a special privilege and interest for me to appear before this subcommittee, because, as you know, I first came to Congress in 1945, when I had the high honor and the great privilege of serving on my first committee, the Committee on Foreign Affairs of the House.

The great, beloved, and revered Sol Bloom of New York was then chairman, if anybody can remember back that far. I was assigned by interest to this committee, which was then the Subcommittee on the Western Hemisphere, but it is the same committee, and the same purpose then as now.

Now, the statement that you made identifying the importance of the Panama Canal with the whole subject that you have in mind, of course, couldn't be more pointed or more exact. The interoceanic canal problem in its overall aspects, is an immensely complicated subject, believe me; yet if it is reduced to its central issue, it is relatively simple, if you can believe that.

Whenever the Canal question comes up for national attention, two subjects always develop. First, the site, and second, the type and kind of canal.

Later on, as you know, when after the war we organized the Department of Defense, I was assigned and still am a member of the Appropriations Subcommittee for the Department of Defense.

In addition, you know, I was raised in St. Augustine, in Florida and my grandfather had a great interest in the Caribbean, and in the Isthmian area. So since I was a very young child, I have been in and out of this problem.

After a memorable struggle in 1902 known as the "battle of the routes," the President and the Congress, in the Spooner Act of that year, decided in favor of the Panama site and authorized the acquisition by treaty of the perpetual control of the Panama Canal with the Canal Zone to serve as its protective frame.

Now I have selected all those phrases with great care, after wondering about them for 10 years. Such control of the Zone was the absolutely necessary prerequisite demanded by the Congress and the Nation before assuming the large financial obligation involved in the construction and defense of the Panama Canal.

Later, in 1906, the President and the Congress, after thorough study and scorching debate, made a second great decision in favor of the existing high level lake and lock type canal, which was then constructed. History has established the wisdom of that determination, economically, operationally, technically and environmentally.

Today, the Panama Canal is in another era of decision. There are two major issues:

First, the transcendent question of safeguarding our indispensable sovereignty and ownership of the Canal Zone and Panama Canal; and

Second, the problem of the major modernization of the Canal. Mr. Chairman, all other interoceanic canal questions, however important, I suggest are irrelevant and should not be allowed to confuse these two major issues. Now there are a lot of them. They are a can of worms. But these are the two major issues. I can go on, like Tennyson's brook, about the related subjects, but I think you are concerned about these two major problems.

CONTROL OF THE PANAMA CANAL

As to sovereign control, it must be emphasized that, because of its strategic position as the crossroads of the Western Hemisphere, and the jugular vein of hemispheric defense as far as this Nation is concerned, the Isthmus of Panama has always been, and always will be, an object for predatory designs. Its loss to a potential enemy power is unthinkable, as recognized by the more than 100 Members of the House who have sponsored identical resolutions opposing any surrender at Panama, and I am advised there will be many, many more—in my opinion, a majority from both sides of the aisle.

MODERNIZATION OF THE PANAMA CANAL

The problem of modernization depends upon the reaffirmation by the Congress of our national policy as to Canal Zone sovereignty and Panama Canal control. The best way, in fact the only way to effect such a policy, is to maintain our present treaty rights and modernize the existing Panama Canal according to the well-known Terminal Lake-Third Locks plan will add 13,400—in the Panama Canal organization during World War II and eventually approved by President Franklin D. Roosevelt as a post-war project.

This plan, it should be especially noted, calls for a major increase of capacity and operational improvement of the existing canal and by all means, bear this in mind—does not require the negotiation of a new treaty with Panama. This is a paramount consideration, you can be assured.

The estimated maximum capacity of the existing canal is 26,800 vessels. The proposal that is now being made of the Terminal Lake-Third Locks plan, will add 13,400—making a total capacity, annually, of 40,200. There is no immediate need we are aware of in the immediate future, for this century, that would call for any more. If there are any other figures, I and my associates have never heard of them.

Many able and well-informed engineers, navigators, geologists, economists, biologists, nuclear physicists, defense and other experts strongly support the plan as offering the best solution of the canal problem. Such modernization should provide a capacity of, certainly 40,000 vessels a year at a minimum—at a minimum—including vessels of larger size, and there are identical bills to provide for it introduced in both the House and the Senate.

Moreover, previous Governors of the Canal Zone have approved the plan in principle and the present Governor has, as you have just mentioned, Mr. Chairman, addressed your committee on July 10, and he has expressed his belief that it is in the interest of the United States that the existing Canal be, and I quote the present Governor, "operated, maintained, defended, and augmented as necessary." (End of his quotation.)

Now, in official discussions of modernization plans, there is still mention of the 1939 Third Locks project along with the Terminal Lake proposal. I would like to clear this up. I have often heard this mentioned. Now there is confusion here.

The original Third Locks project that I mentioned to you, about which you have heard, does not provide for the elimination of the Pedro Miguel Locks and would perpetuate and compound the bottleneck at these locks. Any plan that fails to eliminate them is unworthy of any serious attention whatsoever and not be allowed to confuse.

At this point, it is well to record that the total net investment of the taxpayers of our country in the Panama Canal enterprise, including defense, from 1904 through June 30, 1968, was more than $5 billion. This sum, if converted into 1970 dollars would be, as you know, a far greater sum.

PROPOSAL FOR SEA LEVEL CANAL

In these general connections, it is important to remember that the much propagandized and costly "sea level" proposal hinges on—it hinges, this much publicized ditch—on ceding U.S. sovereignty over the Canal Zone and the Canal to Panama before constructing any new canal; and that a new canal, if constructed at the American tax-

payers' expense, would also be given to Panama without the least compensation.

It is hard for me to conceive of anybody dreaming up a thing like this, but it always raises its head. We thought we had it killed for several years, but it is a hydraheaded monster. It is back again. It is hard to believe this.

The chairman of the current Atlantic-Pacific Interoceanic Canal Study Commission, the Honorable Robert B. Anderson, a leading sea-level project advocate, was the chief negotiator for the discredited 1967 treaties.

Now listen to this: Notwithstanding this fact, he still heads our diplomatic team now reopening treaty negotiations with Panama. This is like sending the devil to investigate hell.

Throughout their treaty negotiations the members of our diplomatic team, and this should concern your committee personally, have steadily and studiedly and completely ignored the provisions of article IV, section 3, clause 2 of the U.S. Constitution that vests the power to dispose of territory and other property of the United States in the Congress—that is, the House and the Senate—and not in the treatymaking power of our Government—the President and the Senate.

So where better should I be today, than before a subcommittee of the House charged with responsibility in the field of Foreign Affairs?

In addition, our negotiators have also ignored the responsibilities of the United States under the Hay-Pauncefote Treaty and the rights of Colombia under the Thomson-Urrutia Treaty. Under the first, the United States is obligated to manage the Canal and under the second it has granted to Colombia important rights as regards both the Panama Canal and the Panama Railroad.

As to these, shipping interests in Great Britain and Japan have already made known their opposition to the proposed surrender at Panama, and Colombia has announced that it will defend its rights. In fact, the Colombian Government for many months has been collecting documentary material in the United States concerning this very canal question, which is most significant.

Now the foregoing facts together make favorable action on the pending sovereignty resolutions, I suggest, Mr. Chairman, a matter of the greatest importance. Time is of the essence as far as maintaining the position of the House under the Constitution is concerned. Time is of the essence.

In the interest of avoiding a possible misinterpretation of the resolutions, I would suggest changing the term—and I quote—"Panama Canal Zone" in the first whereas clause to "Canal Zone and Panama Canal", and the words "said canal" in line 4 of the resolve on page 3 of the resolution to "said Canal Zone and Panama Canal," primarily for clarification, out of an abundance of caution. Mr. Chairman; I have been through this before.

RAIL LINK RETAINED ACROSS ZONE

An example of the application of the wise Constitutional provision previously cited is the 1955 treaty with Panama, which authorized conveyance to that country of valuable U.S. property in Panama, including the Panama Railroad terminal yards and passenger stations in Panama City and Colon, subject to the enactment of legislation by the Congress—not the President and the Senate, but by the Congress—the House and the Senate.

It is appropriate to state that the House—and I had some small part in its action, you will recall—stepped into that situation and the House rescued the main line of that railroad from complete liquidation. Had it not been for such action by this House, this vital rail link, which would be so urgently needed in the event of interruption of transit because of possible major slides in Gaillard Cut, would have been abandoned.

Now in regard to a sea level project, either in the Canal Zone or Panama, that ancient and moth-eaten idea would involve a new treaty with a huge indemnity—you can imagine that—and a greatly increased annuity—you can be doubly sure of that.

TERMINAL LAKE-THIRD LOCKS CANAL MODERNIZATION PROJECT

The 1939 Third Locks Project, authorized primarily for defense reasons, at a cost of $277 million, did not require a new treaty. Construction on it started in 1940 and was suspended in May of 1942, with a total expenditure of $76,357,405, largely on huge lock site excavations at Gatun and Miraflores, which are still usable.

The current enlargement of Gaillard Cut, now nearing completion—and I recently saw it—was estimated to cost $81,257,097. Now together, Mr. Chairman, these two projects total more than $157 million toward the major modernization of the existing Panama Canal, which is much too large an expenditure to be swept under the rug—even by my Committee on Appropriations.

The solution of the problem of increased capacity and operational improvement of the Canal was developed as a result of World War II experience in the previously mentioned Terminal Lake-Third Locks plan for the existing canal. This major modernization can be accomplished at relatively low cost and, like the Third Locks Project, does not involve the negotiation of a new treaty with Panama. And that you must avoid like the plague—and they have that there, too.

CANAL ZONE AS A POLITICAL REFUGE

An important angle in the Panama Canal situation is that the Canal Zone has served many times as a haven of refuge for Panamanian leaders seeking to escape assassination by their political enemies in a very unstable political entity, the Republic of Panama.

The most recent example of the use of the Zone as an asylum was on June 8, 1970, when three colonels and a sergeant of the Panamanian National Guard escaped from prison in Panama City and found safety in the Zone. It is an island of security in a land of endemic revolution, endless political turmoil, technological incoherence, and which today, as is generally the case, is without a constitutional government.

Another case of such use of the Zone territory was by Senora Torrijos, wife of Brig. Gen. Omar Torrijos, on December 15, 1969, when she fled to the Canal Zone during an abortive revolt against her husband, the caudillo of Panama. Never a dull minute down there.

Mr. Chairman, I can't stress too strongly that were it not for the Canal Zone under U.S. sovereign control, some of the most brilliant leaders in Panama would have been assassinated. If the United States surrenders that Zone to Panama, as contemplated in the proposed new treaties, the Panama Canal would become a political pawn for the worst type of Panamanian politicians, and the Canal Zone the scene of guerrilla warfare and its inevitable cruelty and tragedy.

STRATEGIC IMPORTANCE OF PANAMA CANAL

For many years, the Caribbean has been recognized as the Mediterranean of the Americas. As far back as 1960, in an address to the House, I described it as our fourth front and the Panama Canal as the key target for the Communist conquest of that strategic basin. Subsequent events since then have justified my worst fears.

The surrender by the United States of the Canal Zone and Canal would inevitably result in a Communist takeover of Panama, as occurred in Cuba, which would include the Canal itself. With our country having given up its legal rights in the premises, it would be powerless to oppose.

Moreover, within the last year Soviet missile-capable submarines and surface vessels stationed in Cuba have been sighted in our fourth front. For these and many other reasons, some of them related to the security of the Panama Canal, the Southern Command, with its headquarters in the Canal Zone, should be maintained as essential to hemispheric security and not reduced in importance.

Fortunately for the United States, respected leaders in various parts of the Nation have studied the Canal problem and recently expressed their views in a "Memorial to the Congress." I would like consent to attach a copy of that memorial, which we have sent to your committee already, as part of an appendix to my statement.

Mr. FASCELL. Without objection, it is so ordered.

Mr. FLOOD. For these and other reasons, some of them related to the security of the Canal, this command I consider of prime importance. It is the only independent command identified with this problem in the entire Western Hemisphere.

Finally, I would summarize some of the principal lessons from my many years of study of this Panama Canal question:

We have a fine canal now; it is approaching capacity saturation, but not obsolescence.

We know how to maintain and operate it.

We know how to increase its capacity and operational efficiency, as demonstrated by years of experience.

We have a workable treaty with Panama although partly abrogated through ill-advised surrenders.

We have defended the lives of our citizens in the Canal Zone and the Canal itself by the use of our authority.

We have now reached the point where, if we do not make known our determination to hold onto this priceless asset of the United States, we may lose it to Soviet power, as happened at the Suez Canal, and one of their great targets, from the early days of Communist writing, is the control of key maritime communications: the Kiel, Suez and Panama Canals; the Straits of Gibraltar and Malacca; and the Strategic Caribbean and Mediterranean Seas. They have got their hands on them all.

Accordingly, Mr. Chairman, I urge prompt action by this subcommittee on the pending Panama Canal sovereignty resolutions and the printing of the 1967 hearings along with the present hearings, or as an appendix to the present hearings.

Such action should enable early adoption by the House of the resolutions and open the way for the long overdue major modernization of the Panama Canal, which we want done. Moreover, such action by the House would serve notice on the executive branch of the determination of the people of the United States to retain full control of both the Canal Zone and Panama Canal.

If there can be any reasonable doubt, a scintilla of doubt in any mind, in a referendum, nationwide, the people of this country would vote uncountably to do what I suggest.

With such resolutions adopted by the House, should be proposed treaties be sent to the Senate for ratification, some of my colleagues on both sides of the aisle have asked me to lead a march—there will be 200 of them, four abreast—from the House to Mr. Fulbright's committee, and ask to be heard.

Thank you, sir.

(The document referred to above, "Memorial to the Congress," follows:)

MEMORIAL TO THE CONGRESS

COMMITTEE FOR CONTINUED U.S. CONTROL OF THE PANAMA CANAL—1970 WASHINGTON, D.C.

Honorable Members of the Congress of the United States, the undersigned, who have studied various aspects of interoceanic canal history and problems, wish to express our views:

1. The construction by the United States of the Panama Canal (1904–1914) was one of the greatest works of man. Undertaken as a long-range commitment by the United States in fulfillment of solemn treaty obligations (Hay-Pauncefote Treaty of 1901) as a "mandate for civilization" in an area notorious as the pest hole of the world and as a land of endemic revolution, endless intrigue and governmental instability (Flood, "Panama: Land of Endemic Revolution . . ." Congressional Record, vol. 115, pt. 17, pp. 22845–22848), the task was accomplished in spite of physical and health conditions that seemed insuperable. Its subsequent management and operation on terms of "entire quality" with tolls that are "just and equitable" have won the praise of the world, particularly countries that use the Canal.

2. Full sovereign rights, power and authority of the United States over the Canal Zone territory and Canal were acquired by treaty grant from Panama (Hay-Bunau-Varilla Treaty of 1903), all privately owned land and property in the Zone were purchased from individual owners, and Colombia, the sovereign of the Isthmus before Panama's independence, has recognized the title to the Panama Canal and Railroad as vested "entirely and absolutely" in the United States (Thomson-Urrutia Treaty of 1914–22).

3. The gross total investment of our country in the Panama Canal enterprise, including its defense, from 1904 through June 30, 1968, was $6,368,009,000; recoveries during the same period were $1,359,931,421, making a total net investment by the taxpayers of the United States of more than $5,000,000,000. Except for the grant by Panama of full sovereign powers over the Zone territory, our Government would never have assumed the grave responsibilities involved in the construction of the Canal and its later operations, maintenance, sanitation, protection and defense.

4. In 1939, prior to the start of World War Two, the Congress authorized at a cost not to exceed $277,000,000, the construction of a third set of locks known as the Third Locks Project, then hailed as "the largest single current engineering work in the world." This Project was suspended in May 1942 because of more urgent war needs, and the total expenditures thereon were $76,357,405, mostly on lock site excavations at Gatun and Miraflores, which are still usable. Fortunately, an excavation was started at Pedro Miguel. The current program for the enlargement of Gaillard Cut is scheduled to be completed in 1970 at an estimated cost of $81,257,097. These two projects together represent an expenditure of more than $157,000,000 toward the major modernization of the existing Panama Canal.

5. As the result of canal operations during the crucial period of World War Two, there was developed in the Panama Canal organization the first comprehensive proposal for the major operational improvement and increase of capacity of the Canal as derived from actual marine experience, known as the Terminal Lake—Third Locks Plan. This conception includes provision for the—

(1) Elimination of the bottleneck Pedro Miguel Locks

(2) Consolidation of all Pacific Locks South of Miraflores

(3) Raising the Gatun Lake water level to its optimum height (about 92')

(4) Construction of one set of larger locks

(5) Creation at the Pacific end of the Canal of a summit-level terminal lake anchorage for use as a traffic reservoir to correspond with the layout at the Atlantic end, to permit uninterrupted operation of the Pacific locks during fog periods.

6. Competent, experienced engineers have officially reported that "all engineering considerations which are associated with the plan are favorable to it." Moreover, such solution:

(1) Enables the maximum utilization of all work so far accomplished.

(2) Avoids the danger of disastrous slides.

(3) Provides the best operational canal practicable of achievement with the certainty of success.

(4) Preserves and increases the existing economy of Panama.

(5) Avoids inevitable demands for damages that would be involved in a Canal Zone sea level project.

(6) Averts the danger of a potential biological catastrophe with international repercussions that would be caused by removing the fresh water barrier between the Oceans.

(7) Can be constructed at "comparatively low cost" without the necessity for negotiating a new canal treaty with Panama.

7. All of these facts are paramount considerations from both U.S. national and international viewpoints and cannot be ignored, especially the diplomatic and treaty angles. In connection with the latter, it should be noted that the original Third Locks Project, being only a modification of the existing Canal, and wholly within the Canal Zone, did not require a new treaty with Panama. Nor, as previously stated, would the Terminal Lake-Third Locks Plan require a new treaty.

8. In contrast, the persistently advocated and strenuously propagandized Sea-Level Project at Panama, initially estimated in 1960 to cost $2,368,500,000, exclusive of indemnity to Panama, has long been a "hardy perennial," and according to former Governor of the Panama Canal, Jay J. Morrow, it seems that no matter how often the impossibility of realizing any such proposal within practicable limits of cost and time is demonstrated, there will always be someone to argue for it; and this, despite its engineering impracticability. Moreover, any sea-level project, whether in the U.S. Canal Zone territory or elsewhere, will require a new treaty or treaties with the countries involved in order to fix the specific conditions for its construction; and this would involve a huge indemnity and a greatly increased annuity that would have to be added to the cost of construction and reflected in tolls, or be wholly borne by the United States taxpayers.

9. Starting with the 1936–39 Treaty with Panama, there has been a sustained erosion of United States rights, powers and authority on the Isthmus, culminating in the completion in 1967 of negotiations for three proposed new canal treaties that would:

(1) Surrender United States sovereignty over the Canal Zone to Panama;

(2) Make that weak, technologically primitive and unstable country a partner in the management and defense of the Canal;

(3) Ultimately give to Panama not only the existing Canal, but also any new one constructed in Panama to replace it, all without any compensation whatever and all in derogation of Article 17, Section 3, Clause 2 of the U.S. Constitution. This provision vests the power to dispose of territory and other property of the United States in the entire Congress (Senate and House) and not in the treaty-making power of our Government (President and Senate).

10. It is clear from the conduct of our Panama Canal policy over many years that policymaking elements within the Department of State have been, and are yet engaged in efforts which will have the effect of diluting or even repudiating entirely the sovereign rights, power and authority of the United States with respect to the Canal end of dissipating the vast investment of the United States in the Canal Zone project. Such actions would eventually and inevitably permit the domination of this strategic waterway by a potentially hostile power that now indirectly controls the Suez Canal. That canal, under such domination, ceased to operate in 1967 with vast consequences of evil to world shipping.

11. Extensive debates in the Congress over the past decade have clarified and narrowed the key canal issues to the following:

(1) Retention by the United States of its undiluted and indispensable sovereign rights, power and authority over the Canal Zone territory and Canal, and

(2) The major modernization of the existing Panama Canal.

Unfortunately these efforts have been complicated by the agitation of Panamanian extremists, aided and abetted by irresponsible elements in the United States which aim at ceding to Panama complete sovereignty over the Canal Zone and, eventually, the ownership of the existing Canal and any future canal in the Zone or in Panama that might be built by the United States to replace it.

12. In the First Session of the 91st Congress identical bills were introduced in both House and Senate to provide for the major increase of capacity and operational improvement of the existing Panama Canal by modifying the authorized Third Lock Project to embody the principles of the previously mentioned Terminal Lake solution.

13. Starting on October 27, 1969 (Theodore Roosevelt's birthday), more than 100 Members of Congress have sponsored resolutions expressing the sense of the House of Representatives that the United States should maintain and protect its sovereign rights and jurisdiction over the Panama Canal enterprise, including the Canal Zone, and not surrender any of its powers to any other nation or to any international organization.

14. The Panama Canal is a priceless asset of the United States, essential for interoceanic commerce and Hemispheric security. Clearly, the recent efforts to wrest its control from the United States trace back to the 1917 Communist Revolution and conform to long range Soviet policy of gaining domination over key water routes as in Cuba, which flanks the Atlantic approaches to the Panama Canal, and as was accomplished in the case of the Suez Canal. The real issue as regards the Canal Zone and Canal sovereignty is not United States control *versus* Panamanian, but United States control *versus* Communist control. This is the subject that should be debated in the Congress, especially in the Senate.

15. In view of all the foregoing, the undersigned urge prompt action as follows:

(1) Adoption by the House of Representatives of pending Panama Canal sovereignty resolutions; also similar action by the Senate.

(2) Enactment by the Congress of pending measures for the major modernization of the existing Panama Canal.

To these ends, we respectfully urge that hearings be promptly held on the indicated measures and that Congressional policy thereon be determined for early prosecution of the vital work of modernizing the Panama Canal, now approaching capacity saturation.

Dr. Karl Brandt, Palo Alto, Calif., Economist, Hoover Institute, Stanford, Calif., Formerly Chairman, President's Council of Economic Advisers.

Dr. John C. Briggs, Tampa, Fla., Chairman, Department of Zoology, University of South Florida.

Harold L. Varney, New York, N.Y., Editor, Authority on Latin American Policy, Chairman, Committee on Pan American Policy.

B. Gen. Herbert D. Vogel, Washington, D.C., Consulting Engineer, Formerly Deputy Governor, Panama Canal Zone.

R. Ad. Charles J. Whiting, La Jolla, Calif., Attorney at Law.

(NOTE.—Institutions are listed for identification purposes only.)

Mr. FASCELL. Thank you, Mr. Flood.

We have a final vote pending on a bill on the House floor, and I guess we are all going to have to go and vote.

I have some questions I would like to ask you, if you would care to come back as soon as we answer the rollcall. I suppose my colleagues would like to do that. So why don't we recess until we answer the rollcall, and come right back in a few minutes.

Mr. FLOOD. Good idea. Thank you.

(Whereupon, a short recess was taken from 3 p.m. to 3:20 p.m.)

Mr. FASCELL. The subcommittee will please come to order.

I want to thank our colleague, the Honorable Dan Flood of Pennsylvania, for giving us this very concise and candid statement, with respect to the Panama Canal. We appreciate that he has made himself available to answer some questions, so that we can add to the record.

SOVIET STRATEGY IN THE CARIBBEAN

You raised the issue of Soviet or Communist designs on the Panama Canal. As I understand it, the point you are making is that as long as the United States retains sovereignty over the Canal Zone, those designs will not be implemented.

Mr. FLOOD. Well, Mr. Chairman, when I say the Soviets have designs upon the Panama Canal, I mentioned before we adjourned, part of the Soviet strategy—an excellent strategy and if I were there, I should do the same thing. They want the Kiel Canal, they want the Danube, they want the Strait of Malacca, they want the Suez Canal, they want the Panama Canal. They want to dominate and control the areas adjacent and contiguous to strategic maritime transportation arteries.

Obviously, when that is done, they have a fait accompli, and the Panama Canal would be a jewel in their crown. They have the Suez Canal; the Kiel is under a shadow. They have the Danube and the Bosporus Straits. If they just squeeze, they have the Dardanelles. They are in the Mediterranean now, up to your you-know-what; that takes Gibraltar. Also they are in the Caribbean in position to threaten the Atlantic approaches to the Panama Canal.

The import of sovereignty is exactly the situation which exists in the Middle East today—confrontation with the United States. They don't want that. And with sovereignty, they have it. Without U.S. sovereignty over the Canal Zone, you know what will happen to Panama; like a dose of salts, bing, they go Red, and they would be invited in.

As a matter of fact, Castro did send a hastily organized small expedition, you know, 2 months after he took over, to take the Panama Canal, but the local Indians took care of that with machetes.

Mr. FASCELL. In your opinion, then, if the Soviets established an equal presence in the Caribbean, using Cuba as a military staging base, this would present some real problems for the United States, whether or not we had sovereignty over the canal.

Mr. FLOOD. Of course. About 5 minutes after the British left the Suez, and Egypt took the Suez, Panama had emissaries in Cairo about 3 weeks later, saying, "How do you do this? How do you steal canals?"

INTERNATIONALIZING THE PANAMA CANAL

Mr. FASCELL. Do you feel that the same logic would apply if the canal—the operation of the canal—were internationalized?

Mr. FLOOD. Oh, I think the last thing in the world that any of the nations of the world, including Panama, would want would be to internationalize the Panama Canal. That would be the last thing they would want.

I think of the Japanese, who are now the great customers to the canal. You hear about the tremendous big oil tankers and other types that can't transit the canal. Well, by the year 1985, there would be probably about 33 million tons of cargo bypassing the canal in vessels too large to transit. I also think of the British, who are one of the greatest users of the canal. In our operation of the Panama Canal, we have meticulously met our treaty obligations for the vessels of all nations with tolls that are just and equitable. This is the reason why the users of the Panama Canal are so completely delighted with the way that we have managed it over the years. The last thing in the world that its biggest customers wish is that the canal be internationalized.

Mr. FASCELL. Mr. Culver.

Mr. CULVER. Thank you, Mr. Chairman.

I also wish to commend our most able, articulate and eloquent colleague from Pennsylvania for his customary excellent presentation of his views on this very complicated and important subject.

CONTROL OF THE PANAMA CANAL

I would, if I may, like to pursue the chairman's line of questioning further, to the extent to which we attempt to estimate what cost the U.S. Government must pay to maintain its present status in the Canal Zone.

For example, General Mather testified before this subcommittee that there is a deep undercurrent of resentment against U.S. sovereignty. He went on and called it "latent hostility," and I wonder, Mr. Flood, if you can envision an accommodation that could be formulated which would leave the United States in effective control of the canal for many of the important reasons you have outlined, but at the same time, be responsive to many of the Panamanian complaints, and avoid the kind of confrontation there that has characterized our overseas military presence in so many parts of the developing world, in view of the altered international situation.

I share the implicit concern, I think, that the chairman expressed when he talked about the extent to which conceivably a continuation of U.S. presence, no matter how effected, might well in fact prove to be far more successful in implementing Soviet interests in that area, to the extent to which it contributes to a continuation of this unrest, and as a symbol of American "colonial imperialistic presence," and so forth; and I wonder in view of this kind of problem that we face there, and face with regard to our military presence elsewhere in the world, if you could conceive of a way in which we could work out an accommodation that is more compatible with the modern world.

Mr. FLOOD. Well, let's see if I can give an analogy.

I indicated the Soviet intent, and it is a naked intent, there is no secret there. They have been talking about it for 40 years, about interoceanic communications.

But the Suez is not in Central America. Neither is the Kiel. The Panama Canal is. The Panama Canal is the jugular vein of the hemispheric defense, and say what you will, and with all the poses that they strike, in many of these Latin countries—and the smaller the country, the more elaborate the uniform—you know as well as I that anybody who strikes the Western Hemisphere at any part of it strikes us. This is hemispheric defense.

This, I repeat, is the jugular vein for such defense. We have experienced problems with the Pacific before. We had two divisions, one through the canal, one en route, when World War II ended.

You have this can of worms in South Vietnam or Southeastern Asia, whatever it is going to be, and I can envisage, as can you, that part of the Communist chain from Australia through the Islands through Alaska, and we must have a zone of defense to fall back on, what? The Philippines? The Islands? Maybe back to Hawaii.

Now, the canal is a means not only of economic communication, which was the real basis for its birth—the defense structure has developed since then, with the development of this Nation—but to work out an accommodation, why, of course, you are a legislator, your business is the art of compromise, to work out; but when you say that there is unrest in Panama, that has nothing to do with the canal. There would be unrest in Panama with or without this canal, with a new sealevel canal, with a half dozen canals. Panama is that sort of a place. It is unfortunate, as is Poland. Its worst enemy is geography. And there she is.

SITUATION CHANGED SINCE 1903 TREATY

Mr. CULVER. Would you not agree that the ability of the United States to maintain its control and its influence and protect all its very real military and strategic and economic interests there, as originally envisioned in 1903, is markedly different than the world in which we are required to operate today. Further, that Panama today, politically speaking, is an entirely different atmosphere in which to work out relations with this hemisphere generally?

Mr. FLOOD. I would like to borrow your argument. The only thing wrong with your argument is that I didn't think of it. That is the strongest statement I have heard made at this table today for my position. Precisely. It isn't 1903, it is 1970, and the horizon—there is no horizon. The situation has changed but has changed for the worse. Instead of surrendering the Canal Zone, it should be extended to include the entire watershed of the Chagres River.

Mr. CULVER. Wouldn't that call, though, for an entirely different formulation with regard to U.S. presence and the nature of it and the extent of shared control and influence, on something as sensitive to their own national interest?

Mr. FLOOD. I am very fond of these people. I have known them all my life. When you say they are "Gringo, get out!" types, that is not the people of Panama. You go to the Indians. You have trouble in the city. You have trou-

bles in all cities. We have them within two blocks of here.

Panama City is not Panama. "Have you ever been to the United States?" I say to an Englishman; "Oh, yes, I have been to New York." And somebody says to me, "Have you ever been to China?" "Yes; I was in Shanghai."

Now, New York is about as much America as Shanghai is China. The city of Panama is not the people of the Republic of Panama.

Mr. CULVER. But you take the recent example, if we could turn to it for a moment, you mentioned the South Pacific. Take the case of Okinawa, and the recently concluded arrangements there, concerning the revised nature of U.S. continued military presence on that particular——

Mr. FLOOD. I have no quarrel with that whatsoever.

Mr. CULVER. And the direct correlation and link-up to the domestic political consequences within the nation of Japan in the absence of making some sort of a modification, even though admittedly, we would argue that in the abstract, it is contrary to our national interest.

Mr. FLOOD. I agree, I agree, but there is the development of time, and we can see the element of time there.

And our need is at this time, I find no quarrel with that. I wouldn't do it, but I find no quarrel.

But I see no analogy with my jugular vein, my southern flank, wide open.

Mr. CULVER. I think the analogy I would submit might be that this was a very enlightened accommodation, very much in the strategic national interests of the United States, and in the absence of which, an alteration of that kind or similar to it, we ran the very real risk, in case of a major confrontation with China, for example, or some other situation in Southeast Asia, that we would be denied the utilization of even Japan itself.

In some mutual security endeavor, if we didn't work out some way to bring about a damping down of the political unrest that was being stirred up by this mutual security arrangement of Okinawa, and may well be responsible in bringing about the type of government in Japan, politically speaking, that would deny us the utilization or access of any facilities, which are of paramount importance to our national security interest. So turning again to Panama, is it possible at all, to your way of thinking, that if we continue to allow what is admittedly a source of friction and political instability and military instability to fester, without any initiative or enlightened concession by the U.S. Government, that this may bring about an increased likelihood that this very vital economic and military link would no longer be available to us a handful of years down the road?

Mr. FLOOD. Well, of course, this is a matter of degree. When you look at the original treaty, when you look at the arrangements with the Republic of Panama, when you look at the pots of gold that have fallen from this rainbow into this totally technologically ignorant, endemically unstable people, the employment rates, the thousands and thousands of people, Panamanians, that we employ, the wage scales they get, do you think those people want to see some of these Graustarkian generals in Panama take over that place?

Neither do we.

Mr. CULVER. Well, in terms of national pride and self-interest, which has a very irrational and emotional power all its own——

Mr. FLOOD. Oh, yes.

Mr. CULVER. It is probably the most powerful——

Mr. FLOOD. The Latino is very sensitive.

Mr. CULVER. Undoubtedly the most powerful political movement in the world today.

Mr. FLOOD. We have it here, in our country.

Mr. CULVER. But this chauvinism, therefore, I wouldn't underestimate, and, turning to cost, what do the Panamanians now get for the United States presence in the zone and U.S. control over the canal?

Do we have some figures?

Mr. FLOOD. Their very economic existence—period. Their life's blood. Their existence. We gave birth to them. We have nurtured them, trained them, educated them, fed them, paid them. In fact they call the canal their "lunch counter."

Mr. CULVER. Mr. Flood, do you think someone could possibly provide income figures for the record?

Mr. FLOOD. I would think so.

Mr. FASCELL. We either have it in the record or we will get it for you. The actual revenues, I think, are in the order of $2½ million a year.

Mr. FLOOD. Just a few years ago——

Mr. CULVER. But it is $2 million a year in the canal; their share of canal tolls, for example, is $2 million a year.

Mr. FASCELL. I don't remember the exact figure.

Mr. CULVER. That is the figure I am familiar with.

Mr. FASCELL. We either have it in the record, or will get it.

Mr. FLOOD. Oh, I think that would be excellent.

(The United States pays Panama an annuity of $1.93 million pursuant to the provisions of Article I of the 1955 Treaty of Mutual Understanding and Cooperation between the United States and Panama.)

Mr. CULVER. How much does the United States collect from toll fees?

Mr. FLOOD. You mean in dollars?

Mr. CULVER. Yes, sir.

Mr. FLOOD. Well, everything we collect, by the millions a year, we turn back to the General Treasury. The Canal Company and the Panama Canal Zone are two separate and distinct things. The zone is a governmental agency, and the company is commercial concern, operated on a self-sustaining basis.

Mr. CULVER. But does the U.S. Government——

Mr. FLOOD. It all goes back to the U.S. Treasury. It is a self-paying thing; we do not subsidize this thing.

Mr. CULVER. That's the thing I wanted to bring out.

Mr. FLOOD. It is self-paying.

Mr. CULVER. The United States is making money now off the canal's operation; we don't subsidize it?

Mr. FLOOD. We never did, except the original investment. We have a $5 billion investment. But you can have that much in, no matter what you do. The fact remains that that investment is there.

But as far as the dollar by dollar, month by month, week by week, ship by ship, that washes itself out, and reverts to the Treasury. So in other words, there is no millstone around our neck, as a cost, as a debt of any kind. Moreover, U.S. isthmian activities, directly or indirectly, inject more than $100 million annually into the Panamanian economy.

Mr. CULVER. Thank you, Mr. Chairman.

Mr. FASCELL. Mr. Roybal.

STANDARDS OF EMPLOYMENT IN THE CANAL ZONE

Mr. ROYBAL. Mr. Flood, the Panamanians that I have had the opportunity of talking to complain that there are two standards in the zone.

Mr. FLOOD. The silver and gold standard?

Mr. ROYBAL. No, sir. That is the employment standards, that the Panamanians do not get the same salary doing exactly the same work as an American.

Now to what extent is this actually helping or hurting relations?

Mr. FLOOD. Well, of approximately 16,000 employees of the Panama Canal, say, 12,000, as of this afternoon, are Panamanians; 4,000, say, are Americans. Now they are getting a wage scale, paid by us, far greater than what they would get for the same kind of work any place in Panama, for the Government or private contractor, doing the same kind of things.

Mr. ROYBAL. But the American who is doing exactly the same kind of work, then, is getting a salary that far exceeds the amount that a Panamanian receives?

Mr. FLOOD. That is only in certain categories, supervisory categories, although now in the last treaty we have brought into the supervisory categories at the highest levels many, many Panamanians under the treaty just a few years ago, and I see nothing wrong in that, if they are capable, and many of them are.

Mr. ROYBAL. Don't you think this should have started many years ago, instead of just recently?

Mr. FLOOD. Yes, yes, of course I do. Of course, I do.

Mr. ROYBAL. Do you believe then that over the years, this particular situation perhaps is responsible for some of the unrest that exists in the zone?

Mr. FLOOD. Yes. Yes.

Mr. ROYBAL. And what can we do further to correct it?

Mr. FLOOD. Well, I think first of all, you should discuss this matter with your labor unions that exist there. There are problems within the labor unions, which I would be the first to want to sit with you, and be sure they were clear about it.

There is no intent on the part of this Government, of the Panama Canal Goverment or the Panama Canal Company to discriminate against the Panamanian merely because he is a Panamanian.

Mr. ROYBAL. But the truth of the matter is that he has been discriminated against.

Mr. FLOOD. The truth of the matter is that that has been improved a thousand percent, and up until a few years ago, 10,000 percent, and will be improved further, and should be.

Mr. ROYBAL. And maybe the net profits that are made both by the company and the zone have been as a result of exploitation that has been going on with regard to employment.

Mr. FLOOD. No, no. That is begging the question. No, this is not so. The maintenance of the operation of this canal has been one of the major engineering miracles in the history of man. That's what has done it. Efficiency, operations, maintenance and management, not mere hands.

You need those to do it, but to suggest that because this was an aggrandizement, that this was some great American corporation, who achieved its opulence in the mauve decade, by bleeding its workers—now nobody, I never heard that said, until this minute.

Mr. ROYBAL. Well, I have heard it said many times. And I have also seen——

Mr. FLOOD. What, the accumulation of funds by America, by the United States, after a $5 billion investment, was the result of making slaves out of the Panamanian workers?

Mr. ROYBAL. No, but that the profits that have been derived from that operation resulted from the exploitation of individuals who were paid less than the wages paid Americans.

Mr. FLOOD. Mathematically, I suppose it would work out. If one man gets $10 and another gets $5, then you are ahead $5 some place. I am sure that is so. Yes. But it is certainly not a causus belli. It is not a gut issue. It is certainly not one of the two things that is before this House on the sovereignty and the operation of the canal. There are many other things.

Mr. ROYBAL. But it is a thing that——

Mr. FLOOD. I could talk to you here all night about it. I mean, many legitimate complaints. No question about that. I know of many. You know I know. I have talked to these Spaniards. I know. I have talked with them for years, oh, yes.

Mr. ROYBAL. Well, if we want something said that we don't want anybody else to understand, perhaps you and I could carry on a conversation in Spanish.

Mr. FLOOD. Let's keep this clear.

Mr. ROYBAL. That's all, Mr. Chairman.

Mr. FASCELL. Well, as a matter of fact, in the last treaty negotiations, we made many of the corrections of inequities dealing with——

Mr. FLOOD. Which both of these gentlemen are talking about, oh, yes, and more will be made. More will be made.

Mr. FASCELL. There are still some unresolved economic questions, but nothing that doesn't lend itself to an accommodation; is that correct?

Mr. FLOOD. There is no question about that. Of course not. I would be the first to say so.

Mr. FASCELL. In other words, you support accommodation, so long as it doesn't mean the dilution of U.S. sovereignty. That is your position?

Mr. FLOOD. That is correct. I would be their spokesman. I would be the devil's advocate.

Mr. CULVER. Mr. Chairman.

Mr. FASCELL. Mr. Culver.

1967 PROPOSED DRAFT TREATIES

Mr. CULVER. At that point, just so the record is not ambiguous on this point, on page 4, Mr. Flood, of the prepared statement, when you make reference to, you know, the role of Mr. Anderson, in the continuing negotiations, and you say, and I quote: "was the chief negotiator for the discredited 1967 treaties," could you be a little more specific, then, for purposes of the record—which aspects?

Mr. FLOOD. Well, of course, it is my term.

Mr. CULVER. Yes, sir.

Mr. FLOOD. I have—I can't put an imprimatur on the word "discredited." I dictated the statement. I say that the intent to propose the under-the-table efforts, the hanky-panky that went on—if you sit on Defense Appropriations, you hear about Flood's spies. Well, I don't have a crystal ball. I have big ears.

I have extraordinary sources of information, as you do. People wonder, "How do you know about this thing, this gun, or that airplane?" Big ears. And spies. Whenever these things develop, they are brought to my attention.

Mr. CULVER. But just speaking here——

Mr. FLOOD. And these treaties, this was an effort by certain levels of the State Department, these faceless wonders, who still exist, and it is like trying to pick up a handful of quicksilver to try and do any good with them.

I was on this committee, you know; I was chairman of the subcommittee. I went all through this. I was present for the first meeting of the United Nations. I was present for the accouchement. I know these people, and every once in a while I still bump into one of them, still alive and breathing. It is hard to imagine, but he is still there: faceless, nameless, but dauntless, and they do these things.

And they have this concept that this should be done, that sovereignty must be abandoned, and then, as you say, in this proposed treaty, and then, of course, a brilliant reporter on the Chicago Tribune got a hold of the treaties, and in the meantime they were going around like this—the State Department—and the entire Government, the Kennedy administration, the Johnson administration, and now the Nixon administration, have been trapped by the same people.

Mr. CULVER. But when you make reference, then, Mr. Flood, to the discredited 1967 treaties, the cause of your criticism in that regard is the erosion of sovereignty, of our national sovereignty.

Mr. FLOOD. Yes, the public revulsion. In the House, 150 Members of this House, overnight, nationwide, when the press, the news media, carried this story——

Mr. CULVER. As to how the treaty was arrived at, distinguished——

Mr. FLOOD. No, what they proposed to do. First of all, loss of sovereignty.

Mr. CULVER. Loss of sovereignty?

Mr. FLOOD. And that discredited the treaty.

Mr. CULVER. And yet, in response to Mr. Roybal's question, you did say you specifically welcomed the initiatives in the labor field, for example.

Mr. FLOOD. Oh, yes.

Mr. CULVER. Which did represent an erosion, a diminution of American control.

Mr. FLOOD. I agree with that.

Mr. CULVER. So it wouldn't be really a blanket denial or resistance to certain accommodations, given the political realities in which we are forced to operate today.

Mr. FLOOD. Of course, sovereignty is an absolute thing. You can't be just a little bit pregnant.

Mr. CULVER. Well, for example, take our sovereignty, you know, with regard to our Okinawa military interests.

Mr. FLOOD. That is not sovereignty. That was by right of conquest. We occupied. This is a different rule of international relations. We occupied Okinawa by right of conquest. That is a different breed of animal.

This relationship is a treaty between sovereign states.

Mr. CULVER. But certainly, you indicate, you certainly imply here, that you recognize the necessity to review and to take, you know, corrective action in terms of where a mutuality of interest has to be sustained, and certain problems presented themselves that would make a continuation of that arrangement impossible in the absence of military force.

Mr. FLOOD. You know my history in this. I would be the first, certainly, to agree.

Mr. CULVER. Well, what about some additional steps, like——

Mr. FLOOD. I am no right-wing, breast-beating conservative, finding a Communist under every table with a bomb. I haven't been, in 25 years. I am not that. But, I can see both ways.

Mr. CULVER. What about some of the suggestions that have been advanced concerning the adoption of a joint court system in the zone, or some alteration in the U.S. commissaries there, to provide for——

Mr. FLOOD. This should be discussed. This should be discussed. One of the great purposes of President Theodore Roosevelt was to avoid the recriminations and conflicts that always accompany extraterritorial rights.

Mr. CULVER (continuing). An alleviation of some of the political pressures?

Mr. FLOOD. This sort of thing should be discussed. That wouldn't upset me a bit. Within the rule of reason, of course.

QUALITY OF U.S. SOVEREIGNTY

Mr. FASCELL. Mr. Flood, what is your position—and I know you have discussed it before, but I would like to get it on this record—with respect to the absolute quality of sovereignty? The 1903 treaty raises the question, at least as far as the Panamanians are concerned, that sovereignty in this case was not meant to be absolute, because there is a residual right, territorially, at least, to the ownership of the land itself.

Mr. FLOOD. The right and title, the sovereignty of the United States, was in perpetuity. And I understand the perpetuity to mean just one thing. I can't translate it. Perpetuity is an absolutism.

Mr. FASCELL. Well, I don't have the language of the treaty here before me.

Mr. FLOOD. Well, that's the catch. That's the phrase which is the heart and merit of your position.

Mr. FASCELL. Well, it is not my position.

Mr. FLOOD. I mean the position as stated.

Mr. FASCELL. But the question is whether or not under the 1903 treaty, title in the land in perpetuity actually was transferred? And whether or not, when the property ceased being used for the purposes for which exclusive sovereignty was granted, it would revert to Panama. That's the issue.

Mr. FLOOD. Every piece of private property that was in the Canal Zone was purchased by the United States, at an agreed price, and paid for, and title became absolute, as far as your real estate law. It is an absolutism. Now, even——

Mr. FASCELL. I understand what you are saying, Mr. Flood, but I am merely saying the issue has been raised in the last hearings we had in this subcommittee, that it is an issue, legal or otherwise——

Mr. FLOOD. Oh, I have heard it raised many times, but by the way, even with a title in fee, at least in my State, there can be a residuary, but that does not affect the title in fee, and that is an absolutism.

Mr. FASCELL. Well, the question, of course, is: If you have a residual right, do you or do you not have the entire title?

Mr. FLOOD. Oh, this is not a residual right.

Mr. FASCELL Well——

Mr. FLOOD. It affects—under an absolute title in fee, it amounts to a grant. But there is no reservation of title.

Mr. FASCELL. All right.

Mr. FLOOD. In perpetuity, the sovereignty is absolute.

Mr. FASCELL. I understand your position, and I agree the legal interpretation——

Mr. FLOOD. I don't want that to affect these other things we are talking about at all. These are different things.

Mr. FASCELL. It does affect the question, though, whether or not, in carrying out any kind of accommodation which might be compatible with modernization and the necessity for improving the canal, how far you can go. That's the issue.

You see, for example, some people took the position that flying the Panamanian flag alongside the American flag at certain designated places in the Canal Zone was a diminution of U.S. sovereignty.

Mr. FLOOD. Well, you have breast-beaters any place.

Mr. FASCELL. Yes.

Mr. FLOOD. That leaves me utterly cold. The fact that a few barefooted boys with a little free fusel oil, crossed the border and ran up a flag, and got tangled up with a lot of American high school students—I have seen things worse than that happen in my own district, on pay nights in the coal field.

Believe me, this doesn't affect sovereignty, or the major issue here as between sovereign states.

Mr. FASCELL. Mr. Bingham, did you want to inquire at this point?

Mr. BINGHAM. No, thank you, Mr. Chairman.

TERMINAL LAKE-THIRD LOCKS PLAN

Mr. FASCELL. Mr. Flood, you mentioned two plans. Could you describe for the record, the difference between the Third Locks plan and the Terminal Lake-Third Locks plan.

Mr. FLOOD. Oh, yes; they are two things.

Mr. FASCELL. Right.

Mr. FLOOD. As I mentioned, the 1939 Third Locks plan had the fatal defect of in no way eliminating the appalling bottleneck, the technical bottleneck, and the actual bottleneck at the Pedro Miguel locks.

Now that question must be the first engineering question resolved. The Pedro Miguel bottleneck lock must be eliminated, then take all of locks south of the Miraflores into one lock; then you establish a new lock, and then you create a terminal lake on the Pacific side, which is the same thing as you have on the

Atlantic side, and to do exactly the same thing, raise to the proper level, and that is the Achilles heel of the present technical operation—the failure to have a terminal lake.

Now the combination of both is what we call the Terminal Lake-Third Locks plan; it is the combination of the two.

Now that eliminates the Pedro Miguel lock, creates a terminal lake at the Pacific end, and you have no problem then, for it mitigates the problems we have on the Pacific end, of fog and lockage surges, by having this terminal lake. Also it would provide a summit-level anchorage where you can assemble vessels for transit which now you can't do on the Pacific side, and it is a grievous problem. And the Miguel lock thing is just simply awful.

Mr. FASCELL. Now the Terminal Lake-Third Locks plan—studies on that have been completed?

Mr. FLOOD. Oh, yes. But there is still much to do.

Mr. FASCELL. And the issue for resolution is now pending, where?

PROPOSAL FOR SEA LEVEL CANAL

Mr. FLOOD. Well, there is a Commission in this country and commissions in this town, there are commissions upon commissions—it has cost us $24 million so far for us to give birth to this, and I knew that day they were appointed, they would merely change the color on the last report—they got blue—and two or three graphs, and a couple of charts, $5 million; it is now $24 million. They are now down in the rain jungles and the swamps of the Colombian border, searching for a site to build a canal.

My own grandmother wouldn't build one down there, and they know it. They know it prefectly well. I know where the site they propose is; so do you; but they are going to file a $24 million report from the Commission.

Mr. FASCELL. You mean on the Colombian side or the Terminal Lake-Third Locks plan?

Mr. FLOOD. No. They will have a record, it will have probably a green cover this time, but we will have spent the $24 million. They will espouse—the Ambassador is wearing two hats—that is why I say you are sending the devil to investigate hell. He is bringing this young fellow—what's his name? I never heard of him—some youngster from the White House is going down there, 33 years old, as Ambassador, and he is going to be in charge of carrying out orders to put that canal there, at sea level.

Mr. FASCELL. What do your informants tell you? Has he done anything yet? I haven't heard that anything has been done yet.

Mr. FLOOD. He is about to give birth to it, yes.

Mr. FASCELL. Birth to what, another canal?

Mr. FLOOD. The treaties which would reduce the sovereignty in the canal, yes, and don't forget it——

Mr. FASCELL. You mean, it is because this Presidential Ambassador has now been appointed, the fear that he is about to negotiate——

Mr. FLOOD. Under Mr. Anderson, and they are about to come up through the Army Engineers with this report, and I can tell you the conclusion now, give you the——

Mr. FASCELL. Not for modernization?

Mr. FLOOD. Oh, no, no. This is for the new canal.

For modernization, they have the report, and I submit, and I would suggest you examine it, by investigation; it is the outstanding authorities in the world who are concerned about this, recommend the Terminal Lake-Third Locks system, and consider this sea level canal to be—they could not find a good reason.

Now it is going to be built by nuclear power—fissionable material.

Mr. FASCELL. I thought that had been discarded.

Mr. FLOOD. Oh, everything they have drawn up has been totally discarded. The last thing was they are going to build it by fissionable material, which would kill everybody within 10 miles of the canal, so they said "Well, that's not a good idea."

ECOLOGICAL EFFECT OF SEA LEVEL CANAL

Mr. FASCELL. Well, wasn't there also a tremendous environmental problem, ecological problem, with the sea-level canal?

Mr. FLOOD. Oh, yes, and who in the world would be better concerned than you, Mr. Chairman, from Florida? The ecological problem is bringing in these sea snakes, which are worse than the cobra, from the Pacific, knocking out this pocket of fresh water, and infesting every beach from Virginia to Brazil.

Mr. FASCELL. Well, we have some sea snakes that are doing some infesting, but they didn't come from——

Mr. FLOOD. They have got two legs, though, those fellows. I know them. They have got two legs.

Mr. FASCELL. Are you familiar with the Kearney report, Mr. Flood?

Mr. FLOOD. I have excerpts from it; yes.

Mr. FASCELL. Then you are talking about the feasibility——

Mr. FLOOD. May I add this? About these objections. You know, the first objection about this canal was naval gunfire. "You can't build this canal because the navies of the world will destroy it with naval gunfire." Well, that was in 1905.

Now when the gunfire thing didn't work out, naval gunfire, well, all of a sudden we had bombers, World War II. "Got to have a sea level canal, because the bombers will destroy the Panama Canal." Well, that didn't stand up very well.

Finally, the atomic bomb. Well, of course, you can destroy any canal. If you want to destroy a sea level canal, or any, you can destroy anything you want to. No question about that. No question about that at all.

There is nothing sacred from destruction, the way we are operating today in the military sense. But all of these, every year, you have these proponents of the canal come up with some weird ideas as to the danger of the existing canal, or modernizing it, or the tremendous advantage of the sea level canal.

And this goes on and on and on like Tennyson's brook. It just doesn't stop.

This is a discredited thing, internationally, except that there is residual remainder, the palace guard. The old guard dies, but never surrenders, and they will pop up out of any place over the sea level canal.

(Representative Flood subsequently furnished the following statement:)

AUGUST 3, 1970.

BATTLE OF THE LEVELS—A SUCCESSION OF BUGBEARS—BY HONORABLE DANIEL J. FLOOD

The story of the modern "battle of the levels", is merely a continuation of age-old arguments over type of canal.

In 1905–06, it was the alleged danger from *naval gunfire* used by sea level advocates, who were overcome by the knowledge and vision of John F. Stevens backed by President Theodore Roosevelt.

In 1939, it was the alleged danger of *enemy bombing*, which led to the Third Locks Project failure.

In 1945, it was fear of the *atomic bomb* that resulted in the abortive 1945–48 investigation under Public Law 280, 79th Congress, which recommended only a "sea level" canal on the basis of its alleged greater security. This recommendation failed to receive the approval of President Truman because of the clarification in the Defense Department of the fallacies in the application of the security and national defense factors in the statute.

In 1964, it was the danger of sabotage from *"two sticks of dynamite"* that led to the present inquiry.

Now, in 1970, it is the danger of "guerrilla warfare".

From the foregoing the pattern is clear; change the bugbears of justification when earlier arguments prove ineffective.

The defense needs of the Panama Canal are for the existing canal and not for some hypothetical waterway that may be constructed in the indefinite future.

Moreover, the defense of the Canal, like that of the major ports and rail systems of the United States depends not upon passive features of design, but the combined power of the Armed Forces of the United States.

MODERNIZATION OF PANAMA CANAL

Mr. FASCELL. We have had testimony before this committee that indicates that studies which have been made with respect to both economic feasibility and engineering feasibility indicate that the present canal could be modernized to take us to the year 2000, in very good shape.

Mr. FLOOD. Well, of course, a sea level canal would cost you $3 billion. You have got $157 million in the present canal now as developed by the Third Locks Project and enlargement of Gaillard Cut. In a very short period of time, the terminal lake proposal can be done, at a minimal figure, or as fast as your need to meet the demands for transit. I tell you that 40,200 annually—and it will be a long, long generation, and a century, before you will have 40,200 ships. And the existing canal, modernized, can do that.

Now don't let them tell you about, "Well, look at the big ships that are being built that can't go through the canal." For every big ship in the year 1985 that can't go through the canal, but goes around the Cape, there will be 300 that will go through it. Besides, those super vessels are built for the purpose of avoiding going through any canal and paying tolls.

USE OF RAIL LINE IN CANAL ZONE

Mr. FASCELL. I have ridden that train in the Canal Zone—or is that outside—and I have a hard time accepting your statement that it is a vital transportation link.

Mr. FLOOD. Oh, no, vital in this sense: Nothing concommitant with the canal—and I am not speaking about the seat you ride in, like an amusement park. I don't mean that at all. I mean that mere railroad, where it is, with the two terminal controls, and we had to stop them.

Now, in that treaty we gave them their terminals of the Pacific and the Atlantic, the terminal buildings, the stations, we call them, in this country. And for people who can't even keep the sewage and the garbage clean in their streets, to run a canal, they made a mess of the two buildings that we shouldn't have given them in the first place.

Thank God, the Congress saved the railroad.

Mr. FASCELL. Yes, but I don't understand how the train and the tracks help us.

Mr. FLOOD. Well, the tracks, any tracks, anything that will carry anything through an isthmus will help you—a new road, a new railroad, anything like this. But we have——

Mr. FASCELL. You mean for carrying supplies? Is that what you are getting at?

You see, I am a little bit lost as to what the value of that train is.

Mr. FLOOD. Well, primarily, it is a defense structure, primarily, although originally it was the transport of the old miners from one side to the other, originally.

Mr. FASCELL. But it is your view that the train is still a vital link in the operation of the Canal?

Mr. FLOOD. I say this, that anything we have there existing today which will help us in transport, including the outrageous sums we pay to the aristos who own the cement companies for the lousy cement they give us to build those roads, and put the money in Swiss banks, which they did with

the $36,300,000 we gave them—I bet you the best drink in town that three-fourths of that is in a Swiss bank now. That has been going on for 40 years.

I don't think—you can't change these people by just making a treaty. You can't change this, these 16 families. But that is not—that is the Panamanians.

Mr. FASCELL. That is not the issue. I am just trying to find out what is the use of the railroad.

Mr. FLOOD. Any railroad is important for transport of anything, whether it is the narrowest gage or a double track. That is important but its greatest value is its ready availability in event of interruption of transit that may be caused by slides when it would become a major transcontinental railroad overnight.

Mr. FASCELL. I think I would go along, generally, with that. But, as I remember this railroad, all it has are a few passenger cars.

Mr. FLOOD. This isn't for the transportation of passengers. This was an adjunct of the canal. Any railroad—for instance——

Mr. FASCELL. You mean it has freight cars?

Mr. FLOOD. Yes, indeed. In the town that I come from, I have more railroads going into my city of Wilkes-Barre than any place in the United States, to haul coal. But you couldn't go a hundred miles, because there were no passenger trains. They came in there, these great railroads, to haul coal.

Now, the fact that you put a few passenger cars on the Lehigh Valley or the Pennsylvania, a few passenger trains between New York and Buffalo, that was just to satisfy the peasants. These seats that you and I are on are certainly not the purpose of a railroad at the Panama Canal across the Isthmus. That is just a convenience. It helps the tourist from the Gray Line go from one place to another. That is about all that does.

PROTECTION AND DEFENSE OF PANAMA CANAL

Mr. FASCELL. If the Panama Canal can be adequately protected from other U.S. bases in the Caribbean, that would be an operational decision which would be satisfactory, don't you think?

Mr. FLOOD. Well, of course, that is true of any canal.

Mr. FASCELL. I am thinking particularly about the issue of the U.S. Southern Command.

Mr. FLOOD. Yes, I was thinking of that, too. But here is some language that I would want you to read. You can't read my handwriting, because even I have a time.

"Moreover, the defense of the canal"—and we are talking about mere defense, the defense of the canal—"like that of major ports, major rail systems, of the United States, depends not upon passive features of design, but the combined forces of the entire Armed Forces of the United States."

That is true. Of course, that is true. Anybody that blinks at the canal, from the East or West, ignites the defense of the Western Hemisphere. And that means the Armed Forces of the United States.

The same thing would be true of the Port of New York or of San Francisco. It wouldn't be one command.

Mr. FASCELL. We have had testimony in this committee in closed session with respect to the security of the Gulf of Mexico and the Caribbean Sea, and the Panama Canal, and——

Mr. FLOOD. Mr. Chairman, I am on the Defense Appropriations Committee.

Mr. FASCELL. Right, and I just wanted to be clear.

In other words, you would prefer to keep the Southern Command, but——

Mr. FLOOD. Oh, yes.

Mr. FASCELL (continuing). But admit that a canal could be adequately protected from other places.

Mr. FLOOD. It could be protected. The canal could never be adequately protected unless the entire Armed Forces of the United States—that would be an act of war. This wouldn't be a guerrilla action. This wouldn't be South Vietnam. South Vietnam would be a little gas on the stomach compared to anybody touching that ditch.

SOVEREIGNTY PROVISIONS OF 1903 TREATY

Mr. FASCELL. I just want to get this in the record, Mr. Flood, so there won't be any confusion about the question of sovereignty and why the issue was raised. And I am not making a case for it or against it.

Article II of the 1903 treaty says:

The Republic of Panama grants to the United States in perpetuity the use, occupation and control of the zone of land and land under water for the construction, maintenance, operation, sanitation, and protection of said Canal.

And then it goes on.

Mr. FLOOD. Yes.

Mr. FASCELL. That is article II basically.

Article III——

Mr. FLOOD. I know it like the Lord's Prayer.

Mr. FASCELL (reading):

The Republic of Panama grants to the United States all of the rights, power and authority within the zone mentioned and described in article II of this agreement and within the limits of all auxiliary lands and water mentioned and described in said article II, which the United States would possess—

And here is where we get into difficulty—and exercise if it were the sovereign of the territory within which said lands and waters are located—

et cetera.

Those two passages read in conjunction have given rise to a difference of opinion.

Mr. FLOOD. That is correct. This is semantics.

Mr. FASCELL. On the other hand, the treaty has been interpreted to mean a perpetual grant of the land itself; on the land, on the Panamanian side——

Mr. FLOOD. You have stated the question. It is semantics.

Mr. FASCELL. The question has been raised whether or not the words "if it were the sovereign," read in conjunction with the "grant in perpetuity" of the use, occupation, and control of the zone for a specified purpose, is in fact total sovereignty.

Mr. FLOOD. Mr. Chairman, it was raised about the very first week after the treaty was signed.

Mr. FASCELL. That is the only point I was making, that it was there for a long time.

Mr. Bingham.

Mr. BINGHAM. Thank you, Mr. Chairman, I appreciate your inviting me to participate, although I am not a member of this subcommittee.

Mr. FASCELL. You are a member of the full committee and we are delighted to have join us here.

Mr. BINGHAM. Yes, I am a member of the full committee.

I would like to ask this, Mr. Flood. And if this has been covered before, Mr. Chairman, please let me know.

RELATIONS OF OTHER LATIN AMERICAN COUNTRIES WITH PANAMA

Mr. FLOOD. Well, let me say it this way.

Of course, I do. I can't pretend Panama is some place else. I can't pretend it is not there. I can't pretend it is on the moon. Of course, it is there. It is people, and they live and breathe, just like people do in all these new developing countries, all over the world.

And there is a suffrage, as we just said a few minutes ago, in Latin America, just as we have it here in our own country. We certainly should be able to recognize it someplace else. And we do. At least most of us do.

But I see no place in this resolution on the question of sovereignty for this isthmus, the Canal Zone itself, on this broad, everpresent, yet to be solved—with the help of God—question. But that is not peculiar to this resolution or to this statement. I am speaking of two entirely different things, the sovereignty of the canal and the modernization of this canal into this system.

But these questions that go to the integrity of the Nation, these questions that go to feeling for people, these questions that go to this suffrage and nationalism, are not peculiar to Panama but to world problems—all races, colors, and peoples, creeds, and religions—and oh, yes, that is present. You can't pretend by passing this resolution that it isn't. It is.

Mr. BINGHAM. And what would you say would be the impact on our relations with the Latin American peoples generally of the adoption of this resolution?

Mr. FLOOD. I have discussed this over a period of years. And I have seen many governments change, on both the east and west coasts and central part of South America.

At the United Nations in New York, here in Washington, the South American League, it is essential and necessary that they strike a pose for their Latin brothers. But, believe me, they will not break down and cry, none of them. None of them. And I hold no brief for many of the governments to whom I have spoken in the last 25 years, believe me, about fait accompli.

Our position must be very careful, so that out of an abundance of caution, and trying to do good, we don't do bad as well. We should insist that the people must speak for themselves, the people must be free, the people must create their own governments, and so on and so on, about now. This is the subject that I would like to discuss with you, because you are for the authority, but not in this resolution. That is no cause for alarm here.

Mr. BINGHAM. But when you say that these people with whom you have spoken indicate they have to make certain noises in opposition, doesn't that suggest to you that they make those noises because the public in the Latin American countries feels very aggrieved about the continuing position of the United States in the Panama Canal Zone?

Mr. FLOOD. No, oh, no.

Mr. BINGHAM. It does to me, frankly.

Mr. FLOOD. Well, it doesn't to me, frankly.

Mr. BINGHAM. What did you mean, then, that they had to make certain noises about?

Mr. FLOOD. It means they must make certain noises because they are aware that their people are aggrieved about certain things. But in Brazil, in Argentina, in Peru, in Paraguay, the last thing in the world that they are thinking of is the Panama Canal. They couldn't care less.

Mr. BINGHAM. I am puzzled by your statement—and perhaps you went into this before—that the surrender by the United States of the Canal Zone and Canal would inevitably result in a Communist takeover of Panama, as occurred in Cuba, which would include the canal itself.

Mr. FLOOD. We developed this at some length before you were here.

Mr. BINGHAM. Well, then, I am sorry. I don't want to pursue it, if it has been covered.

Mr. FLOOD. Well, perhaps——

Mr. BINGHAM. No, I don't want to duplicate anything.

Mr. FLOOD. I understand. We can go over it.

Mr. FASCELL. We are going to have to go to the floor of the House and vote.

Are there any other questions?

If not, I want to thank you, Mr. Flood. We appreciate your coming here, making your statement, answering all of our questions, and helping this subcommittee in its study of the question of the security of the Caribbean and the Panama Canal.

Mr. FLOOD. Thank you. I am glad you permitted me or asked me to come. And I

urge that I be invited again, because, frankly, I smell something in the offing.

Mr. FASCELL. Without objection, the record of the hearings will remain open for the acceptance of additional statements from our colleagues in the House.

The subcommittee stands adjourned.

(Whereupon, at 4:15 p.m. the subcommittee adjourned, to reconvene at the call of the Chair.)

(The following statement was subsequently received:)

STATEMENT OF REPRESENTATIVE DURWARD G. HALL ON THE PANAMA CANAL

Mr. Chairman, it appears that this Nation has become "obsessed" with the idea of giving up control of the Panama Canal. It is my considered judgment that such action, if accomplished would contribute greatly toward smoothing the roadbed over which the juggernaught of international communism would travel.

We have given away the island Iwo Jima and plan same for Okinawa—our hard won and most strategic base in the Pacific.

We have given away Wheelus Air Force Base, undoubtedly its tarmac will soon become a favored resting place for aircraft bearing the hammer and sickle.

Now comes the news that the President has appointed Mr. Daniel W. Hofgren, a man whose credentials as a negotiator are at best suspect, to be a special representative of the United States for the Interoceanic Canal Negotiations, with the rank of ambassador.

Mr. Chairman, I think it is time that the Congress makes it perfectly clear that this Nation has no need for a negotiator. The Congress should make perfectly clear, once and for all: We are there, we intend to remain there, and, in the language of today, the sovereignty of and Panama Canal itself—is unnegotiable. It's time we made crystal clear that this involves U.S. territory, and hence is a constitution prerogative of the House and entire Congress.

I have joined with my colleagues from Missouri, Pennsylvania, and Ohio in introducing legislation that would arm the President with the sentiment of the House of Representatives and that of the American people in any future negotiations with the Goverment of Panama over the status of the Canal Zone.

It is essential that this be done so that a reoccurrence of the abortive proposed 1967 treaty does not come back to haunt us. As many may remember this proposed 1967 treaty contained provisions that ceded additional rights of the Canal Zone to Panama, gave Panama joint administration, increased our annual payments to Panama, raised tolls, and forced the United States to share its defense and police powers with Panama. When the text of this treaty was published there was a hue and cry throughout the United States opposing its provisions. At that time about 150 Members of Congress introduced or co-sponsored resolutions expressing the sense of the House that it was the desire of the American people that the United States maintain its sovereignty and jurisdiction over the Canal Zone. The same language exists in the resolution we are introducing today. Public indignation ran so high that the 1967 draft treaty was never sent to the other body for ratification. I ask that those hearings be made a part of this hearing record!

Mr. Chairman, it is now over two years later. Much has transpired. A military junta is now ruling Panama. A new administration has taken over the reins here in Washington. On the other hand, much has remained the same. Castro is still preaching and exporting revolution in Latin America. American property is still being ex-appropriated "south of the border." Many people both here and abroad call for the surrender of American bases and rights throughout the world. The Panamanian Government is aware of this and is now willing to make another attempt to negotiate a new treaty. They know that they have *nothing* to lose, and *everything* to gain. They no doubt feel that if they obtain concessions from us as they did in the negotiations for the 1967 treaty, they can obtain them again in any new round of negotiations.

I am also confident that the citizenry of this country know and comprehend the strategic importance of the Canal Zone. As a Member of the House Committee on Armed Services I was *particularly* concerned about the possible effect of the 1967 treaty on both the subjects of national security and hemispheric defense. The importance of the Canal Zone as a bastion on our "southern flank" cannot be overrated. Without our control of the Canal Zone the possibility of a potentially hostile regime in Panama denying access of the transferring our naval forces from ocean to ocean ever grows. The loss of this access could destroy a link in our defense chain and could produce a disaster. It is particularly inappropriate in this time of contingency expectancy around the world.

Mr. Speaker, intertwined with the aspect of *national security*, is the equally important area of *hemisphere defense*. The Canal Zone under our control and jurisdiction serves as an outpost thwarting the perverted ambitions of Castro, Moscow and Peking. Our presence serves as a constant reminder of our determination to stop subversion in Latin America. I ask, would Panamanian control of the canal serve a like purpose? I think the answer is obvious.

Besides military considerations, the *commercial* considerations must also be examined. A Communist or hostile government could completely close the canal to United States shipping. Over sixty-five percent of all United States shipping passing through the canal annually either originates or terminates in United States ports. The added shipping costs, as well as the curtailment of shipping would be astronomical in the event this facility was denied our use.

Besides paying the price for increased shipping costs, the United States taxpayer could possibly be forced to surrender his aggregate investment of over $5,000,000,000 which would constitute the biggest single "give-away" in recorded history. I cannot envision the American people wishing to write off this huge public asset, without some reasonable and tangible compensation in return. Let's at least put the question to them!

Mr. Chairman, I am happy to inform you that many Members of the House of Representatives are in total agreement with the statement I have made here today, and I remind you that no other branch of the Government has the feel or the knowledge of the electorate as does the membership of the House.

It is imperative that all who are concerned do everything in their power now, to prevent the surrender of our right to the control of the Panama Canal. We cannot sit idly by and watch the Panama Canal become another Suez.

H. RES. 593

Whereas it is the policy of the House of Representatives and the desire of the people of the United States that the United States maintain its sovereignty and jurisdiction over the Panama Canal Zone; and

Whereas under the Hay-Pauncefote Treaty of 1901 between Great Britain and the United States, the United States adopted the principles of the Convention of Constantinople of 1888 as the rules for the operation, regulation, and management of said canal; and

Whereas by the terms of the Hay-Bunau-Varilla Treaty of 1903, between the Republic of Panama and the United States, under the authority of the perpetuity of use, occupation, control, construction, maintenance, operation, sanitation, and protection for said canal was granted to the United States; and

Whereas the United States has paid the Republic of Panama almost $50,000,000 in the form of a gratuity; and

Whereas the United States has made an aggregate investment in said canal in an amount of over $5,000,000,000; and

Whereas said investment or any part thereof could never be recovered in the event of Panamanian seizure or United States abandonment; and

Whereas under article IV, section 3, clause 2 of the United States Constitution, the power to dispose of territory or other property of the United States is specifically vested in the Congress; and

Whereas 70 per centum of the Canal Zone traffic either originates or terminates in United States ports; and

Whereas said canal is of vital strategic importance and imperative to the hemispheric defense and to the security of the United States; and

Whereas, during the preceding administration, the United States conducted negotiations with the Republic of Panama which resulted in a proposed treaty under the terms of which the United States would shortly relinquish its control over the Canal; and

Whereas there is reason to believe that the present dictatorship in control of the Government of Panama seeks to renew negotiations with the United States looking toward a similar treaty; and

Whereas the present study being conducted by the Atlantic-Pacific Interoceanic Canal Study Commission may result in a decision to utilize the present canal as a part of a new sea level canal; and

Whereas any action looking toward an agreement with the Government of Panama which would affect the interest of the United States in the Canal would be premature prior to the submission of the report of the Commission in any event: Now, therefore, be it

Resolved by the House of Representatives, That it is the sense of the House of Representatives that the Government of the United States maintain and protect its sovereign rights and jurisdiction over said canal and that the United States Government in no way forfeit, cede, negotiate, or transfer any of these sovereign rights or jurisdiction to any other sovereign nation or to any international organization.

H.R. 3792

A bill to provide for the increase of capacity and the improvement of operations of the Panama Canal, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Panama Canal Modernization Act".

SEC. 2. (a) The Governor of the Canal Zone, under the supervision of the Secretary of the Army, is authorized and directed to prosecute the work necessary to increase the capacity and improve the operations of the Panama Canal through the adaptation of the Third Locks project set forth in the report of the Governor of the Panama Canal, dated February 24, 1939 (House Document Numbered 210, Seventy-sixth Congress), and authorized to be undertaken by the Act of August 11, 1939 (53 Stat. 1409; Public Numbered 391, Seventy-sixth Congress), with usable lock dimensions of not less than one hundred and forty feet by not less than one thousand two hundred feet by not less than forty-five feet, and including the following: elimination of the Pedro Miguel Locks, and consolidation of all Pacific locks near Miraflores in new lock structures to correspond with the locks capacity at Gatun, raise the summit water level to its optimum height of approximately ninety-two feet, and provide a summit-level

lake anchorage at the Pacific end of the canal, together with such appurtenant structures, works, and facilities, and enlargements or improvements of existing channels, structures, works, and facilities, as may be deemed necessary, at an estimated total cost not to exceed $850,000,000, which is hereby authoriezd to be appropriatd for this purpose.

(b) The provisions of the second sentence and the second paragraph of the Act of August 11, 1939 (53 Stat. 1409; Public Numbered 391, Seventy-sixth Congress), shall apply with respect to the work authorized by subsection (a) of this section. As used in such Act, the terms "Governor of the Panama Canal", "Secretary of War", and "Panama Railroad Company" shall be held and considered to refer to the "Governor of the Canal Zone", "Secretary of the Army", and "Panama Canal Company", respectively, for the purposes of this Act.

(c) In carrying out the purposes of this Act, the Governor of the Canal Zone may act and exercise his authority as President of the Panama Canal Company and may utilize the services and facilities of that company.

SEC. 3. (a) There is hereby established a board, to be known as the "Panama Canal Advisory and Inspection Board" (hereinafter referred to as the "Board").

(b) The Board shall be composed of five members who are citizens of the United States of America. Members of the Board shall be appointed by the President, by and with the advice and consent of the Senate, as follows:

(1) one member from private life, experienced and skilled in private business (including engineering);

(2) two members from private life, experienced and skilled in the science of engineering;

(3) one member who is a commissioned officer of the Corps of Engineers, United States Army (retired); and

(4) one member who is a commissioned officer of the line, United States Navy (retired).

(c) The President shall designate as Chairman of the Board one of the members experienced and skilled in the science of engineering.

(d) The President shall fill each vacancy on the Board in the same manner as the original appointment.

(e) The Board shall cease to exist on that date designated by the President as the date on which its work under this Act is completed.

(f) The Chairman of the Board shall be paid basic pay at the rate provided for level II of the Executive Schedule in section 5313 of title 5, United States Code. The other members of the Board appointed from private life shall be paid basic pay at a per annum rate which is $500 less than the rate of basic pay of the Chairman. The members of the Board who are retired officers of the United States Army and the United States Navy each shall be paid at a rate of basic pay which, when added to his pay as a retired officer, will establish his total rate of pay from the United States at a per annum rate which is $500 less than the rate of basic pay of the Chairman.

(g) The Board shall appoint, without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, a Secretary and such other personnel as may be necessary to carry out its functions and activities and shall fix their rates of basic pay in accordance with chapter 51 and subchapter III of chapter 53 of such title, relating to classification and General Schedule pay rates. The Secretary and other personnel of the Board shall serve at the pleasure of the Board.

SEC. 4. (a) The Board is authorized and directed to study and review all plans and designs for the Third Locks project referred to in section 2(a) of this Act, to make on-the-site studies and inspections of the Third Locks project, and to obtain current information on all phases of planning and construction with respect to such project. The Governor of the Canal Zone shall furnish and make available to the Board at all times current information with respect to such plans, designs, and construction. No construction work shall be commenced at any stage of the Third Locks project unless the plans and designs for such work, and all changes and modifications of such plans and designs, have been submitted by the Governor of the Canal Zone to, and have had the prior approval of, the Board. The Board shall report promptly to the Governor of the Canal Zone the results of its studies and reviews of all plans and designs, including changes and modifications thereof, which have been submitted to the Board by the Governor of the Canal Zone, together with its approval or disapproval thereof, or its recommendations for changes or modifications thereof, and its reasons therefor.

(b) The Board shall submit to the President and to the Congress an annual report covering its activities and functions under this Act and the progress of the work on the Third Locks project and may submit, in its discretion, interim reports to the President and to the Congress with respect to these matters.

SEC. 5. For the purpose of conducting all studies, reviews, inquiries, and investigations deemed necessary by the Board in carrying out its functions and activities under this Act, the Board is authorized to utilize any official reports, documents, data, and papers in the possession of the United States Government and its officials; and the Board is given power to designate and authorize any member, or other personnel, of the Board, to administer oaths and affirmations, subpena witnesses, take evidence, procure information and data, and require the production of any books, papers, or other documents and records which the Board may deem relevant or material to the performance of the functions and activities of the Board. Such attendance of witnesses, and the production of documentary evidence, may be required from any place in the United States, or any territory, or any other area under the control or jurisdiction of the United States, including the Canal Zone.

SEC. 6. In carrying out its functions and activities under this Act, the Board is authorized to obtain the services of experts and consultants or organizations there in accordance with section 3109 of title 5, United States Code, at rates not in excess of $200 per diem.

SEC. 7. Upon request of the Board, the head of any department, agency, or establishment in the executive branch of the Federal Government is authorized to detail, on a reimbursable or nonreimbursable basis, for such period or periods as may be agreed upon by the Board and the head of the department, agency, or establishment concerned, any of the personnel of such department, agency, or establishment to assist the Board in carrying out its functions and activities under this Act.

SEC. 8. The Board may use the United States mails in the same manner and upon the same conditions as other departments and agencies of the United States.

SEC. 9. The Administrator of General Services or the President of the Panama Canal Company, or both, shall provide, on a reimbursable basis, such administrative support services for the Board as the Board may request.

SEC. 10. The Board may make expenditures for travel and subsistence expenses of members and personnel of the Board in accordance with chapter 57 of title 5, United States Code, for rent of quarters at the seat of government and in the Canal Zone, and for such printing and binding as the Board deems necessary to carry out effectively its functions and activities under this Act.

SEC. 11. All expenses of the Board shall be allowed and paid upon the presentation of itemized vouchers therefor approved by the Chairman of the Board or by such other member or employee of the Board as the Chairman may designate.

SEC. 12. There are hereby authorized to be appropriated to the Board each fiscal year such sums as may be necessary to carry out its functions and activities under this Act.

SEC. 13. Any provision of the Act of August 11, 1939 (54 Stat. 1409; Public Numbered 391, Seventy-sixth Congress), or of any other statute, inconsistent with any provision of this Act is superseded, for the purposes of this Act, to the extent of such inconsistency.

NUTRITION PROGRAM FOR THE ELDERLY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. GONZALEZ) is recognized for 15 minutes.

Mr. GONZALEZ. Mr. Speaker, I am introducing legislation today which would provide a nationwide nutrition program for the elderly to be established through Federal grants matched by State and local funding, with utilization of the surplus commodity programs.

The bill, if enacted, would mean that persons 65 years or older could be provided with at least one hot meal per day at a reasonable low-cost to them. The meals would be available at strategically located centers such as community centers, senior citizen centers, schools, and other public or private nonprofit institutions. The senior citizen would, thus, not only be provided with a decent meal but also a chance to be in the companionship of others, thereby, encouraging social contact.

Extensive hearings held by the Select Committee on Nutrition and Human Needs last fall resulted in a strong recommendation of this legislation. The chairman of the committee, the Honorable CLAUDE PEPPER, reported that:

> Among the programs discussed in the hearings were the demonstration projects conducted by the Administration on Aging under title IV—research and development grants, which evidenced not only their desirability, but their feasibility.

Twenty-seven projects established over 17 States in a 3-year period proved to be very successful.

The hearings again pointed to the fact that the elderly person must rely on a fixed-income that continues to shrivel up as the cost-of-living increases. Strict budgets must be followed and for some, food always seems to be the last priority, since the rent, utilities, taxes, and medicines must be paid.

In testimony before the hearings, Mrs. Sandra Howell, project director for the Gerontological Society, described the results of inadequate diet as follows:

> When poor nutrition exists and persists in the older adults, it serves to intensify the severity of other conditions which accompany the processes of aging. By not specifically dealing with the problems of adequate diet in the elderly (we encourage) the spiral of chronic disease, physical and psychic disability, and ultimate institutionalization.

I cannot agree with Mrs. Howell's observation more. It is my hope that full consideration be given this legislation in the light of the need and also of its feasibility as demonstrated by the projects of the Administration on Aging. I am glad to note that there are already more than 55 Congressmen that have joined this bipartisan effort and I trust that we can pool our efforts together for enactment of this bill as soon as possible.

AD HOC CONGRESSIONAL HEARINGS ON DISCRIMINATION IN FEDERAL EMPLOYMENT AND FEDERAL CONTRACTOR EMPLOYMENT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. RYAN) is recognized for 15 minutes.

Mr. RYAN. Mr. Speaker, in December 1968 seven Members of Congress sponsored ad hoc hearings on discrimination in the Federal civil service and by Federal contractors. These ad hoc hearings were convened after the appropriate congressional committees refused to agree to hold hearings on this issue. The seven who sponsored the resulting ad hoc hearings were Mr. CONYERS, Mr. DIGGS, Mr. DOW, Mr. HAWKINS, Mr. HELSTOSKI, Mr. NIX, and myself.

We had hoped that the very fact of holding these hearings would bring sufficient focus to the problem of employment discrimination so that meaningful positive change would result. In part, we were successful. The hearings did bring to bear the scrutiny of an organized group of Congressmen, and they thereby did encourage response.

However, this response in no way sufficiently met the necessities. As the hearings on ad hoc congressional committee established, the equal employment opportunity program within the Federal civil service is very deficient. Its promises have far outstripped its actual results. Similarly, the contract compliance program—the Federal Government's ostensible means to assure equal employment opportunity among the concerns with which it contracts—is very much unsatisfactory.

This persisting lack of an effective equal employment opportunity program within the Federal employment establishment has convinced us that the published report of our hearings will further expose these deficiencies.

Other events, as well, justify publication of these hearings now. Not only do the deficiencies noted then still remain. Opportunity for corrective legislative action will soon be at hand, and hopefully the publication of these hearings will help engender further support for this action, as embodied in H.R. 17555. This bill, which has been reported out of the House Committee on Education and Labor, transfers to the Equal Employment Opportunity Commission authority for the equal employment opportunity program within the Federal civil service. One of the major recommendations of our committee is, in fact, that the Civil Service Commission's supervisory authority over the equal employment opportunity program in the civil service be transferred to another agency.

Moreover, while figures alone cannot give the whole story, they do lead to the compelling conclusion—as does our report—that the transfer which H.R. 17555 proposes of the supervisory authority for the equal employment opportunity program out of the Civil Service Commission is essential. And the just-released Preliminary Report of Minority Group Employment in the Federal Government, 1969, issued by the Civil Service Commission, shows how little real progress has been made. This report presents statistics as of November, 1969; its predecessor report, entitled "Study of Minority Group Employment in the Federal Government, 1967," presented data as of November 1967.

A comparison of the two reports shows the minimal progress made over the 2-year period. Over all, there has been a 20,000-man decline in Federal employment from November 30, 1967, to November 30, 1969—from 2,621,939 down to 2,601,639.

The number of black employees in the general schedule civil service has declined from 390,842 down to 389,251. In terms of percentages, there has been a virtually negligible increase—from 14.9 percent in 1967 up to 15 percent in 1969.

The number of Spanish-surnamed employees has shown somewhat of an increase, from 68,945 in 1967 up to 73,619 in 1969. But this only represents a bare percentage increase, as based on total Federal employment, of just 0.2 percent: Spanish surnamed employees constituted 2.6 percent of the Federal work force in 1967, and they constituted 2.8 percent in 1969.

American Indians and Orientals have experienced no percentage increase, and only negligible increases in absolute numbers. American Indian Federal employees totaled 16,469 in 1967, which equaled 0.6 percent; they totaled 16,478—an increase of 9—in 1969, this equaling the same percentage of 0.6 percent. Oriental Federal employees totaled 20,416 in 1967—0.8 percent. They totaled 21,188 in 1969—again, 0.8 percent.

So, in terms of absolute numbers, the passage of 2 years' time has meant little of benefit to minority group members, so far as employment by the Federal Government is concerned. In terms of percentage distributions, the same conclusion is apparent.

Another aspect of employment in the Federal Government is grade-level distributions. Our report shows very clearly, as do other documents, that minority group members are overwhelmingly represented in the low grades—which means low wages and little or no authority—and overwhelmingly underrepresented in the high grades—which correlate with higher pay and more authority.

And, a comparison of the 1967 and 1969 figures prepared by the Civil Service Commission confirms the continuation of this pattern.

In 1967, 11.6 percent of black Federal employees held GS–5 through 8 positions. In 1969, this percentage figure had only risen to 13 percent. In 1967, 4.3 percent of black Federal employees were employed in GS–9 through 11 jobs; in 1969, the percentage was 5.1. In 1967, only 1.8 of the Federal employees in grade levels 12 through 18 were black; in 1969, the percentage was just 2.25 percent.

The figures for Spanish-surnamed Americans are similar. For GS–5 through 8, the percentages are: 1967—1.9 percent, 1969—2.1 percent. For GS–9 through 11, they are: 1967—1.2 percent, 1969—1.4 percent. And in the grade levels 12 through 18, Spanish-surnamed employees constituted 0.6 percent of the Federal work force in 1967. In 1969, they constituted 0.7 percent.

American Indians show a decline in every grade category. For category GS–1 through 4, down from 1.8 percent to 1.6 percent. For GS–5 through 8, down from 1 percent to 0.7 percent. For GS–9 through 11, down from 0.7 percent to 0.5 percent. And for GS–12 through 18, down from 0.3 percent to 0.2 percent.

The statistics regarding Oriental Americans within the Federal civil service reflect the same distressing picture. In the GS–5 through 8 grouping, there was no percentage change. In the GS–9 through 11 group, the figure rose from 0.9 percent in 1967 to 1 percent in 1969. In the GS–12 through 18 group, the figure rose from 0.7 percent in 1967 to 0.8 percent on 1969.

Thus, in terms of occupying high level positions, the passage of 2 years' time again shows a depressing result.

There are more than 30 million Americans who constitute members of minority groups—Negroes, Spanish-surnamed Americans, American Indians, and Oriental Americans. Yet, in the entire Federal general schedule civil service, as of November 1969, there were, in the three highest grade levels—GS–16 through 18—exactly 97 such Americans. In the highest grade—GS–18—there were seven blacks, two Spanish-surnamed Americans, no American Indians, and two Oriental Americans—a total of 11.

The first part of the report of the Ad Hoc Congressional Hearings on Discrimination in Federal Employment and Federal Contractor Employment concerns the equal employment opportunity program within the Federal Civil Service. I am today including the first part of the report in the CONGRESSIONAL RECORD, on behalf of the Ad Hoc Congressional Committee, composed of Mr. CONYERS, Mr. DIGGS, Mr. DOW, Mr. HAWKINS, Mr. HELSTOSKI, Mr. NIX, and myself. As we stated in the foreword to the report:

We believe this report of the Ad Hoc Congressional Hearings on Discrimination in Federal Employment and Federal Contractor Employment is compelling rebuttal to the rhetoric of action which is, in fact, disguise for inaction. We believe this report starkly presents the failure of the equal employment opportunity program, both within the Federal Civil Service, and as to Federal contractors. We intend this report to penetrate the rhetoric, and to stand as a demand for immediate, effective, meaningful action.

The first part of the report follows:

AD HOC CONGRESSIONAL HEARINGS ON DISCRIMINATION IN FEDERAL EMPLOYMENT AND FEDERAL CONTRACTOR EMPLOYMENT

FOREWORD

Because of the crucial importance of the issue of employment to millions of Americans who have been, and are being, prevented from raising their economic status

and using their talents, we, in 1968, asked a number of Congressional committees to convene formal hearings to study this problem. None—and these included both House and Senate committees—agreed to do so. Consequently, we convened these Ad Hoc Hearings, which were held December 3–5, 1968.

This Report is the result. It presents the testimony of witnesses who have both seen and experienced the discrimination which, tragically, pervades the federal employment establishment—both in the civil service and as to federal contractors.

We would like to thank these witnesses for taking the time to appear in Washington. Some of them incurred serious financial hardship in making the trip, and this is further testimony to their sincerity.

Some testimony has been omitted, some words have been changed to achieve continuity. In no case, however, has the substantive meaning of any witness' presentation been altered. Our recommendations will follow the presentation of testimony.

We believe this Report of the Ad Hoc Congressional Hearings on Discrimination in Federal Employment and Federal Contractor Employment is compelling rebuttal to the rhetoric of action which is, in fact, disguise for inaction. We believe this Report starkly presents the failure of the equal employment opportunity program, both within the federal civil service, and as to federal contractors. We intend this Report to penetrate the rhetoric, and to stand as a demand for immediate, effective, meaningful action.

Ad Hoc Congressional Committee on Discrimination in Federal Employment and Federal Contractor Employment—John Conyers, Jr., Member of Congress, Charles C. Diggs, Jr., Member of Congress, John Dow, former Member of Congress, Augustus Hawkins, Member of Congress, Henry Helstoski, Member of Congress, Robert Nix, Member of Congress, William F. Ryan, Member of Congress.

EQUAL EMPLOYMENT OPPORTUNITY IN THE GOVERNMENT

I. Introduction

Supervision of the equal employment opportunity program within the federal government resides in the Civil Service Commission, whose role is now established by Executive Order 11478, issued by President Nixon on August 8, 1969, and superseding Part I of Executive Order 11246, issued by President Johnson on September 24, 1965.

The most recent complete data on minority group employment in the federal government is that provided in the 1967 report of the Civil Service Commission, entitled "Study of Minority Group Employment in the Federal Government." On September 10, 1970, the Commission issued its "Preliminary Report of Minority Group Employment in Federal Government, 1969." The final report is expected to be published in November, 1970.

An analysis of the 1967 report, which presents data compiled as of November 30, 1967, and the Preliminary Report, which presents data compiled as of November 30, 1969, shows the following comparisons:

(a) There was a total of 2,621,939 full-time federal employees as of November, 1967, and a total of 2,601,639 as of November 30, 1969.

(b) Black employees totaled 390,842 in 1967—14.9%. Black employees totaled 389,251 in 1969—15.0%. In brief, there was virtually no change in terms of percentages, and there was an actual decline in terms of numbers.

(c) Spanish surnamed federal employees totaled 68,945 in 1967—2.6%. They totaled 73,619 in 1969—2.8%. In this instance, there was both a minor percentage increase, and a minor increase in absolute numbers.

(d) American Indian employees totaled 16,469 in 1967—0.6%. They totaled 16,478 in 1969—0.6%. In this instance, there was no percentage change, and only a negligible increase in absolute numbers.

(e) Oriental federal employees totaled 20,416 in 1967—0.8%. They totaled 21,188 in 1966—0.8%. In this instance, there was again a negligible increase in absolute numbers, and no change in terms of percentage.

II. SUMMARY OF TESTIMONY ON MINORITY GROUP EMPLOYMENT IN THE FEDERAL GOVERNMENT

The testimony before the Ad Hoc Congressional Committee concerning minority group employment within the federal government breaks down into essentially four chief areas:

(1) the existence of discrimination, experienced both in terms of individual victization and in terms of patterns of deprivation of opportunity;

(2) the inadequacy and inability of the Civil Service Commission, charged with the responsibility for the rights of federal employees, to conduct and control the equal employment opportunity program;

(3) the bankruptcy, and even negative influence, of the employee grievance procedure in dealing with and rectifying discrimination in hiring, in employment, and in promotion; and

(4) the failure of so-called "affirmative action" to remedy past and present wrongs.

1. The statistics of discrimination

The statistics presented by the witnesses who appeared before the Ad Hoc Congressional Committee make eminently clear that minority group members are under-represented in policy-making positions within the federal establishment, and over-represented in the lower grade levels. Thus, both in terms of authority and salary, minority group members remain second class citizens.

2. The Civil Service Commission

The Civil Service Commission is committed to a merit promotion system, which is ostensibly premised on objectivity and neutrality. For example, the merit promotion system keys advancement to achievement and years of service, pursuant to its aim of precluding promotion on the basis of personal favoritism. Federal law precludes more than one-grade promotions—that is, promotion from a GS–11 to a GS–13, skipping the GS–12 level—and requires certain minimal time within a grade before the employee is eligible for promotion.

While this system has the laudable aim of preventing personal favoritism from outweighing merit, in practice the desired objectivity and neutrality which the civil service system aims at operates against the interests of minority group members.

Since most minority group members are hired in low grade level positions, the likelihood of reaching a high grade and a position of authority is slim. In adidtion, the testing which seeks to select employees without regard to the personal favoritism of their superiors often is marked by a cultural bias inimical to the success of minority group members. Moreover, the very neutrality which aims at protecting employees makes the system unable to adequately cope with, and rectify, the past discrimination which has kept the low grade, but capable, employee in a position incommensurate with his potential. And finally, the qualification standards set for jobs often preclude advancement, yet themselves are misplaced and not keyed to the actual talents and abilities needed for the job.

More important in terms of the government's purported goal of equal employment opportunity is that the Civil Service Commission is, in large part, uncommitted to this goal. While this does not mean that Civil Service Commission employees are men of ill will or are bigots, it does mean that they have no special passion or sensitivity for the problems of minority group members or for the patterns of discrimination which the statistics all too clearly establish.

In part this lack of commitment stems not only from disinterest, but also from the essential ethic of the Commission, which is neutrality. Neutrality is a viable operative concept when its subjects are all alike. But it breaks down in the face of varying educational backgrounds, disparate cultures, and the actual fact of institutionalized discrimination which, while seldom the product of identifiable individuals, is all too often the unarticulated tradition of the system.

Finally, the Commission simply is inadequately staffed to properly implement, conduct, supervise, and review a nation-wide equal employment opportunity program.

The conduct of the program by the Civil Service Commission is, not surprisingly, ineffective at best. At worst, it is harmful. The Commission, even in those completed cases it does review, has hardly ever found discrimination—the statistic quoted by Mr. Michael Ambrose, one of the witnesses and a former Commission employee, is 2 per cent. Further, the Commission has ignored what would appear to be reasonable management techniques by failing to set any goals, or standards, by which agencies can gauge their success or failure. Nor is there any system to reward effective agency programs, or equal opportunity employment officers, who actually are often intimidated—at least implicitly—by the displeasure which their superiors would express were their agencies to be found to be discriminatory.

3. The grievance procedure

The grievance procedure came in for the severest of criticism by the witnesses. In part, its failings follow from the failings of the Civil Service Commission, which, by its quiescence and disinterest, has failed to effectively examine agency actions. But, more basically, the failings of the grievance procedure derive from its conceptual problems and from its implementation within the agencies.

Conceptually, the grievance procedure is misplaced because it is unable to grapple with the pervasive, non-specific discrimination endemic throughout the government. The procedure is premised on an adversarial confrontation between the individual complainant and an agency employee whom he accuses of having discriminated against him.

This framework requires identification of an individual discriminating person, and identification of acts of discrimination. Yet the first requirement ignores the patterns of discrimination—through slow promotion, misdirected testing, restrictive hiring—which perhaps can be blamed on no one person or group of persons. And the latter—identification of acts of discrimination—similarly calls upon a showing of overt acts or events, whereas the discrimination may be far more clearly apprehendable in its consequences—again, the pattern of discrimination shown by the statistics—than in its victimization of any one individual.

Another aspect of this adversarial structure is the fact that the accused agency is the investigating party. Only it can commandeer the personnel statistics over the past years and the other information which may be relevant, beyond the basic alleged acts which the specific complainant points to. Yet, because the agency is in effect being put on trial, it is not working with the complainant to rectify a clearly articulated wrong—discrimination in employment—but against him.

The witnesses recorded other vices in the present procedure, as well. Long delay is typical, for one thing. In addition, the agencies are not really interested in overcoming discrimination. The complainant must pro-

vide his own counsel and the complainant must take the initiative. Particularly in the case of Spanish-speaking employees, this is a significant hurdle because, apart from the psychological disposition to fight which any complainant must possess, the Spanish speaking complainant must overcome the difficulties of language as well. Furthermore, a complainant is labeled as a troublemaker—he may win in the proceeding, but the likelihood of future promotion is minimal.

Finally, the results of these proceedings rarely are in favor of the complainant. While not all employees may have valid complaints, the few findings of discrimination surely cannot be made to jibe with the statistics showing the concentration of minority group members in low level jobs where they earn little money and possess little authority.

On the other side of the coin, several witnesses reported that employees accused of discrimination have been promoted during the pendency of complaints. In brief, there is no system to punish those who have discriminated.

4. Affirmative action

Given the fact that the statistics show a pervasive pattern of discrimination, whereby minority group members are excluded—whether by design or institutionalized tradition—from high grade positions of authority, an affirmative action program should, ideally, seek to reverse and compensate for such pattern, as well as, through the individualized means of grievance procedures, rectify the wrongs done to specific individuals by their employers.

The affirmative action program within the federal employment establishment in no way even brings within sight the ideal. Again, this is in part due to the basic disposition of the Civil Service Commission, to which preferential treatment largely means setting quotas—which are anathema to the Commission—to achieve reverse discrimination.

Again, also, the lack of particular interest by the Commission, and the displeasure which the effective equal employment opportunity officer in a given agency may well incur from his superior, dissuade aggressive action.

Further, the stressing of tests which erect needless and improper obstacles to advancement, and the setting of qualification standards which are not really relevant to the job, yet which bar potential applicants, serve to inhibit affirmative action, rather than abet it.

Finally, there is no means to compensate victims of discrimination—no means to effect retroactive promotions, or to make up for the lost pay a better job would have provided or to recompense for past anguish and frustration.

III. RECOMMENDATIONS OF THE AD HOC CONGRESSIONAL COMMITTEE CONCERNING DISCRIMINATION IN FEDERAL EMPLOYMENT

Given the continuing existence of discrimination in federal employment, and the failure of the present system to rectify this discrimination and to redress the grievances of its victims, it is clear that changes must be instituted—very significant changes which must enable and force effective, meaningful action immediately.

Our recommendations, which largely coincide with those of the witnesses who testified on minority group employment in the federal civil service, follow.

1. Responsibility for the equal employment opportunity program should be lodged in a separate, independent agency, rather than the Civil Service Commission

The Civil Service Commission has failed to even adequately, let alone aggressively, conduct the equal employment opportunity program. Its institutional orientation towards neutrality, its institutional disinterest in combating discrimination, its inadequate staffing, and its numerous other program missions, all militate against its being the suitable body within the federal government to conduct a nationwide, intensive program of this nature.

A separate agency, committed to eradicating patterns of discrimination and to aggressively responding to, and reviewing, individual cases of victimization, is therefore essential. Moreover, the very act of removing the equal employment opportunity program overseer role from the Civil Service Commission will punctuate a commitment on the part of the Federal government to aggressively and forcefully implement Executive Order 11478.

Three potential sites for this program appear feasible. The U.S. Commission on Civil Rights, which is at present an information collecting and investigatory agency without program responsibility for implementing the Executive Order, has demonstrated commendable diligence and competence. Given implementation responsibility, it would be a suitable agency to combat discrimination with in the federal employment establishment.

Similarly, the Equal Employment Opportunity Commission could serve as such an agency. At present, it has no enforcement authority. But, restructured, it too could effectively conduct and supervise the equal employment opportunity program throughout the government.

Finally, a completely new agency could be established. This approach would have the advantage of clearly stating, by the agency's very creation, the federal government's commitment to equal employment opportunity. On the other hand, a new agency would not possess the expertise which the other two agencies have developed. Moreover, pragmatics would seem to indicate that creation of a new agency would be less feasible than modification of the Civil Rights Commission or the Equal Employment Opportunity Commission.

In sum, we recommend that the equal employment opportunity supervisory mission be removed from the jurisdiction of the Civil Service Commission, and lodged in either a modified civil Rights Commission or Equal Employment Opportunity Commission, or a totally new agency.

2. The agency designated to supervise the equal employment opportunity program must be given cease and desist authority

At present, the Equal Employment Opportunity Commission is only authorized under Title VII of the Civil Rights Act of 1964 to use "informal method" to resolve job discrimination complaints falling within its jurisdiction. The Civil Rights Commission has no enforcement authority.

As the Nathan Report, entitled "Jobs and Civil Rights," and published in April, 1969 by the U.S. Commission on Civil Rights, states:

"Cease and desist authority for the EEOC is essential no matter what else is done. The point is not so much that cease and desist authority would be widely used, as that its availability would make it easier to secure compliance and cooperation in every phase of EEOC operations. (pages 66–67).

Proposals have been made repeatedly in Congress to authorize such authority for the EEOC. These include H.R. 6228 and H.R. 17555, both introduced in the 91st Congress. H.R. 17555 has been reported out of the House Committee on Education and Labor, and hopefully will be passed this session.

Strangely, but perhaps not surprisingly, this Administration's appointee to the chairmanship of the EEOC has changed his position from terming cease and desist authority "absolutely essential" during his confirmation testimony after he was appointed in April of 1969, to supporting the Administration EEOC legislation, which does not give the EEOC authority to issue such orders.

Cease and desist authority is essential, whether the federal equal employment opportunity program is lodged in the Civil Rights Commission, the EEOC, or a totally new agency.

3. Whatever agency is to implement the equal employment opportunity program, it must have broad investigatory powers which are regularly and stringently exercised

At present, review of agency practices is largely a post facto exercise by the Civil Service Commission. Moreover, this exercise must usually be initiated by an aggrieved employee's making an appeal to the Commission from an adverse grievance complaint finding. The Commission, or whatever agency replaces it in the equal employment opportunity program supervisory role, should, of its own initiative, undertake periodic, random investigations of federal agencies. In simple terms—a little fear will keep an agency on its toes, so to speak.

4. Goals must be set for desired minority group employment

At present, there is no effective manner for an agency to ascertain how well it is doing in hiring and promoting minority group members. It has no numbers against which to measure its performance. Some rationale—albeit minor—for the agencies' failings thus far lies in the lack of direction which they have received from the Civil Service Commission.

The Civil Service Commission can certainly set goals—ranges of minority group employment for each type of job and each grade level—much as the Office of Federal Contract Compliance of the Department of Labor has done in its Philadelphia Plan, which sets ranges of employment goals for different types of construction jobs in federally financed or assisted construction projects.

5. Special recruitment of minority group members should be undertaken

While some steps have been made in the direction of recruiting minority group members, added emphasis should be placed on recruiting blacks, Mexican-Americans, Puerto Ricans, Indians, Orientals, and women, who, while numerically in the majority in terms of total population, are very much underrepresented both in terms of salary levels and grade levels within the federal government.

6. Special measures should be undertaken in areas populated by Spanish-speaking Americans to utilize Spanish as a second language

Particularly as brought out by one of the witnesses, Mr. Domingo Nick Reyas, the language barrier is a severe impediment to the hiring and advancement of Spanish-speaking Americans and to their utilization of the grievance procedure. Meaningful action must be taken to utilize Spanish, to administer tests in Spanish, and to translate instructions into Spanish.

Moreover, not only will Spanish-speaking employees within the civil service be aided by such action. The federal government, by hiring more Spanish-speaking employees, supervisors, and other officials, will be better able to serve and communicate with those citizens and non-citizens who speak only Spanish.

7. The grievance procedure must be overhauled

The present grievance procedure is a sham. It is almost completely worthless. The procedure process takes far too long, the adversarial nature of the proceeding mistakenly pits the complainant against the very agency which controls his access to essential infor-

mation, and the review process is obviously unsatisfactory.

One of the major functions to be served by lodging authority for supervision of the equal employment opportunity program in another agency other than the Civil Service Commission must be to provide the complainant with an ally equal in institutionalized strength to the agency which he is challenging. Another major function must be to expedite grievance proceedings by establishing meaningful time requirements for action, and by enforcing them.

What we now have, in effect, is a system of a right without a remedy. The lack of the latter makes the former meaningless.

8. Whenever a minority group member is not hired or promoted, an explanation in writing must be made to the superior in charge

Again, a knowledge of someone watching over an employee's shoulder will help to deter discriminatory acts.

9. Those who are found guity of discrimination should be penalized

Testimony revealed that employees charged with discriminatory practices have been promoted during the pendency of complaints filed regarding them. Whether those who have been found to have actually discriminated have been subsequently promoted is unclear.

The employee who, through his discriminatory acts, has deprived another employee of a hiring or promotion opportunity, must be punished. Obviously, firing is the severest penalty, but it should not be foreclosed as one alternative. At the least, an unfavorable notation should be appended to the employee's personnel record, and this should be considered in his own possibilities for promotion, or hiring by another agency. Perhaps the most utilizable penalty would be ineligibility for promotion for a fixed number of years—3 or 4 or 5.

Of course, the same protections afforded the person complaining of having been discriminated against should be afforded the person found guilty of having discriminated. He must have an effective, fair opportunity to dispute the charge and to challenge the finding. Moreover, penalties regarding promotions and hiring should be assessed against those making proven frivolous complaints in an effort to harm or defame another person.

10. Rewards should be set for agency employees who do implement the equal employment opportunity program diligently

At present, the equal employment opportunity officer who performs well receives no reward for doing so. Nor does the supervisory employee who operates a division free from discriminatory practices. Thus, they have little incentive to encourage good performance. In fact, quite the contrary. They run the risk of incurring the displeasure of their superiors if the agency is labeled, by the successful complaints of its employees, as discriminatory. Merit awards should be established to take proper note of diligent, affiirmative action.

11. Retroactive promotions should be extended to those who have been held back because they were victimizezd by discrimiation

The problem of retroactive promotions is one of the most difficult which the Ad Hoc Committee faced. Theoretically, every minority group member would be eligible for such promotion, since the statistics show patterns of discrimination which have affected every such person. To limit retroactive promotions to just those persons who can win their case in a grievance proceeding is to ignore these patterns.

On the other hand, to suddenly promote hundreds of thousands of employees would be to ump them over the heads of hundreds of thousands of other diligent, deserving white employees.

At the least, retroactive promotion should be extended to the successful grievance proceeding complainant. While promotion may not be feasible en masse for all minority group employees, immediate increases in salary should be made as monetary compensation for the past discrimination these employees have suffered.

12. Affirmative steps should be taken to assure extensive minority group employment in expanding fields

Two witnesses noted the failure to hire minority group members in the computer field—an expanding area offering good opportunity for advancement. Added effort should be undertaken to recruit minority group members for such fields.

Under the present circumstances, those have suffered from discrimination by being hired, and retained, in low level jobs, have little opportunity for advancement in large, old-line agencies having few high positions and many potential personnel to fill them. It is essential that, in addition to other measures, immediate steps be taken to assure that minority group members are not excluded from new agencies, new programs, and new fields of endeavor.

13. Testing and qualification standards must be modified

While some progress has been made in adjusting testing and qualifications to the needs of the job, much has yet to be done. Clearly, competence in grammar is desirable, in the abstract, but it may not be needed—it may even be a detriment—for the GS–11 employee in the training and technical assistance division of the Office of Economic Opportunity, whose job is to assist local community action groups in the ghetto. Moreover, failure to pass a test may well be an irrelevant index of a person's ability to handle a job, especially when that person has relevant experience.

Reliance on non-validated testing, and reliance on unnecessary job description requirements, do much to impede, and often they are totally misplaced. The Civil Service Commission must develop legitimate, realistic tests and qualification requirements.

14. Equal employment opportunity program staffing must be expanded

At present, one of the simple logistical problems in effectively operating the equal employment opportunity program lies in the lack of sufficient personnel. The testimony of one of the witnesses, Mr. Michael Ambrose, for example, revealed that there were only two professionals at the Civil Service Commission to monitor the entire federal program. And every agency needs added personnel to operate its own in-agency program. Consequently, it is essential that greatly expanded staffing for the equal opportunity office of each agency be undertaken. Furthermore, the supervisory agency—whether the Civil Service Commission or one such as we propose—must have an adequate staff.

15. Data collection and publication of data must be expedited and expanded

Under the present grievance procedure system, the agency charged with discriminatory practices investigates the very complaints made against it. It alone has full access to the records showing internal patterns of discrimination—data which may well be very relevant to the complainant's case. This system should be changed so as to require every agency to periodically—every three or four months—collate its data and make it fully and readily accessible to the public and to its employees.

THE 100TH ANNIVERSARY OF THE EULOGY TO AN IMMORTAL DOG, OLD DRUM

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Missouri (Mr. RANDALL) is recognized for 30 minutes.

Mr. RANDALL. Mr. Speaker, it is my privilege and honor to represent Johnson County, Mo. The county seat of that county is Warrensburg, Mo., which is the home of Central Missouri State College. However, it is not because of the location of the college, but because it was the scene of the trial which included the immortal "Eulogy to a Dog," by Senator George Graham Vest, that has brought the most widespread fame to Warrensburg and Johnson County.

The final trial of Burden against Hornsby was held at Warrensburg on September 23, 1870. That trial was reenacted under the sponsorship of the Johnson County Historical Society in two performances each day on Saturday, September 12, 1970, and Sunday, September 13, 1970, at the old courthouse at 306 North Main in Warrensburg, Mo., in the same building where the trial took place 100 years ago.

It was my pleasure to witness portions of the last performance on last Sunday afternoon. It was something I shall never forget. The part of Senator George Graham Vest, attorney for the plaintiff, George Burden, was ably played by Gayles Pine. Plaintiff Burden was played by George Mitchell. T. T. Crittenden, attorney for the defendant, Leonidas Hornsby, was played by Robert G. Russell. The part of the defendant, Mr. Hornsby, was played by Charles Fitzgerald. Young Dick Ferguson was played by John Hart and the part of Mr. Harley was played by Stanley Braton, the present prosecuting attorney of Johnson County, Mo. Sitting on the bench was the Honorable David J. Dixon, who at the present time is circuit judge for the circuit which embraces Johnson and Cass Counties, Mo., while the part of the bailiff of the court was played by Frank M. Patterson.

"Drum" as the reenactment was named, was under the capable direction of Dr. Glenn W. Pierce, and staged under the general sponsorship of the Johnson County Historical Society, Dr. A. L. Stevenson, president. The costumes were faithful replicas of the clothing worn 100 years ago and the makeup prepared by the production staff was excellent. Each of the four showings of the reenactment was well attended.

As I prepared these remarks I found I soon became indebted to Icie F. Johnson, author of the "Old Drum Story," a book published in 1957 by the Warrensburg, Mo., Chamber of Commerce. In her foreword, Mrs. Johnson points out historical events too often become mere folk tales when their facts remain unrecorded. She goes on to point out that some of the articles written about the trial of Burden against Hornsby are not really factual, but somewhat imaginative. However, it was Mrs. Johnson who carefully combed the court records of the trial and has

come up with what is generally accepted as dependable material. The possible exception is "The Lost Speech" itself which is the description as signed by many to Senator Vest's speech to the jury, generally known as "A Tribute To a Dog." The trial of Burden-Hornsby was a long and involved legal battle. Actually, there were three trials that preceded the final one on September 23, 1870.

The plaintiff and the defendant in this case were neighbors and brothers-in-law who lived on adjoining farms. There had never been any feud between the two men. It was nothing more than Burden's love for his favorite hound dog that fired his anger and personal determination to secure justice over the death of his dog, Drum.

The record shows that Charles Burden was the owner of a beloved hound, named "Drum." He last saw his dog on October 28, 1869. At the trial he said he heard the fire of a gun from the direction of Mr. Hornsby's and he immediately became fearful his dog had been killed. When he called, Drum did not come. Hornsby denied that he had shot any dog. A young boy raised by Leonidas Hornsby did admit he had shot a dog with a gun loaded with corn, and Hornsby reluctantly testified from the witness' stand that he had urged young Ferguson to load the gun with corn so it would not hurt the dog too much. He did admit that the boy shot at a "black-looking" dog that "hollowed" like a hound dog. After the dog was hit, he said, he saw him jump over a fence and he did not "hollow" any more. Hornsby complained that dogs had killed about 100 of his sheep, but steadfastly denied that he had killed old Drum or dragged the body of the dog down to the creek. He did admit he had driven old Drum away from his farm with rocks. None of this story was enough to quiet Charles Burden, who insisted that, if he ever found out who had killed his dog, he would take it out of his hide. Burden said he loved his dog so much he would not have taken $150 for him. He described the dog as an experienced hunter. He said he was good on varmints and wolves. Burden claimed Drum was a good deer dog and, in conclusion, testified no amount of money could buy him.

The story of the trial is long and involved. At one of the earlier trials, Burden had a firm of lawyers, Elliott & Blodgett, but lost the case. Then he went to Sedalia to secure more legal aid from George Graham Vest, a man who later became U.S. Senator from Missouri. The defendant, Hornsby, was represented by T. T. Crittenden, who later became Governor of Missouri, and his partner, Francis M. Cockrell, who later became a U.S. Senator.

The courtroom contained quite an array of legal talent. Every lawyer on both sides of the controversy were good lawyers. Each won great distinction for himself in later years. The trial lasted all one rainy day and well into a stormy fall night. When it was ended, the plaintiff, Burden, heard jury foreman, W. O. Ming, read the verdict of the jury:

We the jury find for the plaintiff and assess his damages at $50.

Four days later there was a motion for a new trial filed, but overruled by the court. An appeal was made to the Supreme Court which upheld the verdict of the court of common pleas, which was the trial court in this case. It is interesting to note that in the margin opposite the verdict in the court records at Warrensburg is written:

This judgment paid in full this 18th day of September 1872.

When all was said and done the one thing that made the trial an historical event was Senator Vest's "Eulogy to a Dog," which was his final speech to the jury in that crowded courtroom in September of 1870. Even before then, Mr. Vest had been known as a formidable lawyer and an outstanding orator. He was not some unknown young, inexperienced lawyer. He had already served in the Missouri House of Representatives before the war. During the Civil War, he was a representative of Missouri in the Confederate Congress. Although a native of Kentucky, he had started for California after graduation from law school. On the way, he was involved in a stagecoach accident in which he suffered a broken arm near the village of Georgetown, Mo., a few miles north of Sedalia, Mo. While recuperating there, he defended a Negro boy accused of murdering a white woman. In the trial the boy was cleared, but the people refused to accept the verdict and the boy was publicly lynched. Shortly thereafer, George Graham Vest was threatened for defending this young slave and told to leave town. But Vest was so stubborn his answer to the mob was to stay in town, and to put out his shingle for the practice of law in Georgetown, Mo.

George Vest stood only about 5 feet 6 inches tall but observers say he seemed taller when he appeared before a jury. It is said he rammed his hands deep in his pockets as he talked, but he possessed an eloquence that would charm either the judge or a jury. He was not only an entertaining speaker, but a forceful speaker. He was possessed of a knowledge of literature and history which provided him a background few men possess.

The actual content of the "Eulogy to a Dog" has been described as "The Lost Speech" because there was no stenographer there on that night in 1870 to take down the emotionally inflamed words of the orator-lawyer, Mr. Vest. Less than 400 words are contained in the final portion of the appeal Vest gave to the jury, although he spent more than 1 hour presenting all of his arguments in the case. In his final 400 words he walked over to the jury and reminded everyone in the courtroom of the dogs they had that had been faithful, never mentioning the name of Drum. So powerful was the speech that most of the people had misty eyes.

There are several different versions of how the lost speech has been reconstituted. The first is that counsel for the defense, T. T. Crittenden, at the end of his term as Governor of Missouri recited Vest's speech from memory to the Kansas City newspapers. The second version is that Prof. William Lyon Phelps, who wrote a column for the New York Evening Post had been told the story of Vest's speech by Henry Wollman, a prominent New York lawyer who had practiced before in Kansas City and who was so impressed with the speech "he remembered every word." The third version, that is said to have led to the first printing of the eulogy, is that the Warrensburg newspaper actually printed the content of the speech the day after the trial. This has not been found to be true following a search of the files for that day, as checked by the Missouri Historical Review. The fourth idea about the printing of the speech proves once again that there was no one on the night of the trial, that wrote down the exact words. Judge M. D. Aber of Warrensburg supports this theory and points out that about 1890, John Montgomery, a lawyer in Sedalia, got together with Senator Vest and reconstructed as best they could the words of that part of the jury talk paying tribute to the fidelity of the dog. All agree this is not a rescript of what was said that rainy night but is probably the most acceptable of the four different versions about how the lost speech was finally reduced to writing.

Before I preserve in the CONGRESSIONAL RECORD Senator Vest's eulogy to Old Drum, I will take a moment to make reference to portions of an editorial written by the editor of the Warrensburg Daily Star Journal, Mrs. Avis Tucker. Reference is made in that editorial to the efforts of the chamber of commerce to secure the issuance of a commemorative stamp to honor the 100th anniversary of the renowned eulogy. Along with Senator SYMINGTON, as the Congressman representing Johnson County, I urged Postmaster General Blount to issue an Old Drum stamp, because I thought it would be an appropriate tribute not only to Old Drum but to all the millions of faithful dogs.

Mrs. Tucker's editorial quite interestingly points out that the story of the trial and the words of the tribute by Senator George Graham Vest have been reprinted all over the world. She notes that the Daily Star Journal recently received a letter from an elementary school class in Japan asking for reprints of the story of Old Drum.

The Star Journal points out that in 1956, nationwide publicity was given to the plan of the Warrensburg Chamber of Commerce to erect a memorial to Old Drum. Donations poured in from everywhere in denominations of a few pennies from children to $500 from President Harry S. Truman. A St. Louis sculptor, Reno Gastaldi, made the handsome bronze statue which now stands on the courthouse lawn. Several thousand people attended that dedication on September 27, 1958, and which turned out to be one of the most outstanding events that has ever taken place in Warrensburg.

Old Drum has been written up in books, newspapers, and magazines all over the world. There is almost unending evidence of the extensiveness of Old Drum's fame. Certainly it is far and wide. Certainly it is Old Drum and the immortal eulogy to that dog by Senator Vest that has brought Warrensburg, Mo., its most widespread fame.

George Graham Vest made himself famous with his classic piece of oratory

about faithful dogs. Old Drum was to Charlie Burden a true friend and devoted companion. Every word that Senator Vest uttered to the jury was eloquent and true. The Senator's words not only won the case for his client, but have won the hearts of countless thousands who have come to remember his speech as one of the literary gems of American history.

People who love dogs know that Senator Vest was speaking for all faithful dogs who for centuries have been a part of man's life.

While the statue of Old Drum is a beautiful piece of bronze, Drum himself was an outstanding hunting dog, most valuable to his master. It was unfortunate that he had to die to become a hero. But he was survived by a master with the unusual courage and determination to win satisfaction for this death.

Moreover, Drum would never have become famous were it not for the eloquence of one of Missouri's most able attorney-orators. All of these things warranted the statue which immortalizes Drum today on the lawn of the Johnson County Courthouse. I am sure Drum would be the first one, if he were able to talk, to agree that the memorial statue not only honors himself but all noble and faithful dogs who have been unselfish friends to their masters.

Mr. Speaker, it is a high honor and a great privilege on this 100th anniversary of the trial of Burden against Hornsby to incorporate for preservation in the CONGRESSIONAL RECORD, and in the Archives of the United States, Senator Vest's immortal speech to the jury in tribute to Old Drum, which while once lost has been put together again in words as follows:

"EULOGY TO A DOG"

(By George Graham Vest)

Gentlemen of the Jury: The best friend a man has in this world may turn against him and become his enemy. His son or daughter that he has reared with loving care may prove ungrateful. Those who are nearest and dearest to us, those whom we trust with our happiness and our good name, may become traitors to their faith. The money that a man has, he may lose. It flies away from him, perhaps when he needs it the most. A man's reputation may be sacrificed in a moment of ill-considered action. The people who are prone to fall on their knees to do us honor when success is with us may be the first to throw the stone of malice when failure settles its cloud upon our heads. The one absolutely unselfish friend that a man can have in this selfish world, the one that never deserts him and the one that never proves ungrateful or treacherous is his dog.

Gentlemen of the Jury, a man's dog stands by him in prosperity and in poverty, in health and in sickness. He will sleep on the cold ground, where the wintry winds blow and the snow drives fiercely, if only he may be near his master's side. He will kiss the hand that has no food to offer, he will lick the wounds and sores that come in encounters with the roughness of the world. He guards the sleep of his pauper master as if he were a prince. When all other friends desert, he remains. When riches take wings and reputation falls to pieces, he is as constant in his love as the sun in its journey through the heavens. If fortune drives the master forth an outcast in the world, friendless and homeless, the faithful dog asks no higher privilege than that of accompanying him to guard against danger, to fight against his enemies, and when the last scene of all comes, and death takes the master in its embrace and his body is laid away in the cold ground, no matter if all other friends pursue their way, there by his graveside will the noble dog be found, his head between his paws, his eyes sad but open in alert watchfulness, faithful and true even to death."

THE SST—HISSING THE VILLAIN?

(Mr. CLEVELAND asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. CLEVELAND. Mr. Speaker, one of the subjects of wide debate in recent years is the SST, which is both acclaimed as a vital technological breakthrough which the United States must achieve, and criticized as a misguided use of money without consideration of environmental impact. There is certainly some truth on each side of the issue.

In the September 1 issue of Forbes magazine, Malcolm S. Forbes states the issue concisely in his "Fact and Comment" column. He is to be commended for doing so without including either the more dramatic rhetoric of the ardent environmentalists or the predictions of technological lag of the supporters of the project.

It is regrettable that the issue of Federal funds for the SST has never come squarely before the House for a record vote. It is an important issue which in our democratic system should be resolved in public by a recorded vote of the elected representatives of the people. The absence of a record vote on this issue has at least contributed to one good result, the adoption of the Gubser-O'Neill—record teller vote—amendment to the legislative reorganization bill now being considered by the House.

Had the question of further Federal assistance to the SST come before the House for a record vote, I would have voted against further expenditure for this plane. My reason for this position is one of priorities, and is well summarized by Malcolm Forbes:

Being able to cross oceans—at fantastic cost—quicker than you can now reach airports from home and office is simply an asinine assignment of priorities.

Even if concerns of possible damage to the environment are vastly overstated—and that is questionable—this expenditure is just not one of the most pressing needs for our limited Federal dollars. We have domestic needs which are simply more important, such as water and air pollution abatement programs, mass transit facilities for our urban areas, an all-volunteer armed forces, better care for our elderly citizens. The list is very long and these are but a few of our high priority needs, all of which are of course subject to our continuing need to maintain a fully credible defense posture as a deterrent to aggression.

The editorial follows:

HISSING THE VILLAIN

If you try pronouncing SST it comes out as a sort of cross between a hiss and an attention-getting psst. The SuperSonic Transport for which the initials stand is getting an increasing amount of both.

It's been a while since a Prince of Wales has made any public noises of particular relevance to this longago Colony, but Prince Charles, sounding every bit his father's son, recently made his observation to England on the touchy French-English SST, Concorde:

"Sometimes I think I would like to go in it. But then, if it is going to pollute us with noise, if it is going to knock down churches or shatter priceless windows when it tests its sonic booms—is this what we really want?

"This is one of the technological achievements which could do harm. What sort of price are we prepared to pay for this sort of advance?"

Being able to cross oceans—at fantastic cost—quicker than you can now reach airports from home and office is simply an asinine assignment of priorities.

HEARINGS ON NUTRITIONAL PROGRAMS FOR OLDER AMERICANS

(Mr. BRADEMAS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BRADEMAS. Mr. Speaker, I take this time to announce that the Select Education Subcommittee will, this week, continue hearings here on legislation introduced by my distinguished colleague from Florida, CLAUDE PEPPER and cosponsored by close to 100 Members on both sides of the aisle, designed to provide incentive to the States for providing low cost, nutritionally sound means for the elderly.

Our next hearings open on Wednesday, September 16, and continue on Thursday, September 17, and Thursday, September 24, all in room 2175 of the Rayburn House Office Building.

Mr. Speaker, the following is a list of witnesses:

WEDNESDAY, SEPTEMBER 16, 9:45 A.M.

Hon. CLAUDE PEPPER, Member of Congress, Florida.

Hon. BERTRAM L. PODELL, Member of Congress, New York.

Peter Hughes, legislative representative, National Retired Teachers Association, American Association of Retired Persons; accompanied by Robert Sykes, legislative representative, National Retired Teachers Association, American Association of Retired Persons.

Conrad J. Vuocolo, director of tenant services, housing authority, Jersey City, N.J.

Peggy Sheeler, Meals on Wheels, Inc., Baltimore, Md.

THURSDAY, SEPTEMBER 17, 9:45 A.M.

Dr. William Bechill, assistant professor, University of Maryland School of Social Work and Community.

William R. Hutton, executive director, National Council of Senior Citizens.

Sandra Howells, project director, Gerontological Society.

THURSDAY, SEPTEMBER 24, 9:45 A.M.

John B. Martin, Commissioner, Administration on Aging, special assistant to the President.

Stephen P. Simonds, Commissioner, Community Services Administration, Social and Rehabilitation Service.

Richard Lyng, Assistant Secretary of

Agriculture, Consumer and Marketing Services, Department of Agriculture.

Dr. Thomas Bryant, Assistant Director of Health Affairs, Office of Economic Opportunity.

PROTECTING POLICEMEN AND FIREMEN

(Mr. HECHLER of West Virginia asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HECHLER of West Virginia. Mr. Speaker, people throughout the Nation have been deeply disturbed by the senseless shooting and harassment of policemen and firemen in the line of duty. These dedicated public servants are working to protect all of us, and when they are attacked, it is an attack on everyone and society suffers.

The fatal shooting of policemen which occurred recently have made it obvious that additional measures are necessary for the protection of these public servants. I have therefore introduced H.R. 19138 making the murder of a policeman or a fireman a Federal crime, thus enabling the FBI to enter the case. This is a companion bill to that sponsored by Senator HARRISON WILLIAMS, Democrat of New Jersey.

The text of the bill follows:

H.R. 19138

A bill to prohibit flight in interstate or foreign commerce to avoid prosecution for the killing of a policeman or fireman

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) chapter 49, title 18, United States Code, is amended by adding at the end thereof the following new section:

"§ 1075. Flight to avoid prosecution for the killing of a policeman or fireman

"(a) Whoever moves or travels in interstate or foreign commerce to avoid prosecution, custody, or confinement after conviction, under the laws of the place from which he flees, for willfully killing a police officer or fireman while such police officer or fireman was engaged in the performance of official duty shall be fined not more than $5,000, or imprisoned not more than five years, or both.

"(b) Whenever a police officer or fireman is willfully killed, while such policeman or fireman is engaged in the performance of his official duties, and no person alleged to have committed such offense has been apprehended and taken into custody within twenty-four hours after the commission of such offense, it shall be presumed in the absence of proof to the contrary that the person who committed such offense has moved or traveled in interstate or foreign commerce to avoid prosecution or custody under the laws of the place at which the offense was committed.

"(c) This section shall not be construed to evidence an intent on the part of the Congress to prevent the exercise by any State of jurisdiction over any offense with respect to which such State would have had jurisdiction if this section had not been enacted by the Congress.

"(d) As used in this section—

"(1) the term 'police officer' means any officer or employee of any State who is charged with the enforcement of any criminal laws of such State;

"(2) the term 'fireman' means any person serving as a member of a fire protective service organized and administered by a State or a volunteer fire protective service organized and administered under the laws of a State; and

"(3) the term 'State' means any State of the United States, the Commonwealth of Puerto Rico, any political subdivision of any such State or Commonwealth, the District of Columbia, and any territory or possession of the United States.".

(b) The section analysis of chapter 49, title 18, United States Code, is amended by adding at the end thereof the following new item:

"1075. Flight to avoid prosecution for the killing of a policeman or fireman.".

THE NEW HOPE CENTER IN KEENE, N.H.—THE FULFILLMENT OF A DREAM

(Mr. CLEVELAND asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. CLEVELAND. Mr. Speaker, I have long been personally interested in the problems of our handicapped citizens. Mostly as the result of this interest I became a trustee of the New Hope Center in Keene, N.H., a school for the handicapped. The growth of this center has been remarkable, and has justified the name "New Hope" which it has borne.

This center contrasts so vividly with the massive, grandiose Government programs which we in Congress are asked to establish and fund. Here in Washington we are told that the answer to all of our problems is to allocate lots of money, and the problems will be instantly solved and, even better, go away.

The New Hope Center, however, shows us that this is not the only or even the best approach, for it has always operated on a shoestring budget—and the director of the center, my friend Jim Haddock, might add that there often seemed to be no shoes to go with the shoestring. Though money it lacking, the center did have interested people behind the project, dedicated volunteers and staff, imaginative leaders, and most important people who loved children and wanted to help them.

With these assets the center has grown to maturity and relative security, with its entire budget for the coming year already pledged or in the bank. This security is proof of the good work of the project, for unless people were enthusiastic about its work they would not have donated money or time.

Perhaps as the result of this background, the New Hope Center continues to show the creativity lacking in so many of our well-financed schools. This summer, for example, the center had its first summer session, in which the goal was to get handicapped teenagers to become involved in work projects: gardening, handicrafts, and domestic cleaning. These young people have been working with their hands, accomplishing something with sale value in the community, and having a chance to interact with people in the community. Not dramatic in the Washington world of billion-dollar solutions, perhaps, but to the handicapped teenagers involved it is very dramatic to be doing the things other young people are doing.

Mr. Speaker, at the first annual meeting of the New Hope Center, Jim Haddock gave a short but very eloquent speech telling where the center is coming from and where it is going. Jim has been a dynamic, creative director of the New Hope Center, and the speech which he gave on that day demonstrates why the New Hope Center is the success which it is. It has been an honor of mine to serve as trustee of the center, and to know Jim Haddock and all of the other fine people who have made this a success, and who have helped so many young people to realize their own potential.

The speech follows:

THE NEW HOPE CENTER, FIRST ANNUAL MEETING, MAY 24, 1970

Distinguished guests, staff, members of the board, children, parents, and friends: I welcome you and thank you for coming here this afternoon. We are here to bear witness to a dream—not my dream or your dream—but our dream.

The New Hope Center is today a reality born of the dreams of many—dreams of hope—hope for tomorrow—nurtured and birthed by the Cheshire County Association for Retarded Children. The New Hope Center spent a brief childhood in the cramped quarters of a church. Dollar poor and pennyless the program began with a staff of one, thankful for the space and the chance.

Two years ago we moved to this building leased to us for a nominal fee by the public school system.

Here we entered our adolescence, gangly and gauche, with multiple spurts of awkward growth. Our enrollment has doubled as has our staff. We have incorporated on our own. So with bandy legs we stand. Maturing is never easy—we have tried to learn from our errors, stand a bit straighter and go on.

Look not to yesterday, it is history—learn, oh yes, learn from it, but look to now and tomorrow which can still be shaped and molded—look to fulfillment of that dream of hope for our center; yes, *our* Center.

This year has been a year of growth and change as we struggle to come of age. We have raised our budget for this year in advance. We have a crew of teenagers who work in the community doing domestic cleaning. We have planted a garden with the hope of selling produce; we have manufactured and sold products. We are a staff of devoted, capable teachers trying to grow with our students.

Others have helped: A team of volunteers has always been ready to tackle any task. If I were to list our volunteers we would stand here all day and even then I would undoubtedly miss a few so I thank you all as a group—those who cook our meals; those who clean our building; those who daily drive children to the center; those who work directly with children; and those who raise money and those who give money; the county legislators and those who call legislators on our behalf; above all, those who love us and speak well of us in the community.

The dream is alive and growing. The dream is coming of age—true maturity lies on the path ahead and we are moving swiftly towards it. I see next year surpassing this and again the same the next.

We have a dream—the dream is the dream of hope—New Hope, New Hope—New Horizons.

NECESSARY LEGISLATIVE PROGRAM FOR REMAINDER OF THIS SESSION

(Mr. GERALD R. FORD asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. GERALD R. FORD. Mr. Speaker, time is running out on the second session of the 91st Congress, and yet the record of this Congress in the past 8½ months can be described as little better than a mixed bag.

I recently remarked that passage of the Postal Reform Act of 1970 would go down as one of the 91st Congress' finest achievements. I meant every word of that observation. Today I must sadly add that postal reform will stand as the single outstanding achievement of the 91st Congress' second session unless the Congress responds immediately to the President's September 11 call for action.

The time is ripe for reform. We have fulfilled that promise to a degree but much of the field remains unplowed. The soil is fertile and the President has supplied the seed ideas. Let us in the Congress get about the business of producing a crop of reforms which will make government truly effective in America.

Apart from basic reforms listed by the President, much legislative business lies ahead of the 91st Congress. Let us accept and act quickly on the President's challenge to strengthen our anti-crime laws, clean up the environment, consolidate our manpower training programs and control drug abuse.

An election is coming up. But let every Member of Congress remember that the best politics is to legislate in the best interests of the American people. Obstructionism has never paid off at the polls—and the people know who the obstructionists are. Let us join hands to move America forward. So little time remains in this session.

Mr. POFF. Mr. Speaker, it is disappointing that some of our colleagues have reacted to the President's message last Friday in a partisan manner. I have carefully read this document and it appears to me that the President has not indicted any person or political party.

In fact, he said:

> More is at stake than the reputation of one political party or another for legislative wisdom or political courage. What is at stake is the good repute of American government at a time when the charge is that our system cannot work hurled with fury and anger by men whose greatest fear is that it will.

I would submit to my colleagues that this is precisely the challenge before Congress—to prove that we can provide leadership, that we can reform the institutions of American government to meet the new needs of the modern world. It would be a tragic mistake for the Congress to ignore that challenge.

The President has sent his legislative proposals to the Congress. While they cover a wide range of issues, there is a factor common to each of these proposals—that is, each is designed to respond to demonstrated needs. We may not all agree that the President's method of meeting these needs is the best way in each case; but, the needs must be met.

The task now before Congress is to get on with the business of reform. As the President said, "Matters press, we cannot wait for politics."

Mr. TAFT. Mr. Speaker, one passage in the President's Friday message to the Congress is particularly interesting, and I would like to repeat it. I quote:

> Our present problems in large degree arise from the failure to anticipate the consequences of our past successes. It is the fundamental thrust of technological change to change society as well. The fundamental task of government in the era now past was to somehow keep abreast of such change, and respond to it. The task of government in the future will be to anticipate change: to prevent it where clearly nothing is to be gained; to prepare for it when on balance the effects are to be desired; above all to build into the technology an increasing degree of understanding of its impact on human society.

I would submit that this is an apt and perceptive statement of the challenge that now faces Congress. Our task is to anticipate change, yet the Congress to a large degree has not done this.

During the past year, the President has sent to the Congress a package of legislation which cuts across a wide spectrum of social issues. Some of this legislation is responsive to long-overdue needs. Other bills such as the Revenue Sharing Act and the Manpower Training Act, are those that anticipate change.

Mr. ARENDS. Mr. Speaker, in his message to the Congress last Friday, President Nixon accurately pointed out the need for reform in our society. Unfortunately, that message will serve little purpose if it is ignored by the Congress.

Some of our Democratic colleagues have already attempted to dismiss that message as a political ploy. If they are successful then that message will become just another piece of paper sent to the Congress and forgotten in the course of a week. But the losers will not be the Republicans or the President; the losers will be the American people.

Mr. Speaker, the President's call for an era of reform reserves a better fate. No Member of this body can doubt that we live in an age of unrest. I do not refer to the radical fringe elements of either side of the political spectrum. They will probably always exist, picking away at the structure of American society. Rather, I refer to the unrest which is felt today by the average Americans.

They are uneasy. When they look around they see that their institutions are not working quite the way they should. They see unchecked pollution, unchecked crime and violence, unsolved problems of all kinds. In many ways, in the last decade, they have been let down by their Government because it has not been able to change, to reform, to address itself to contemporary life.

The President has sent to the Congress a legislative program which is designed to provide the necessary reforms. Mr. Speaker, Congress must not dismiss that program as partisan politics or business as usual. That just is not good enough in today's world.

Mr. SMITH of California. Mr. Speaker, in his call for cooperation to the Congress last Friday, the President stated—quite accurately, I believe—

> The most neglected and the most rapidly deteriorating aspect of our national life is the environment in which we live.

The President has recognized the crisis of our environment, and he has taken steps to meet that challenge. He has established the Council on Environmental Quality and has asked Congress to approve a reorganization plan which would establish an Environmental Protection Agency and a National Oceanic and Atmospheric Administration. These new institutions should provide the mechanisms necessary to fight back against pollution which assaults the American citizen from all sides.

But regulatory agencies are not enough. We must have new laws in this field, and the President has proposed what he frankly terms, "the most comprehensive and costly program of environmental control in the history of the Nation."

GENERAL LEAVE TO EXTEND

Mr. GERALD R. FORD. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days to extend their remarks with reference to the message sent to the Congress on the administration's program and call for cooperation by the Congress.

The SPEAKER pro tempore. Without objection, it is so ordered.

There was no objection.

THE GUERRILLA HIJACKINGS

(Mr. PODELL asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. PODELL. Mr. Speaker, the boundaries between international law and international anarchy have faded. Human life has become but a pawn in the struggle for violent and irrational ends. Technology, once thought to be a liberating force, victimizes. Nations thought to be powerful seem impotent before the onslaught of events. Many traditional assumptions and distinctions have been rendered all but meaningless in the context of the Arab guerrilla hijackings.

Outrage and basic disbelief have been joined in the minds of so many spectators. The hijackings seem beclouded by an air of unreality, and yet they are all too real. Fifty people are still help captive.

These outrages on human life are the product of a situation that nurtured their existence. Fed and educated in hate and destruction, tolerated when they should have been punished, applauded when they should have been vilified, the Arab guerrillas have become a threat to the international order. Even their erstwhile protectors are in danger.

Their erstwhile protectors, the Arab Nations, are now disclaiming any responsibility for the hijackings. Yet the fact of the matter is that they share a large portion of the blame. They are the ones who nurtured the guerrillas. It is their teachings that provided the spark that set off these series of international explosions. Their political stand left the Arab refugees stranded on the west bank with no home except refugee camps. Finally, it is the Arab States who supplied the guerrillas with the arms that they have used to terrorize innocent victims.

The history of the Palestinian refu-

gees demonstrates how far Arab responsibility stretches. When the State of Israel was created in 1948, she urged all Arabs living in the territory to remain. Israel promised them equal rights and a fair share in Israel's future. Approximately 175,000 Arabs—a bit more than one in five of all Arabs then living in Israeli territory—did stay in Israel. The Arabs who did remain now have a standard of living higher than the people in any Arab nation. They are in one sense of the word refugees.

But approximately 575,000 Arabs did leave what was to be Israeli territory. They were not forced out by the Israelis. On the contrary, there are records of broadcasts, leaflets, and official pronouncements urging each Arab to stay. But Arab leaders, the Grand Mufti in particular, urged all Arabs to leave Israel. The Mufti promised that the Arab armies would destroy the Jewish populace within 3 months. When Israel had been vanquished, the Palestinian Arabs were promised their land back. The majority of the Palestinian Arabs heeded the advice of the leaders and left Israel. Israel won the war, and the refugees were left on the west bank.

Documentation supporting these facts is overwhelming and conclusive. The Jordanian newspaper, ad-Difaa, summing up the events of 1948 said:

> We were masters of our land, happy with our lot . . . but overnight everything changed. The Arab governments told us, "Get out so that we can get in." So we got out, but they (the Arab governments) did not get in.

Two facts are made clear by the history recounted above. First, it is obvious that the Palestinians became refugees because they were prodded and threatened by Arab leaders. Motivated by their threats, the Palestinians left Israel voluntarily.

Second, when their initial promise of victory failed, the Arab Nations deliberately built their own fences around the refugee by refusing to let them resettle in the Arab countries.

Building on the desperation of these people and educating them in hate, the Arab Nations supplied the refugees with arms. The camps became training grounds for guerrillas bent upon the destruction of Israel. The consequences of such irresponsible action are evident in the week's tragic events. A type of fifth column was created which now threatens the safety of innocent people and exercises tremendous influence in every Arab State. Here then is the child that the Arabs, with some Russian help, nurtured so skillfully.

Thus, then we arrive at the present—a time when 50 men and women remain as hostages, threatened by a group whose aim is to sabotage the almost nonexistent cease-fire talks, embarrass the West, and ransom members of their own group who like themselves have committed criminal acts on an international scale.

We are dealing with a group that operates outside the boundaries of any moral or ethical code. After screening hostages on the basis of their religion, men, women and children of the Jewish faith were not permitted to leave the aircraft. This act amounts to nothing short of genocide—action that seeks the deliberate destruction of a religious group. Yet we must project further. Should any man, woman, or child of any faith, nationality or race have to suffer such fear, danger, and harassment? I say unequivocally, No.

We sit and hope for the safe release of the people still in Palestinian hands. Yet also hope for the prevention of such future incidents. How are we to achieve this?

The range of possible action seems wide, but in reality the choice is narrow. Criminal sanctions and safety regulations seem to have little practical value. Guards and improved detection devices can be of some help. Diplomatic efforts, however, seem to hold the most promise.

The United States is a recent signer of the Tokyo Convention which attempts to lay some foundation for treatment by hijackers and the passengers, crew, and aircraft. The convention assures no mandatory extradition of the hijacker nor does it deal with the prosecution of the hijacker by the state. Yet there is a positive obligation on contracting states to take all appropriate measures to restore control of the aircraft to its lawful commander and to pursue his control of the aircraft.

Somehow, these words and recommendations seem empty in the light of recent tragic events. Clearly, conventions and recommendations will do little to prevent further incidents unless the nations of the world take them seriously. Condemnations can be effective only when nations act in concert.

I believe that the most effective means to prevent these ignominous events in the future is the suspension of airline service to nations that harbor, welcome or allow hijackers to land in their country. Countries seeking to prevent such future incidents should not permit aircrafts of governments sheltering hijackers to land in their country.

The International Civil Aviation Organization, as the international spokesman for airline personnel, can issue a strong statement of policy and invoke their own particular sanction on nations that do not conform.

Yet waiting for one's neighbor to act in this situation is insufficient. The United States must be prepared to invoke these measures—alone, at first, if necessary. Effective leadership is needed on this matter in a world in which order seems to be deteriorating. The United States can take the first step in providing such leadership.

At the same time, let us hope for the safe return of the people still held by the hijackers.

THE ELDERLY AND HANDICAPPED AMERICANS TRANSPORTATION ASSISTANCE ACT

(Mr. RYAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. RYAN. Mr. Speaker, a news story in the August 12 edition of the New York Times reports a grim account of tragedy. Since last fall, two blind persons have fallen through unprotected gaps to the subway tracks. In the first such accident, last October 6, the train started in motion and severed the right leg of a blind woman. In the second incident, last January 13, startled passengers who saw a blind man fall alerted the crew before the train was set in motion. The victim was rescued, but he reported an injured left leg.

These accidents need not have occurred. It was not the blindness of the victims to which the blame for their occurrence can be solely laid. They occurred, as the news story reports, because of the design of the subway cars. The lack of pantograph gates between cars led the blind persons to believe they were walking from the platform through the train's doorway, according to subway personnel. Actually, the space they sensed was that between the cars, and they dropped to the tracks below.

The fact is that not only have we failed to meet the transportation needs of our able-bodied citizens in any manner approaching adequate performance, but we have particularly neglected and ignored the needs of the handicapped and the elderly—both groups which experience particularized transportation problems.

I have previously in the 91st Congress attempted to provide some relief by means of legislation for handicapped persons experiencing transportation problems. H.R. 644 provides a deduction for income tax purposes for disabled individuals for the expenses incurred in securing transportation to and from work. This is in line with the 1968 study conducted by Arthur D. Little, Inc., for the Social and Rehabilitation Service of the Department of Health, Education, and Welfare. This study, entitled "Employment, Transportation, and Handicapped," examined the problems of the handicapped in securing transportation, and the effect of income tax deductions for excessive transportation costs experienced by this group.

H.R. 644 is a worthwhile step. It is recognition of a significant problem, and it offers some relief with regard to that problem. However, far more significant steps are necessary. Obviously, the woman who lost her leg in the New York subway accident, and the man who injured his, can receive little real relief by being eligible for an income tax deduction. Moreover, the handicapped often have incomes so low as to render considerations of tax deductions moot.

Because real relief can and should be provided, I am today introducing the Elderly and Handicapped Americans Transportation Assistance Act—H.R. 19216. This bill offers a comprehensive, full-scale remedy to the transportation barriers presently arrayed against the elderly and the handicapped.

"Transportation and the Handicapped," the report of the President's Committee on Employment of the Handicapped, issued in April 1969, very concisely and very starkly describes the sit-

uation of the handicapped with regard to transportation facilities:

The transportation system as we know it today either completely shuts out or unreasonably restricts one particular element in our society—those whose physical capacities keep them from functioning at a level close to normal.

The most comprehensive recent study exploring the problems of the handicapped with regard to transportation is entitled "Travel Barriers," and was prepared for the Department of Transportation in 1969 by Abt Associates, Inc., under a contract awarded by the Department. This study is much too long to fully recount here, but I think that some of the findings are particularly worth noting, even if just briefly.

The number of handicapped persons experiencing transportation difficulties totals more than 40 million. Some of the handicaps which afflict these people are passing in nature, and I would not want to misleadingly recount this figure. But, the chronically handicapped alone account for about 3 percent of the national population—6,093,000 men, women, and children. In addition, there are more than 18,000,000 men and women 65 years of age and over. A significant percentage of them experience, because of natural aging processes, transportation difficulties. There are at least another 4.6 million people who at any given time are suffering from a serious but short-term illness or injury which restricts their mobility possibilities. Finally, there are several million more people who experience significant difficulties with present transportation facilities because of oversize, undersize, or pregnancy.

Projections for 1985—just 15 years from now—indicate that the number of transportation-handicapped individuals—that is, individuals who, because of a disability, are disadvantaged by the present transportation system and processes—will be even greater. Nearly 5.2 million people will be unable to change levels under their own strength—that is, they will be barred by stairs and in some cases, ramps. Almost 2.4 million persons will have difficulty with some or all of the following functions; passing through turnstiles, opening vehicle doors, lifting baggage, grasping overhead supports, using handrails, and handling small change.

The difficulty of sitting down or getting up while in a moving vehicle, or transferring safely from a stationary position to a moving one—as in an escalator—will be experienced by 3.7 million people in 1985. As the 1969 study, "Travel Barriers," points out at page 21:

This is especially important in vehicles where acceleration is great or begins before the handicapped rider has the opportunity to be seated.

The inability to lift and carry parcels and packages will contribute to the transportation problems of another 3 million people in 1985. Intermodal transfers will be difficult for more than 4 million people in 1985, since they generally require that the passenger be able to walk, or go in a wheelchair, the equivalent of a block or more, and that he be able to wait, standing, until the vehicle is ready to accept passengers.

For either physical or psychological reasons, 4.5 million citizens will experience difficulty moving in crowds. And somewhat less than a million people will be affected by difficulty in identifying audio and visual cues. Finally, there will be the millions who, at any given time, will be incapacitated by transportation modes because of temporary injuries, illnesses, and other restrictions on their mobility.

I think it should be clearly understood that failure of present transportation facilities to meet the needs of the millions of handicapped and elderly people who need public transportation results in a very considerable economic loss—both to these individuals, and to the taxing governments which would benefit by the increased incomes of these individuals.

The Arthur D. Little, Inc., 1968 study, "Employment, Transportation and the Handicapped," was particularly directed at examining the "employable transportation handicapped." That study came up with an estimate of 1,493,000 persons falling into this group. Of course, 7 percent, or 103,000, were estimated to be "transportation sensitive unemployed," either because of the cost of unavailability of transportation to work. If each of these persons were successfully encouraged to return to work, the study estimated that incomes of $452,692,000 would be generated annually, or $4,388 each. In addition, welfare payments to these persons would decline by $49,582,000. And income taxes would increase by $39,697,000.

The 1969 study conducted by Abt Associates, Inc., for the Department of Transportation estimated an even higher number of persons who would benefit in terms of employment opportunities. This study revealed that of the entire handicapped population, 13 percent of the persons aged 17 to 64—the age group comprising potential labor force members—indicated that transportation was a factor in their not being employed and that they would return to work if transportation were no longer a problem. The study, on the basis of its assumption that only handicapped persons located in standard metropolitan statistical areas would benefit from any metropolitan transportation program, concluded that 189,015 persons out of the target population of 1,456,000 handicapped SMSA residents would return to work. The total yearly economic benefits which would result—that is, the total yearly increase in goods and services—would amount to $824,040,000, or about $3,887,000 per standard metropolitan statistical area.

"Travel Barriers" very correctly pointed out that the benefits of improved public transportation for the handicapped and elderly are only in one respect economic. As the study stated:

The social benefits of enabling many handicapped persons to work, study, and participate in recreational activities are equally compelling. These benefits also include the reduced burden of aid on friends and relatives of the handicapped individual, the increased contribution to community activities of many talented and well educated handicapped persons, and the reduction of the often debilitating and productivity inhibiting emotional burdens of physical tragedies on the entire community (p. 27).

In addition, the psychological benefits to the handicapped person whose mobility is expanded by improved transportation are considerable. Contacts with other people increase; self-esteem also increases. In fact, most respondents in the Abt sample population made a connection between increased mobility and an improvement in their general outlook on life. When asked if the chance to take more trips would make a difference in their outlook, 62 percent of the sample replied affirmatively. Of these respondents, 88 percent indicated that they would take at least one to two additional trips weekly, if given the opportunity.

In the sample group which the Travel Barriers study examined, close to 41 percent of the respondents indicated that life was made difficult for them because of limitations in their secondary activities—such as shopping, participating in recreation—and in their social life. Of these respondents, 94 percent indicated that they would take at least one to two additional trips per week if they had access to a low-cost, barrier-free transportation system.

Of particular note with regard to the social and psychological benefits which would accrue from improved transportation facilities are the concerns of the elderly. In providing a brief profile of the normal travel behavior of this group, Travel Barriers stated:

The aging take more trips than do other segments of the handicapped population, probably because they are relatively less disabled and generally have more leisure time. The average number of daily intra-regional trips taken by the aging is 1.74 compared with 1.3 taken by all handicapped persons. Obviously, this group takes fewer work trips, but more shopping, medical, and "other" trips. (P1107.)

The study continued in conclusion:

In sum, it appears that the aging, being more dependent on public transportation, closer to social activities, and in possession of a more positive self-concept, would be more likely to explore the increased opportunities provided by the removal of travel barriers. Thirty per cent of this group, compared with 21% of the rest of the handicapped population, indicated that they would take additional shopping trips, and 52% of the aging, compared with 49% of the total sample, said they would take more recreation trips if they had access to a low cost public transportation system that they could use comfortably and safely. (P. 108.)

It is clear that the transportation handicapped population is large and that it is desirous of change. It is also clear that improvements in the public transportation systems would be of enormous benefit to the handicapped and the elderly, and thereby to all of us.

What barriers do the handicapped and the elderly face in public transportation? The answer is—many. Following is a chart from the 1969 Abt study showing some of these barriers in relation to the disability afflicting the individual traveler:

TYPICAL BARRIERS BY MODE

Functional disability	Train	Subway	Bus	Airplane
Walk more than 1 block	Walk from curb through concourse to platform.	Walk from entrance to boarding platform.	Walk from origin to stop or stop to destination.	Walk from curb to gate.
Self-propelled level change	Board train via steps.	Enter or exit station.	Board bus via steps.	Board plane via stairs.
Sit down, get up	Sit/rise from waiting room or train seats.	Sit/rise from seat in car.	Sit/rise from seat.	Sit/rise from seat in lounge or on plane.
Stoop, kneel, crouch	Pick up baggage.	Pick up packages.	Pick up packages.	Pick up baggage.
Reach-handle	Open terminal door. Enter restroom. Grasp handrail. Open compartment door. Lift suitcase to rack. Buy or turn in ticket.	Buy token. Operate turnstile. Hold overhead grip. Use exit turnstile.	Signal bus. Deposit fare. Grasp overhead grip. Pull signal cord.	Buy ticket. Handle baggage. Fasten seatbelt. Reach overhead switches. Hold oxygen mask. Lower tray table.
Carry 10-pound weight	Carry baggage. Use overhead baggage rack.	Carry packages.	Carry packages.	Handle own baggage.
Move in crowds	Terminals.	Platform and vehicle.	Terminal vehicle.	Ticket counter, boarding area.
Identify visual and audio cues	Read direction signs, clocks. Locate gates, restrooms, seats, exits. Hear announcements and warnings.	Read direction signs. See arriving train. Locate platform edge. Hear announcements and warnings.	See approaching bus. Read bus destination. Locate bus stop, curb, stop. Hear announcements, ask directions.	Locate counters, gates. See schedule displays. Hear PA system onboard announcements.
Wait standing	Wait on platform.	Wait on platform.	Wait outdoors.	Stand in boarding or ticket line.

Other transportation problems confronting the elderly and the handicapped are particularly related to the travel situation. For example, acceleration and deceleration, especially when uneven, can cause hazardous encounters between the passengers and stationary parts of the vehicle. Fifty-five percent of the handicaped interviewed for the "Travel Barriers" study said that they would have difficulty staying on their feet during a typical subway start, and many indicated that they had trouble remaining standing in an accelerating bus. Thirty-seven percent of the group doubted that they could walk to a restroom in a moving train, and 21 percent said that they would be unable to do so in an airplane. Approximately half of the group was not able to ride standing with a typical grip to hold.

Crowd movements are also one of the travel barriers particularly difficult for the handicapped and the elderly, who are less able to maneuver quickly and easily, especially in crowded situations. Also, time pressure disadvantages these people for the same reasons.

Long walking distances in terminals are also a problem for the handicapped and the elderly. They are also limited by such impediments as braces and wheelchairs. And sensory limitations impair the mobility of the blind.

Costs are also a major barrier, of an economic nature, to travel by the elderly and by the handicapped. The recent findings of Project Find, conducted by the National Council on the Aging to give a national picture of the elderly poor, are particularly illustrative here:

> Amount of income appears to be very important in the degree of difficulty experienced. Very small amounts of income added to that of persons living at the poverty line appear to result in considerable alleviation of transportation problems.

Reduced fare plans, such as are currently in operation in approximately 35 cities, including New York City, would be particularly beneficial. More than 5 years ago I first recommended a reduced fare program for the elderly in the city of New York.

The Abt study findings are also particularly noteworthy—they include together both the elderly handicapped and younger handicapped individuals. In using the city of Boston as a survey area, the study found:

> Curtailed labor force participation of the physically handicapped accounts, in part, for their generally very low incomes, and the low incomes in turn further limit their lifestyle. In addition to having lower earned incomes, the disposable income of handicapped persons is decreased as a result of higher medical costs.
>
> Compared with the non-handicapped population in the city of Boston and its environs . . ., the median personal income for handicapped persons is very low, between three and four thousand dollars, instead of five to six thousand. This is confirmed by additional data from the sample which indicated that the median loss in income attributable to the disability was $2000. Sixty-nine percent of the Abt handicapped sample had incomes below $3000 for the last year and only 36% fell into this same category before the onset of their disability.
>
> * * * * *
>
> As expected, family income is highly correlated with job status. The employed handicapped tend to fall into higher income categories than do the unemployed. (P. 50–52).

I think it eminently clear that the elderly and the handicapped face considerable difficulties in utilizing current transportation facilities—both because of physical barriers and because of cost. It is also clear that various steps can be taken to alleviate and even eradicate many of these difficulties. The "Travel Barriers" study suggest several such steps. It also analyzes the feasibility of such approaches as a specialized system serving only the handicapped and elderly, and concludes that such a system would be economically practicable.

More study is needed, of course. But, perhaps more important at this juncture, action is needed. Little is really being done to deal with the transportation needs of the handicapped and the elderly—needs which appear to be by now quite well articulated, but which have not yet received sufficient positive, tangible attention.

My bill, H.R. 19216, the Elderly and Handicapped Americans Transportation Assistance Act, offers a program which, while moderate, is an intelligent, reasonable approach, I believe. The bill amends several provisions of the Urban Mass Transportation Act of 1964. Section 2 of the bill assures that special transportation services for the elderly, and the physically and mentally handicapped, which are operated by States or local public bodies will be eligible for assistance.

Section 3 of the Elderly and Handicapped Americans Transportation Assistance Act directs the Secretary of Transportation, in consultation with the Secretary of Health, Education, and Welfare, to prescribe standards for buses, subway cars and other rolling stock, and prevents any assistance being given to States or local public bodies seeking funds under the Urban Mass Transportation Act unless they comply with these standards. Thus, it will be assured that those who are handicapped will be able to use the new transportation facilities which will be built with Federal assistance, and which will be improved or bought with Federal assistance.

Section 4 of my bill provides that in addition to whatever sums are allocated out of present authorizations for the funding of special transportation services, there shall be an additional authorization added to the existing authorization, which shall be earmarked for these services. My bill provides $5 million for fiscal year 1971, $10 million for fiscal year 1972, and $20 million for fiscal year 1973.

Section 5 takes cognizance of the fact that while special service projects—such as Dial-A-Bus—can now be actually funded, further study is also appropriate. Thus, the bill provides for research and demonstration projects to provide transportation for the elderly and the handicapped. For these projects, $3 million is authorized for fiscal year 1971, $5 million for fiscal year 1972, and $8 million for fiscal year 1973.

In addition to the Elderly and Handicapped Americans Transportation Assistance Act, I have today introduced a related bill—H.R. 19217—which makes up an additional part of this legislative formula to provide needed answers to an acute problem. This bill amends the act of August 12, 1968, to insure that facilities constructed with assistance under the Urban Mass Transportation Act of 1964 are designed and constructed to be accessible to the elderly and the handicapped.

A similar provision was enacted into law earlier this year. Public Law 91–205 requires that the Washington, D.C., area subway—Metro—be constructed so as to enable utilization by the handicapped. My bill would expand this concept to authorize that all buildings designed, constructed, or altered with assistance under the Urban Mass Transportation Act—that is, buildings such as subway and

bus stations—be maximally utilizable by the physically disadvantaged. As a corollary, the Elderly and Handicapped Americans Transportation Assistance Act requires that rolling stock—such as buses and subway cars—also be so designed, constructed, or altered.

I urge the most careful consideration of these bills by my colleagues. I think I have sufficiently detailed the problem, and I think these two bills make a major step in resolving that problem. But, speaking in less abstract terms, I would say that these two bills help people—people who need help, people who want to be, and can be, self-sufficient, active, citizens. These bills open the door. And that is all that is asked.

The text of my two bills follow:

H.R. 19216

To amend the Urban Mass Transportation Act of 1964 to provide assistance in the design and construction of transportation services and facilities meeting the needs of the elderly and the handicapped

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Elderly and Handicapped Americans Transportation Assistance Act."

SEC. 2. Section 12(c)(5) of the Urban Mass Transportation Act of 1964 is amended by striking out "but not including" and inserting in lieu thereof "including special transportation service for the elderly and the physically and mentally handicapped, but not including."

SEC. 3. Section 3 of the Urban Mass Transportation Act of 1964 is amended by adding at the end thereof the following new subsection:

"(d) In order to assure that the elderly and the physically and mentally handicapped will be able to make maximum use of any mass transportation system with respect to which assistance is provided under this Act, the Secretary, in consultation with the Secretary of Health, Education, and Welfare, shall by regulation prescribe such standards (governing the construction and equipment of the rolling stock and other facilities to be used in such system) as he determines to be reasonable and appropriate and calculated to permit such use. No financial assistance shall be provided under this Act to any State or local public body or agency thereof unless the facilities and equipment to be acquired, constructed, or improved with such assistance will be in full compliance with such standards."

SEC. 4. Section 4(b) of the Urban Mass Transportation Act of 1964 is amended by inserting immediately after the first sentence the following new sentence: "In addition, to finance grants under this Act to provide special transportation services for the elderly and the physically and mentally handicapped, there is hereby authorized to be appropriated not to exceed $5,000,000 for fiscal year 1971, $10,000,000 for fiscal year 1972, and $20,000,000 for fiscal year 1973."

SEC. 5. The Urban Mass Transportation Act of 1964 is further amended by adding at the end thereof the following new section:

"GRANTS FOR RESEARCH AND DEMONSTRATION PROJECTS TO PROVIDE TRANSPORTATION FOR THE ELDERLY AND THE HANDICAPPED

"SEC. 16. (a) The Secretary is authorized to make grants to public or nonprofit private agencies, organizations, and institutions and to enter into contracts with agencies, organizations, institutions, and individuals—

"(1) to study the economic and service aspects of transportation for elderly persons, and physically or mentally handicapped persons, living in urban areas;

"(2) to conduct research and demonstration projects on portal-to-portal service and demand-actuated services;

"(3) to conduct research and demonstration projects concerning reduced fare transportation programs for elderly and physically and mentally handicapped persons;

"(4) to conduct research and demonstration projects to coordinate and develop better transportation services rendered by social service agencies;

"(5) to conduct research and demonstration projects regarding the feasibility of special transportation sub-systems for use by elderly and physically and mentally handicapped persons;

"(6) to conduct research and demonstration projects concerning other relevant problems affecting the mobility of elderly and physically and mentally handicapped persons.

"(b) There are authorized to be appropriated to carry out this section $3,000,000 for the fiscal year ending June 30, 1971, $5,000,000 for the fiscal year ending June 30, 1972, and $8,000,000 for the fiscal year ending June 30, 1972."

H.R. 19217

To amend the Act of August 12, 1968, to insure that facilities constructed with assistance under the Urban Mass Transportation Act of 1964 are designed and constructed to be accessible to the elderly and the handicapped

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the first section of the Act entitled "An Act to insure that certain buildings financed with Federal funds are so designed and constructed as to be accessible to the physically handicapped", approved August 12, 1968 (42 U.S.C. 4151), as amended, is amended—

(1) by striking out "or" at the end of paragraph (3);

(2) by striking out the period at the end of paragraph (4) and inserting in lieu thereof "; or"; and

(3) by adding at the end thereof the following:

"(5) to be constructed with financial assistance provided under the Urban Mass Transportation Act of 1964."

SEC. 2. (a) Such Act is further amended by redesignating sections 5 and 6 as sections 6 and 7, respectively, and by inserting after section 4 the following new section:

"SEC. 5. The Secretary of Transportation, in consultation with the Secretary of Health, Education, and Welfare, is authorized to prescribe such standards for the design, construction, and alteration of buildings, structures, and facilities which are provided with financial assistance under the Urban Mass Transportation Act of 1964 and are subject to this Act as may be necessary to insure that elderly and physically and mentally handicapped persons will have ready access to, and use of, such buildings."

(b) Section 7 of such Act (as redesignated by subsection (a) of this section) is amended by inserting immediately before "is authorized—" the following: "and the Secretary of Transportation with respect to standards issued under section 5 of this Act,".

NIXON RECESSION PERSISTS

(Mr. ALBERT (at the request of Mr. CHARLES H. WILSON) was given permission to extend his remarks at this point in the RECORD.)

Mr. ALBERT. Mr. Speaker, approximately a month ago, a minuscule rise of 0.2 percent in the Federal Reserve Board's index of industrial production was hailed by the administration's economic soothsayers as evidence positive that the nonexistent Republican recession was just about over and that the Nation was well on the road to revived economic expansion coupled with price stability.

The euphoric statements which hailed this happy event were to be found conspicuously on page one of every newspaper. The chorus of hosannas emanating from the executive branch dominated the airways.

Yesterday, the Federal Reserve Board announced that industrial production for August had declined, not a great decline it is true, rather one exactly equal to the July rise which had been hailed as a harbinger of returning prosperity by Republican spokesmen. Now the administration cannot have it both ways. If a rise of 0.2 percent in July is to be hailed as a definitive sign that the economy is moving upward, so a 0.2-percent decline in August can legitimately be regarded as bad news for the American people.

Mr. Speaker, in marked contrast to the widespread front-page publicity which featured July's industrial production increase, one must search diligently the financial section to find out about the August decline. The Wall Street Journal this morning informs us that—

President Nixon met with four of his economic advisers to discuss "economic matters."

We are further informed that Mr. Ziegler, the White House Press Secretary, stated that there was "nothing out of the ordinary on the agenda."

Mr. Speaker, cozy White House meetings called to discuss "nothing out of the ordinary," unfortunately are symbolic of the business as usual attitude characteristic of this Republican administration. The high level of prosperity and full employment inherited by it in January 1969 has been dissipated. Unemployment in August was up over that of July and is still rising while inflation continues to erode the value of the reduced paycheck being received by the American workingman.

Mr. Speaker, Presidential abdication of responsibility for full employment and price stability can no longer be tolerated. Once again, I urge the President to summon a national conference on inflation and unemployment. I likewise call upon him to terminate those economic policies which are sapping the strength of the American economy. Finally, he should utilize the authority which this Congress has granted him to establish credit controls as well as price and wage controls in order to stabilize the economy.

ALGERIA—INTERNATIONAL THIEF

(Mr. HALL asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. HALL. Mr. Speaker, I wish to call to the attention of the House, the very serious difficulties which have been created by the actions of the present Government of Algeria both toward our Government and against the American-owned properties in Algeria.

Three years ago, as a result of the Arab-Israel conflict of June 1967, the

Government of Algeria severed diplomatic relations with the United States and at the same time placed the American oil companies operating there under the control of Government custodians. In addition, currency controls were enacted which required the return to Algeria of all proceeds from the sale of crude oil extracted from Algeria. Although these steps initially were described as temporary war measures, the properties taken have not been returned to their owners and no compensation has been paid. Nor have diplomatic relations between the United States and Algeria been resumed.

The Government custodians appointed by Algeria to manage these properties have, without the consent of the American companies, exercised virtually unfettered control over the companies. I understand that they have paid disputed royalty and tax claims, and made all decisions with regard to the personnel of the companies affected. Thus, the American companies have been prevented from managing their own properties and from receiving any of the income generated by these properties.

This de facto expropriation by Algeria came only 5 years after Algeria formally confirmed and guaranteed the hydrocarbon concessions granted by France prior to Algeria's independence.

In 1962, as part of the Evian Agreements leading to Algeria's independence, France and Algeria executed the Declaration of Principles on the Cooperation for Development of the Wealth of the Sahara Sub-Soil under which Algeria confirmed the concessions made by France and agreed not to make "more onerous or to paralyze the exercise of rights" granted by France. By the very terms of this agreement, its protection extended to all holders of concessions "independently of any condition of nationality of the persons or of the location of the principal office" of the holders of the concessions.

In 1965, a new Franco-Algerian accord was executed under which the tax and royalty terms of existing concessions were modified and France made subsidies and loans to Algeria. This new accord, however, was not intended by France to apply to non-French companies operating in Algeria. This fact was specifically confirmed in the proceedings in the French assembly when the 1965 Franco-Algerian accord was accepted. France had satisfied its obligation to these companies as grantor of the concessions in 1962 when it required Algeria to confirm and guarantee all of the concessions granted by France, irrespective of the nationality of the holder. Thereafter, France negotiated solely on behalf of its own interests and those of French companies.

Algeria subsequently attempted to modify the concessions held by American companies along the same lines as the modifications of the French concessions included in the Franco-Algerian accord of 1965. Although the American companies entered into extensive negotiations with Algeria, the principal obstacle to agreement was the demand made by Algeria that the U.S. companies give very large subsidies and loans to Algeria. This the American companies were unable to accept.

The 1962 Evian declaration included provision for the settlement of disputes by binding international arbitration. These provisions were later confirmed in an arbitration accord executed in 1963 which expressly supplemented the 1962 declaration. Nevertheless, Algeria has categorically refused to participate in arbitration proceedings initiated by one American company seeking to settle outstanding differences.

Now Algeria wants to export liquefied natural gas to the United States and has contracted with American companies for this purpose. One of these companies has applied to the Federal Power Commission for permission to import liquefied natural gas from Algeria. FPC approval of such requests is, however, subject to the test of whether such importations would be in the public interest of the United States.

I am convinced that it would not be in the public interest to grant this application at this time. First, Algeria severed diplomatic relations with the United States and expropriated property owned by U.S. citizens in 1967. It now seeks to market in the United States the same kind of products which it has taken by illegal acts from U.S. companies. Why should Algeria be rewarded with access to our markets when she has not settled the claims of the American owners and refuses even to honor her commitment to arbitrate disputes? Second, natural gas is an important energy which is in great demand and short supply in the United States. The need, therefore, is for a long-term and reliable source. Granting the application would create a dependency for an essential energy on a country which has already demonstrated that it does not abide by its international agreements. It is better for the United States to look elsewhere for its natural gas supply than to turn to a source which may some day, at the peak of urgency and dependency, turn off the tap.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows to:

Mr. McMILLAN, for the remainder of week, on account of official business.

Mr. BLATNIK (at the request of Mr. BOGGS), for today, on account of official business.

Mr. DOWDY (at the request of Mr. BOGGS), for the week of Monday, September 14, on account of illness.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. DAVIS of Georgia, for 10 minutes, today.

Mr. RANDALL, for 30 minutes, today.

(The following Members (at the request of Mr. BIESTER) to address the House and to revise and extend their remarks and include extraneous matter:)

Mr. STEIGER of Wisconsin, for 30 minutes, today.

Mr. WYDLER, for 30 minutes, on September 16.

Mr. MILLER of Ohio, for 5 minutes, today.

(The following Members (at the request of Mr. DAVIS of Georgia) to address the House and to revise and extend their remarks and include extraneous matter:)

Mr. FLOOD, for 15 minutes, today.

Mr. GONZALES, for 15 minutes, today.

Mr. RYAN, for 15 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. GROSS and to include newspaper articles.

(The following Members (at the request of Mr. BIESTER) and to include extraneous matter:)

Mr. BUSH in two instances.
Mr. BROWN of Ohio.
Mr. HALL.
Mr. MIZE.
Mr. GROVER.
Mr. BRAY in two instances.
Mr. TAFT.
Mr. WYMAN in two instances.
Mr. HALPERN.
Mr. DON H. CLAUSEN.
Mr. ERLENBORN.
Mr. FREY.
Mr. HUTCHINSON.
Mr. DELLENBACK.
Mr. ROUSSELOT.
Mr. HUNT.
Mr. COLLIER in five instances.
Mr. ARENDS.
Mr. SCHMITZ.
Mr. COUGHLIN in two instances.
Mr. DERWINSKI in four instances.
Mr. SKUBITZ in three instances.
Mr. BIESTER.

(The following Members (at the request of Mr. DAVIS of Georgia) and to include extraneous matter:)

Mr. BOLLING.
Mr. GAYDOS in six instances.
Mr. DIGGS in four instances.
Mr. LOWENSTEIN in five instances.
Mr. DANIELS of New Jersey in three instances.
Mr. OTTINGER in three instances.
Mr. LONG of Maryland in 10 instances.
Mr. RODINO in four instances.
Mr. BINGHAM in two instances.
Mr. GONZALEZ in two instances.
Mr. WOLFF in four instances.
Mr. WILLIAM D. FORD in two instances.
Mr. DONOHUE in two instances.
Mr. ASHLEY.
Mr. ANDERSON of California.
Mr. O'HARA in two instances.
Mr. MAHON in two instances.
Mr. HELSTOSKI in two instances.
Mr. DORN.
Mr. MIKVA.
Mr. RYAN in two instances.

SENATE BILL REFERRED

A bill of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S. 3418. An act to amend the Public Health Service Act to provide for the making of grants to medical schools and hospitals to assist them in establishing special departments and programs in the field of family practice, and otherwise to encourage and promote the training of medical and paramedical personnel in the field of family medicine, and to alleviate the effects of malnutrition, and to provide for the establishment of a National Information and Resource Center for the Handicapped; to the Committee on Interstate and Foreign Commerce.

SENATE ENROLLED BILLS SIGNED

The SPEAKER announced his signature to enrolled bills of the Senate of the following titles:

S. 203. An act to amend the Act of June 13, 1962 (76 Stat. 96), with respect to the Navajo Indian irrigation project;

S. 434. An act to authorize the Riverton extension unit, Missouri River Basin project, to include therein the entire Riverton reclamation project, and for other purposes;

S. 3617. An act to amend the Marine Resources and Engineering Development Act of 1966 to continue the National Council on Marine Resources and Engineering Development; and

S. 3838. An act to prevent the unauthorized manufacture and use of the character "Johnny Horizon", and for other purposes.

ADJOURNMENT

Mr. STRATTON. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 23 minutes p.m.), the House adjourned until tomorrow, Wednesday, September 16, 1970, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under Clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2373. A communication from the President of the United States, adjusting the statutory limitation on fiscal year 1971 budget outlays, pursuant to title V of the Second Supplemental Appropriations Act, 1970 (H. Doc. No. 91-387); to the Committee on Appropriations and ordered to be printed.

2374. A letter from the Director, Office of Management and Budget, Executive Office of the President, transmitting a report for the period ended July 31, 1970, on the operation of section 501 of the Second Supplemental Appropriations Act, 1970, establishing a limitation on budget outlays (H. Doc. No. 91-386); to the Committee on Appropriations and ordered to be printed.

2375. A letter from the Director, Office of Emergency Preparedness, Executive Office of the President, transmitting a copy of the statistical supplement to the stockpile report to Congress for the period ending June 30, 1970, pursuant to section 4 of the Strategic and Critical Materials Stock Piling Act; to the Committee on Armed Services.

2376. A letter from the Secretary of Health, Education, and Welfare, transmitting a report on the administration of the Health Professions Educational Assistance Act and its subsequent amendments, pursuant to title I, part D, of the Health Manpower Act of 1968; to the Committee on Interstate and Foreign Commerce.

2377. A letter from the Secretary of Health, Education, and Welfare, transmitting a report on the administration of title VIII (Nurse Training) of the Public Health Service Act, pursuant to section 232 of the Health Manpower Act of 1968; to the Committee on Interstate and Foreign Commerce.

2378. A letter from the Secretary of Transportation, transmitting a draft of proposed legislation to amend the act creating the St. Lawrence Seaway Development Corporation to terminate the accrual and payment of interest on the obligations of the Corporation, and for other purposes; to the Committee on Public Works.

2379. A letter from the Secretary of Transportation, transmitting a draft of proposed legislation to provide for the protection of persons and property aboard U.S. air carrier aircraft, and for other purposes; to the Committee on Ways and Means.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. TEAGUE of Texas: Committee on Veterans' Affairs. H.R. 15911. A bill to amend title 38 of the United States Code to increase the rates and income limitations relating to payment of pension and parents' dependency and indemnity compensation, and for other purposes; with an amendment (Rept. No. 91-1448). Referred to the Committee of the Whole House on the State of the Union.

Mr. TEAGUE of Texas: Committee on Veterans' Affairs. H.R. 16710. A bill to amend chapter 37 of title 38, United States Code, to authorize guaranteed and direct loans for mobile homes if used as permanent dwellings, to authorize the Administrator to pay certain closing costs for, and interest on, certain loans guaranteed and made under such chapter, to remove the time limitation on the use of entitlement to benefits under such chapter, and for other purposes; with amendments (Rept. No. 91-1449). Referred to the Committee of the Whole House on the State of the Union.

Mr. TEAGUE of Texas: Committee on Veterans' Affairs. H.R. 18448. A bill to provide mortgage protection life insurance for service-connected disabled veterans who have received grants for specially adapted housing; without amendment, Rept. No. 91-1450). Referred to the Committee of the Whole House on the State of the Union.

Mr. TEAGUE of Texas: Committee on Veterans' Affairs. H.R. 18731. A bill to amend the act of July 25, 1956, relating to the American Battle Monuments Commission; with amendments (Rept. No. 91-1451). Referred to the Committee of the Whole House on the State of the Union.

Mr. TEAGUE of Texas: Committee on Veterans' Affairs. H.R. 13301. A bill to provide for the adjustment by the Administrator of Veterans' Affairs of the legislative jurisdiction over lands belonging to the United States which are under his supervision and control; without amendment (Rept. No. 91-1452). Referred to the Committee of the Whole House on the State of the Union.

Mr. HALEY: Committee on Interior and Insular Affairs. H.R. 13519. A bill to provide for the conveyance of certain real property of the United States to the Yankton Sioux Tribe; with an amendment (Rept. No. 91-1453). Referred to the Committee of the Whole House on the State of the Union.

Mr. HALEY: Committee on Interior and Insular Affairs. H.R. 16811. A bill to authorize the Secretary of the Interior to declare that the United States holds in trust for the Eastern Band of Cherokee Indians of North Carolina certain lands on the Cherokee Indian Reservation heretofore used for school or other purposes; with an amendment (Rept. No. 91-1454). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. CORMAN:

H.R. 19188. A bill to authorize the National Science Foundation to conduct research and educational programs to prepare the country for conversion from defense to civilian, socially oriented research and development activities, and for other purposes; to the Committee on Science and Astronautics.

By Mr. GIAIMO (for himself, Mr. ANDERSON of California, Mr. BROWN of California, Mr. BURTON of California, Mr. EILBERG, Mr. HARRINGTON, Mr. HECHLER of West Virginia, Mr. HORTON, Mr. HOSMER, Mr. MAILLIARD, Mr. MATSUNAGA, Mr. MCFALL, Mr. MIKVA, Mr. MOORHEAD, Mr. NIX, Mr. OBEY, Mr. OTTINGER, Mr. REES, Mr. ROE, Mr. ROONEY of Pennsylvania, Mr. SIKES, Mr. TIERNAN, Mr. TUNNEY, Mr. VAN DEERLIN, and Mr. CHARLES H. WILSON):

H.R. 19189. A bill to authorize the National Science Foundation to conduct research and educational programs to prepare the country for conversion from defense to civilian, socially oriented research and development activities, and for other purposes; to the Committee on Science and Astronautics.

By Mr. GIAIMO (for himself, Mr. BEALL of Maryland, Mr. BINGHAM, Mr. BOLAND, Mr. BRASCO, Mr. DONOHUE, Mr. DULSKI, Mr. EDWARDS of California, Mr. GUBSER, Mr. HELSTOSKI, Mr. HICKS, Mr. HOWARD, Mr. LOWENSTEIN, Mr. MURPHY of New York, Mr. OLSEN, Mr. PIKE, Mr. ROSENTHAL, Mr. SHRIVER, Mr. SYMINGTON, Mr. VANIK, and Mr. WOLFF):

H.R. 19190. A bill to authorize the National Science Foundation to conduct research and educational programs to prepare the country for conversion from defense to civilian, socially oriented research and development activities, and for other purposes; to the Committee on Science and Astronautics.

By Mr. GONZALEZ:

H.R. 19191. A bill to amend the Older Americans Act of 1965 to provide grants to States for the establishment, maintenance, operation, and expansion of low-cost meal programs, nutrition training and education programs, opportunity for social contacts, and for other purposes; to the Committee on Education and Labor.

By Mr. MCMILLAN:

H.R. 19192. A bill to provide additional revenue for the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

By Mr. MINISH:

H.R. 19193. A bill to create a health security program; to the Committee on Ways and Means.

By Mr. MOSS (for himself and Mr. DINGELL):

H.R. 19194. A bill to establish a Department of Natural Resources and to transfer certain agencies to and from such Department; to the Committee on Government Operations.

By Mr. MOSS (for himself, Mr. DINGELL, Mr. BLATNIK, and Mr. REUSS):

H.R. 19195. A bill to establish a Department of Environmental Quality, and for other purposes; to the Committee on Government Operations.

By Mr. OTTINGER:

H.R. 19196. A bill to promote the greater availability of motor vehicle insurance in interstate commerce under more efficient and beneficial marketing conditions; to the Committee on Interstate and Foreign Commerce.

H.R. 19197. A bill to regulate interstate commerce by requiring certain insurance as a condition precedent to using the public streets, roads, and highways, and for other purposes; to the Committee on Interstate and Foreign Commerce.

H.R. 19198. A bill to amend the Internal Revenue Code of 1954, and for other purposes; to the Committee on Ways and Means.

By Mr. OTTINGER (for himself, Mr. BRADEMAS, and Mr. MCCARTHY):

H.R. 19199. A bill to amend the Older Americans Act of 1965; to the Committee on Education and Labor.

By Mr. STEIGER of Wisconsin (for himself and Mr. SIKES):

H.R. 19200. A bill to assure safe and healthful working conditions for working men and women; by providing the means and procedures for establishing and enforcing mandatory safety and health standards; by assisting and encouraging the States in their efforts to assure safe and healthful working conditions; by providing for research, information, education, and training in the field of occupational safety and health; and for other purposes; to the Committee on Education and Labor.

By Mr. PATTEN:

H.R. 19201. A bill to amend title 10, United States Code, to equalize the retirement pay of members of the uniformed services of equal rank and years of service, and for other purposes; to the Committee on Armed Services.

By Mr. BURTON of Utah:

H.R. 19202. A bill to amend the Internal Revenue Code of 1954 to provide income tax simplification, reform, and relief for small business; to the Committee on Ways and Means.

By Mr. CORBETT:

H.R. 19203. A bill to permit immediate retirement of certain Federal employees; to the Committee on Post Office and Civil Service.

By Mr. FISH:

H.R. 19204. A bill to provide for Government guarantee of private loans to certain motorbus operators for purchase of modern motorbuses and equipment, to foster the development and use of more modern and safer operating equipment by such carriers, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. FULTON of Pennsylvania:

H.R. 19205. A bill to amend title VII of the Housing and Urban Development Act of 1965 to authorize financial assistance for the development and improvement of street lighting facilities; to the Committee on Banking and Currency.

H.R. 19206. A bill to prohibit the intimidation, coercion, or annoyance of a person officiating at or attending a religious service or ceremony in a church and to make such acts a Federal offense; to the Committee on the Judiciary.

H.R. 19207. A bill to provide for a training program for organized crime prosecutors, an annual conference of Federal, State, and local officials in the field of organized crime, an annual report by the Attorney General on organized crime, and for other purposes; to the Committee on the Judiciary.

H.R. 19208. A bill to provide for the protection of children against physical injury caused or threatened by those who are responsible for their care; to the Commttee on Ways and Means.

By Mr. GRAY:

H.R. 19209. A bill to amend title 18 of the United States Code to provide for better control of interstate traffic in explosives; to the Committee on the Judiciary.

H.R. 19210. A bill to regulate the importation, manufacture, distribution, storage and possession of explosives, blasting agents, and detonators, and for other purposes; to the Committee on the Judiciary.

By Mr. HELSTOSKI:

H.R. 19211. A bill to assist in the provisions of housing for the elderly, and for other purposes; to the Committee on Banking and Currency.

H.R. 19212. A bill to provide early educational opportunities for all preschool children, and to encourage and assist in the formation of local preschool districts by residents of urban and rural areas; to the Committee on Education and Labor.

H.R. 19213. A bill to amend the Railroad Retirement Act of 1937 to provide that the amount of the annuity payable thereunder to a widow shall not be less than the amount of the annuity which would have been payable to her deceased husband if he were living and otherwise qualified to receive an employee's annuity thereunder; to the Committee on Interstate and Foreign Commerce.

By Mr. MIKVA:

H.R. 19214. A bill to restore to Federal civilian employees their rights to participate, as private citizens, in the political life of the Nation, to protect Federal civilian employees from improper political solicitations, and for other purposes; to the Committee on House Administration.

By Mr. POFF:

H.R. 19215. A bill relating to the control of organized crime in the United States; to the Committee on the Judiciary.

By Mr. RYAN:

H.R. 19216. A bill to amend the Urban Mass Transportation Act of 1964 to provide assistance in the design and construction of transportation services and facilities meeting the needs of the elderly and the handicapped; to the Committee on Banking and Currency.

H.R. 19217. A bill to amend the act of August 12, 1968, to insure that facilities constructed with assistance under the Urban Mass Transportation Act of 1964 are designed and constructed to be accessible to the elderly and the handicapped; to the Committee on Public Works.

By Mr. RYAN (for himself and Mr. TIERNAN):

H.R. 19218. A bill to amend the Truth in Lending Act to protect consumers against careless and erroneous billing, and to require that statements under open-end credit plans be mailed in time to permit payment prior to the imposition of finance charges; to the Committee on Banking and Currency.

By Mr. FULTON of Pennsylvania:

H.J. Res. 1368. Joint resolution proposing an amendment to the Constitution of the United States to confer upon Congress the power to enact reasonable laws defining obscenity and regulating the publication, both spoken and written, of obscene material; to the Committee on the Judiciary.

By Mr. MOSS (for himself and Mr. DINGELL):

H. Res. 1209. Resolution to disapprove Reorganization Plan No. 3; to the Committee on Government Operations.

H. Res. 1210. Resolution to disapprove Reorganization Plan No. 4; to the Committee on Government Operations.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BROYHILL of Virginia:

H.R. 19219. A bill for the relief of Elvia R. Benavides; to the Committee on the Judiciary.

By Mr. BURKE of Massachusetts:

H.R. 19220. A bill for the relief of Zoi Locopolou; to the Committee on the Judiciary.

By Mr. CASEY:

H.R. 19221. A bill for the relief of Agustin Pinera; to the Committee on the Judiciary.

H.R. 19222. A bill for the relief of Dr. David G. Simons, lieutenant colonel, U.S. Air Force (retired); to the Committee on the Judiciary.

By Mr. HANNA:

H.R. 19223. A bill for the relief of Kyung Bong Kim, his wife, Bok Soon Kim, and their children, Sun Hee Kim, Yong Bac Kim, Mi Hee Kim, and Young Bal Kim; to the Committee on the Judiciary.

By Mrs. MAY:

H.R. 19224. A bill for the relief of Merton A. Searle and George W. Bowers; to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

CLEAN AIR CARAVAN TESTS AUTO POLLUTION CAUSES

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. PUCINSKI. Mr. Speaker, the Sun Electric Corp., located in my district, has successfully developed the first practical instrument for the measurement of carbon monoxide and hydrocarbons generated by automobiles.

For the first time, State and Federal agencies have available to them a fast, accurate, reliable means of testing vehicles for compliance with emission standards. The automobile industry now has available to it a means of testing vehicles as they come off the production lines.

Auto maintenance shops now have available to them a means of double checking their work to make certain that they have properly serviced an auto to meet emission standards.

On June 15, Atlantic Richfield launched its "Clean Air Caravan" program in Los Angeles. This involved nine panel trucks, each equipped with two Sun model 910 infrared exhaust emission testers. As a public service, the motorists of Los Angeles have been given free tests on their cars to determine the amount of pollution they are generating, and to receive recommendations as to what can be done by the motorists to improve the situation. The response to these tests has been very encouraging.

The auto manufacturers have been making great strides to improve their engines, and the oil manufacturers are now marketing lead-free gasoline. It is now up to the motorist to become conscious of his social obligations to do his part in cutting down on air pollution.

It has been proven that if a gasoline engine is properly tuned and adjusted, little if any undesirable pollutants are emitted. Periodic testing of vehicles with an infrared-type tester can warn vehicle owners that his vehicle is emitting un-

desirable exhaust and should have his vehicle tuned.

The Sun Electric Corp. is to be congratulated for its development of the infrared exhaust emission tester to combat air pollution. This device is both timely and important in our efforts to keep our environment clean and healthy.

I should like to place in the RECORD today an article which appeared in the Chicago Sun-Times concerning Sun Electric's infrared exhaust emission tester, and its testing by Atlantic Richfield.

The article follows:

[From the Chicago Sun-Times, June 17, 1970]

"CLEAN-AIR CARAVAN" TESTS AUTO POLLUTION CAUSES

So you think someone should do something about air pollution. How about starting right in with the family car?

Sun Electric Co. of Chicago and Atlantic Richfield Co. will help out. Sun Electric is now manufacturing equipment that can test the amount of pollutants coming out of your car's tailpipe. It can also analyze what's causing the pollution and thereby enable you to correct the problem at your service or auto facility.

Atlantic Richfield is making the testing system available beginning Wednesday by mounting it on a light truck. The unit will be called the "Clean Air Caravan."

The public service is now available in Los Angeles and "if the response is as good as anticipated," it will be offered soon in Chicago, Philadelphia and other major cities.

"We can expect to reduce hydrocarbon-carbon monoxide emissions substantially in most cars where we find a high-level output of these pollutants," said H. Barton Douglas, a West Coast marketing manager for Philadelphia-based Atlantic Richfield.

The analysis hardware consists of a group of infra-red and electrical sensing units, which quickly measure carbon monoxide and unburned hydrocarbon emissions at engine idle and normal operating revolutions, and a pollution control valve testing system.

While the engine is running, a metal probe is inserted into the tailpipe, a tachometer lead is clampend onto a sparkplug wire and another device is attached to the engine oil filter opening. From the instrument readings trained personnel can determine the existence of such discrepancies as improper air-fuel mixture, dirty air filter or a plugged pollution control system.

"We can analyze and advise on corrective measures, but the actual cleanup of pollution is accomplished by each motorist taking prompt action as advised," said a Richfield executive.

COMMUNISM, REVOLUTION, AND ANGELA DAVIS—HOW MUCH PROOF IS NEEDED?

HON. JOHN ROUSSELOT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. ROUSSELOT. Mr. Speaker, I am appalled by the notion that there are still within the teaching profession apologists for a teacher who is a self-admitted Communist and who is apparently deeply implicated in a crime of the utmost revulsion—the murder of a judge kidnaped in a conspiracy involving convicts on trial.

Mr. Speaker, if there is in this Nation a sickness represented by self-proclamed "revolutionaries," then most certainly the cure to such a serious disease must not lie in allowing its propagation and spread. I have always felt that Miss Angela Davis should never have been hired as a teacher on the UCLA campus. I believe that we owe these students the highest quality education possible, taught by a faculty characterized by high professional competence, untarnished integrity, and the ability to imbue their students with the highest moral and ethical principles.

I am placing in the RECORD a most commendable editorial, published August 24, 1970, in the San Gabriel Valley Daily Tribune, with the hope that the action described by the American Federation of Teachers is directed toward this end, and that ridding our campuses of such clearly destructive influences will strengthen and ennoble the learning process.

The editorial follows:

TOOK A KILLING TO AWAKEN MANY

We think the majority of delegates to the American Federation of Teachers who, during their convention in Pittsburgh, rejected a motion condemning the University of California Regents for not rehiring Angela Davis as a member of the UCLA faculty are right—regardless of their reason.

During the long course of the Angela Davis affair we have objected to the contention that academic freedom was involved in seeking to rid the University of an admitted Communist. Many educators have maintained that it is. Now, however, there has been added damning evidence that she may be complicated in the murder of a Marin County judge. She is a fugitive from justice and has been placed on the FBI "most wanted" list.

Thus, to most people, it has now become evident that Angela Davis is not the type of person who should be on the public payroll as an instructor for our college students.

We say most. For at Pittsburgh one delegate from Los Angeles shouted, "It's Angela Davis today. Tomorrow it can be someone else."

We wish the delegate was correct and that steps were taken to rid our campuses of other instructors and professors who enjoy the benefits of this society, yet seek its destruction through overt acts or insidious undertones.

It is unfortunate that it took the shocking slaying of a judge to awaken some to the danger Angela Davis presents and the realization that she does not belong on our campuses as an instructor.

MAN OF TRUE STATURE

HON. JAMES J. DELANEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. DELANEY. Mr. Speaker, recently there came to my attention a warm tribute to that beloved statesman and former distinguished chairman of the Democratic National Committee, the Honorable James A. Farley, which appeared in the St. Joseph, Mo., News Press, and I would like to take this opportunity to share it with my colleagues:

MAN OF TRUE STATURE

It is tough to be in the public eye, especially in the national spotlight over a long period of years.

That spotlight is revealing. If there are feet of clay it eventually shows them up. Few emerge from that great attention unmarred, unblemished.

But James A. Farley is one who has. For more than 40 years he has been a national figure, yet his image comes through as fresh and unbesmirched as the day he started in politics and business.

This thought comes as a result of a warm and cordial note Mr. Farley sent recently to a top executive on this newspaper. The two have been friends for 43 years, have frequently visited each other back East.

Their friendship antedates even the start of the campaign Mr. Farley spearheaded and which put Franklin D. Roosevelt in the White House for a stay of 12 years, one month, and eight days.

James A. Farley is high in the national esteem. Of him it can fittingly be said, "There is a man."

THE 31ST ANNIVERSARY OF THE GERMAN INVASION

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. DERWINSKI. Mr. Speaker, the Polish Government in exile continues to function in London as the official voice of the Polish people. Its President, His Excellency August Zaleski, traditionally issues messages to the Polish people to commemorate events of major historic significance.

On September 1, the 31st anniversary of the German invasion of Poland in 1939 which marked the beginning of World War II, President Zaleski issued the following message:

Once more on September 1st we have an anniversary of the attack upon Poland by Nazi Germany which, in collusion with Soviet Russia, unleashed the Second World War.

This war caused immense suffering for many peoples. Of all the world's nations, Poland underwent the greatest sacrifices, both in the calamities to her people and in cultural and material losses.

The Poles never lost hope, however, and fought in the ranks of the Polish Home Army and on all battlefields of the last war in units of the Polish Armed Forces maintaining their faith in the victory of the ideals which constitute 1000 years of Polish historical tradition.

Unfortunately, the end of hostilities did not bring Poland her long awaited liberty. The only country to derive benefits from this war was Soviet Russia which was co-responsible for its outbreak and which, contrary to the principles of the Atlantic Charter, forcibly seized many regions in Europe and Asia.

It is the duty of Poles in the free world to remind the public opinion all the injustices inflicted upon the Polish Nation during the Second World War and after its termination, and to maintain the hope of the final victory of liberty and justice.

In addition, Mr. Speaker, August 15 was the 50th anniversary of the victory of Poland over Russia in the Battle of Warsaw in 1920 which in the days before Yalta was celebrated as "Polish Soldier's Day." I insert in the RECORD at this point the text of President Zaleski's statement commemorating this date in Polish history:

FIFTIETH ANNIVERSARY OF THE VICTORY OF POLAND OVER RUSSIA

Citizens of Poland and Poles in the free world:

The Battle of Warsaw in 1920 terminated the victorious Polish-Russian war. It had started by order of Commander Joseph Pilsudski, when the First Cadre Company of the Polish Forces/nucleus of Polish National Army/crossed the boundary of the Russian-dominated part of Poland on August 6th, 1914, followed by the Polish Legions.

Similarly on August 6th, 1920, the Chief of State and Commander-in-Chief, Joseph Pilsudski, "lonely in his study at the Belvedere Palace" decided on his plan of genius for the attack against the Soviet-Russian armies besieging the capital of Poland. By a Napoleonic manoeuvre from over the river Wieprz, he broke up and forced to retreat those very armies which were intending to destroy Poland, following the order "over the corpse of Poland to the West".

This great Polish victory in 1920 safeguarded the freedom and independence, not only of the Polish Republic, but also of the neighbouring nations which had regained their independence after the First World War. This victory also stopped further progress of the Red Army towards Western Europe, and protected it from the terror of Russian imperialism. That it could happen was entirely due to the attitude of the whole Polish nation and the bravery of her soldiers.

The Second World War started by Nazi Germany in complicity with Soviet Russia proved that Poland's victory in the Battle of Warsaw in 1920 prevented the Russians putting into action their plan of comquest at that time. But, that the rulers of the Kremlin still adhere to this plan, is shown by their present strategic moves on the continents and oceans of the world.

In face of these ominous aims of Moscow, and with the memory of the world-famous victory of 1920 which saved Poland from Russian slavery, we Poles in the free world should be ever watchful for every step in the domain of politics and strategy which could endanger the rights of Poland; and in full agreement we should protest aloud at any movement appearing on the horizon to threaten the security of Poland and Europe. And we should always remember that for each protest to be of real weight and strength, complete accord and unity of action is necessary in our political programme of regaining freedom and independence for the Republic of Poland.

The example of such unity was given in 1920 by the Council for the Defence of the State and the Government then in Warsaw. This national concord greatly contributed to the victory in this "decisive battle of the world", in remembrance of which was established in independent Poland—"Polish Soldier's Day", which the nation celebrates on August 15th, on the festival of the Assumption of the Virgin Mary.

THOMAS KESSING DIES IN VIETNAM

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. LONG of Maryland. Mr. Speaker, Sp4c. Thomas E. Kessing, Jr., a courageous young man from Maryland, was killed recently in Vietnam. I should like to honor his memory by including the following article in the RECORD:

THOMAS KESSING DIES OF WOUNDS—SILVER SPRING YOUTH WAS KILLED BY VIET MINE

SILVER SPRING, August 27.—Spec. 4 Thomas E. Kessing, Jr., 19, of Silver Spring, died Tuesday of wounds he received in an enemy mine explosion in Vietnam, the Department of Defense announced yesterday.

He was wounded by the explosion of a Claymore mine August 8 while on a night patrol about 30 miles north of Saigon in Binh Doung province.

Specialist Kessing was transferred August 16 to the 249th General Hospital in Osaka, Japan where he died of internal injuries and infection from his wounds.

He was awarded the Purple Heart and the Army Commendation Medal for heroism as a result of the August 8 incident.

The citation states that Specialist Kessing "contributed immeasurably to the success" of the night patrol.

He had recovered from a malaria attack just a week before he was wounded. He served 58 days in Cambodia, according to his father.

At the time of his death he was a member of the 25th Infantry Division. He had been recently transferred from Company D, 5th Battalion, 3d Brigade, 9th Infantry Division.

Specialist Kessing enlisted in the Army on August 15, 1969. He completed his basic training at Fort Bragg, N.C. and his advanced training at Fort Gordon, Ga. He began his tour of duty in Vietnam January 10, 1970.

He was born in Takoma Park, Md. He attended Montgomery Blair High School and received a high school equivalency diploma after entering the Army.

An avid swimmer, he spent the summer before he enlisted as a life guard and manager of the swimming pool at an apartment house in Silver Spring.

After his three-year term of duty in the Army was completed he had planned to become a radio disc jockey.

Specialist Kessing is survived by his parents, Mr. and Mrs. Thomas E. Kessing, Sr., of Silver Spring; three sisters, Mrs. Mary Jane Hottinger, of San Francisco; Kelly L. Kessing and Patricia Kessing, both of Silver Spring; and his grandmothers, Mrs. Oliver O. Kessing, of Norfolk; and Mrs. Mami Beck, of Chapel Hill, N.C.

PRECEDENTS IN WATER POLLUTION CONTROL SET IN OREGON

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. ULLMAN. Mr. Speaker, Oregon is justifiably proud of its precedent-setting efforts to control air and water pollution and preserve the uniquely high quality of its environment. The development of a statewide comprehensive water pollution program in Oregon dates back to 1938. In 1951, the Oregon Legislative Assembly established the first statewide air pollution control program in the Nation. Last year, Oregon created an independent department of environmental quality with expansive policy-making and law-enforcement powers.

As a recent article in the New York Times points out, Oregon has tough antipollution standards, perhaps as tough as exist anywhere in the country. The article is a study of efforts to bring the pollution-ridden Willamette River back to life. It describes the difficult job of renewing our natural resources once they are polluted, and makes clear this is a long and very gradual process. It also points out that environmental control is a matter of adept politics and adequate incentives.

I commend it to the attention of my colleagues:

TOUGH RULES SAVING A DYING OREGON RIVER

(By E. W. Kenworthy)

PORTLAND, ORE.—One day last week, the fall Chinook salmon began to flow out of the Columbia River into the Willamette, swimming 25 miles through a highly developed port-industrial complex at Portland Harbor reach, struggling up a man-made fishway over the 50-foot falls at Oregon City, and finally fighting their way to the upstream headwaters where they will spawn.

As the Chinook struggle upstream, tabulators at the falls count each one, hoping for another increase in the run. If the count is up, it will be an event of some national significance—visual proof that a Federal-state program to clean up the Willamette River, until a few years ago one of the nation's foulest, is continuing to make steady progress.

Antipollution officials across the country are watching the Willamette clean-up effort for guidance on how to deal with extreme levels of pollution from sewage and industrial wastes.

COMBINATION OF FACTORS

Among the observations is that the improvement of the Willamette's water quality—which officials point out still has a long way to go—resulted from a fortunate combination of factors: strong public outcries, with resulting political reaction and commitment, good state and Federal cooperation, forceful leadership, tough standards and the cooperation of industry.

The gradual increase in the fall salmon run—from a meager 79 in 1965 to 6,957 last year—already backs up more sophisticated scientific evidence that the Willamette cleanup indeed is working.

In part, the increased salmon run can be attributed to a new, $4-million fishway at the falls to help the salmon over the hump and the augmenting of flows around the dam at periods of critically low water. But, as the Department of Environmental Quality said in a report this month: "Without cleanup of the river, investment in the new fish ladders would have been an almost wasted expenditure."

The Chinook and other migrating fish shy away from severely polluted water. A chief reason is lack of oxygen supply—a major indicator, along with the amount of disease-bearing bacteria and dangerous chemicals, of the health of a waterway.

Fishery biologists say that migrating fish need water with five parts per million (p.p.m.) of oxygen, and that if the oxygen reaches below four p.p.m., fish may not enter a river. In years past, during low water in the summer and fall, the dissolved oxygen supply often reached zero in the most polluted Portland Harbor reach of the Willamette.

"BIOLOGICAL CESSPOOL"

Besides creating other problems, the huge amounts of organic wastes dumped into the Willamette voraciously consumed the river's oxygen in decomposition.

Inundated with heavily organic industrial wastes from nine pulp and paper mills, as well as vegetable processing and meat-packing plants, other industries and firms, the lower Williamette was described by the Izaak Walton League as late as the spring of 1967 as a "stinking, slimy mess" and a "biological cesspool."

Between Portland and Willamette Falls, globs of bacterial slime that fed on nutrients, mostly wood sugars from the pulp mills, formed beneath the surface and mats of decaying sludge, dislodged from the bottom by the formation of gasses in the summer-

heated river, rose to the surface and floated like rafts down the river until they disintegrated and sank to the bottom again. Life in such water was scarce indeed.

By contrast, Kelly Conover of the Oregon Fish Commission said in a recent interview that he believed that within a few years the fall chinook run would reach 110,000, and Kenneth H. Spies, director of Oregon's Department of Environmental Quality, reported that the quality of the river had improved to the point that much of the stream above the falls was "reasonably safe" for swimming.

The main stem of the Willamette is 187 miles long. The state's four larger cities—Portland, Salem, Corvallis and Eugene—lie on it. Serious pollution dates back to the late twenties. In 1938, the voters approved creation of a State Sanitary Authority, forerunner of the Department of Environmental Quality established in 1969. When the Authority began its pollution control program in 1939, there were only 23 municipal sewage plants in the valley, and none was on the river's main stem, where all major cities discharge raw sewage into the river. All valley industries dumped their waste into the river without treatment.

PULP AND PAPER MILLS CITED

Municipal progress was slow. It was not until 1957 that all cities on the river had installed primary treatment of sewage—the settling out of solids which removed 35 per cent of organic matter. Industrial progress was even slower. In 1957, a Department of Interior report found that 70 per cent of the oxygen-demanding waste produced in the valley came from the nine paper and pulp mills, and 90 per cent of the waste actually entering the river came from these mills.

By far the largest share was contributed by five sulphite-process plants—two Publishers Paper Company mills owned by the Los Angeles Times at Oregon City and Newberg, two crown Zellerbach Corporation mills at West Linn and Lebanon, and a Boise-Cascade Corporation.

The turning point came in 1967—a turning point that state and Federal officials attribute to a concatenation of luck, timing, politics and personalities.

In the governorship campaign of 1966, Robert Straub, the Democratic candidate, noted public concern and made pollution his principal issue. Tom McCall, the Republican candidate, was only too ready to do battle on this ground. As a television broadcaster, Mr. McCall, in 1967, had made a documentary film entitled "Pollution in Paradise."

In the campaign, the two candidates outdid each other in promising to restore the state's environment. The campaign set the climate for future achievement.

GOVERNOR TAKES CHARGE

Mr. McCall won. Soon after he took office, the man who had been chairman of the State Sanitary Authority for 25 years died. The Governor wanted to appoint John D. Mosser, a former State Representative, to the post. But he also wanted Mr. Bosser to serve for a few months as Director of Finance and Administration, and Mr. Mosser agreed.

Thus, to dramatize his own commitment to environmental reform the Governor appointed himself chairman of the Sanitary Authority for the interim. He ordered hearings throughout the state as a preliminary to issuing standards of water quality for every river in the state.

The authority was aided by two Congressional acts—the Water Quality Act of 1967, which required the states to set water quality standards for interstate waterways, and the Clean Water Restoration Act of 1966, which increased Federal funds to aid cities in building sewage treatment plants.

In May 1967, Oregon became one of the first three states to have its standards accepted by the Department of the Interior. At the same time that it issued its standards, the authority also published an enforcement plan dealing with every stream and every city and industry on each waterway. The Governor then stepped down as chairman and appointed Mr. Mosser, who set about the job of enforcement.

In a recent interview, E. J. Weathersbee, deputy director of the Department of Environmental Quality, explained that, because of public support, Mr. Mosser had no trouble with either the legislature or industry.

TOUGH STANDARDS SET

"Mosser," he said, "was brilliant and persuasive, logical, and tough when he had to be, and industry fell in line. He just let them know we were going to clean it up, and that was it, and nobody argued with him."

The Sanitary Authority not only set standards for the Willamette below the falls—classified as an interstate waterway because of tidal flow—but set equally tough standards for streams wholly within the state.

It also set a discharge limit on oxygen-consuming wastes for every municipal sewage plant and every industry.

In doing so, it made no provision for future growth, declaring that the limit was all the stream could take and maintain its quality, and that future growth of a city or plant had to be taken care of by increased efficiency in handling pollutants. Sulphite pulp mills were given until July, 1972, to install primary and secondary treatment and recovery systems for chemical liquors.

Industry was given an incentive to meet these imposed standards and increase efficiency—a write-off of 5 per cent a year on state corporate taxes until 1978 to help cover the cost of installing pollution controls.

What have been the results of this program on the Willamette?

By late 1968, all cities in the basin had installed secondary treatment plants for sewage. By 1968 all paper and pulp mills had installed primary treatment and were removing 100,000 pounds of settleable solids daily that had been going into the river.

At present, five of the nine mills have both secondary treatment and chemical recovery systems; one has chemical recovery, and the rest have until July, 1972, to complete installation of secondary treatment and chemical recovery. The only foot-dragger, according to state officials, is the Boise-Cascade plant at Salem.

By 1972, Mr. Spies predicts, the overall reduction of municipal and industrial waste in the basin will be between 90 and 94 per cent.

Oxygen-consuming discharges of the paper and pulp mills, which formerly accounted for 70 per cent of the oxygen-demanding waste, will be 38,500 pounds a day, down from 130,000 pounds in 1969, and only slightly above the 35,000 pounds expected discharge from city sewage plants.

One result of the controls has been that the waters of the Portland Harbor reach are meeting the standard of five parts per million of oxygen set by the state and approved by the Department of the Interior in 1967. The lowest average monthly content of oxygen taken from the water has gone from 1.5 p.p.m. in 1957 to 3.3 in 1967 to 5.6 in 1969.

At the same time, anyone taking a boat trip up the Willamette today would hardly call it a clean river. Federal and state pollution officials do not contend it is. They recognize vast problems still to be overcome—so-called "non-point discharges from logging, soil erosion, animal feed lots, irrigation seepage, and, of course, population growth.

Nevertheless, they point to the Chinook in the fishway and contend that, at present anyway, they have "a river on the way to restoration."

THE POLITICS OF PEACE

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. OTTINGER. Mr. Speaker, the August 1970 edition of the Washington Monthly includes an article by Mr. Sam Brown that is one of the most sensible and reasoned histories of the antiwar movement yet to appear in print. Mr. Brown points out that those opposed to the war on moral grounds have always decried violence and have consistently attempted to enlist the wider community in their cause, from blue-collar workers to Members of Congress. He enunciates the direction the peace movement must take and the clear need for leadership from public officials, and I urge all those who wish to see an end to the carnage in Southeast Asia to pay heed to the responsible guidelines set forth in this cogent analysis. I urge all those concerned about this war and about the avoidance of future Vietnams to give this article their most careful attention.

The article follows:

THE POLITICS OF PEACE

(By Sam Brown)

When I visited the North Vietnamese and NLF representatives in Paris last February, they made it clear that they had never counted on the American left to end the war. Madame Nguyen Thi Binh, the foreign minister of the Provisional Revolutionary Government (of the NLF), remarked that she found student radicals very sectarian and reluctant to touch political power. She continued that the confused assortment of political objectives on the left—from legalizing marijuana to overthrowing the government to providing free abortions—dilutes the political impact of the peace movement. The result, she suggested, is that the Vietnamese people and American soldiers carry the burden of America's social problems. Insofar as unrelated issues are tied to the peace movement, weakening it, Vietnamese people and American soldiers die every day because the peace movement has exported the costs of America's social problems to Asia.

I found these Vietnamese revolutionaries far more thoughtful than most young American revolutionaries. Their private conversation was radically different from their strident, ideological press releases, and they seemed to bear little malice toward the American people. They didn't express hatred for Middle America, or even for the soldiers in Vietnam. The negotiators seemed to be tough-minded realists, who expect a long war and don't believe that America is anywhere near collapse. In short, these communist leaders are very connected to reality, where political self-delusion can cost people their lives.

One such delusion within the American peace movement has been the notion that we can retain a private dimension of political morality for ourselves. We define the significance of peace rallies in such a way that we cannot lose our purity. So if Jerry Rubin or the Black Panthers offend people from a peace platform, we conclude that Jerry Rubin's style is his own business and the Black Panther platform is logically separable from the war—therefore the offended people should pay attention to the anti-war political message independently of its context. We cannot be responsible for their confusion or stupidity.

Thus doves reason that they have the best of situations: if the war ends, they can take credit for political effectiveness; if it continues, they have personally separated themselves from the war policy. The problem, as Madame Binh pointed out, is that there is no private realm for people dealing with the politics of war. The significance of our acts in the peace movement is politically determined, not privately defined. Every time a 16-year-old high school student steps off the curb for a demonstration, there is a political effect. The war may be nearer or further from its end, according to the political impact of his action. This places an awesome responsibility on those who lead others into action.

The responsibility will be increasingly important as it becomes clearer that President Nixon is committed to some kind of non-defeat in Indochina which he calls "winning the peace." There is no evidence in his history that he could withdraw all troops from Vietnam and stop all bombing if doing so would be described as a defeat. This means that building peace politics is not superfluous. American, Cambodian, and Vietnamese bodies are still being blown apart every day, and only a peace movement which reaches Richard Nixon's constituency can stop it. Doves must find lessons in the past five years of anti-war activity to avoid both the errors of previous strategies and the fiction that the war will dissolve of its own accord. Neither Vietnamization nor a naive peace movement can end the war.

Since November, 1969, the President and Vice President have used the apolitical purism of many committed peace people to split the non-moral opposition voters make political decisions largely on issues of tone and style rather than on the basis of rigorous foreign policy analysis. The right wing of potential peace supporters—those opposed to the war for a variety of non-moral reasons, ranging from its economic cost to the futility of seeking a conventional military victory—tend to cave in to Presidential authority, especially when the tone of his message is more congenial and positive than that of the doves who hold that we cannot grind an honorable peace out of a dishonorable war. The potential peace voters respond favorably to the calm, authoritative demeanor of the President behind the mahogany desk during a television broadcast, and they like neat, clean, thoroughly American behavior. They don't like long hair, campus protest, or, in short, anything which irritates the nerve endings of middle-class values. They may dislike the war, but they dislike radicals far more. Moreover, they inherit this country's anti-intellectual legacy, so that if the President calls for "team spirit" and the peace movement calls for "communal solidarity," they go with the President. For them, "communal solidarity" smacks of the red specter and academic snobbery.

The Middle Americans who favor an early end to the war hold the political balance between continued Nixonian Vietnamization or worse, and an early end to the war. A substantial majority of them would vote for "withdrawal from Asia as rapidly as possible commensurate with the safety of the troops" if the arguments pro and con were presented in commune and communicate with the non-ideologues who want to end the war, and his message is not one of rapid withdrawal but of "winning the peace" and avoiding humiliation. And except for the 1968 campaigns and a brief moment last October 15, the peace movement has *not* been able to talk with, or feel with, its potential allies. The apparent result is that the President has disarmed his domestic critics while the peace constituency has grown larger than ever. I think he will lose on his peace-with-victory tightrope in the long run; but for now, even after Cambodia, the combination of support for this President and a peace majority is another paradox in the string of Catch-22 insanities which have characterized the war—prepared by a liberal President who spoke of ending the Cold War, begun by a President elected on a peace platform, waged by executive order to export democratic self-determination to half of another country, escalated in the interest of protecting the troops, and continued on the grounds that it is the shortest road to peace.

Those of us in the peace movement who have worked for five years on campuses, in campaigns, and in community activities like the Moratorium bear a large share of the responsibility for our alienation from the potential doves in Middle America. The fact that they support the President in a crunch follows partly from historical accident, partly from errors in political judgment by the morally committed, and partly from a lack of courage among the politically astute.

Insofar as the split within the peace movement stems from the student base of most anti-war activity, historical accident is largely to blame. I do not think students would have taken themselves seriously as a political force had the war not begun during the civil rights movement. In the early Sixties, young people learned that voting and precinct meetings were not the only effective forms of political activity, that extra-legal demonstrations worked in the face of a moral horror, and that American leaders often displayed both cowardice and hypocrisy in race relations. The civil rights movement, with all its implications about American politics, was almost a necessary condition for anti-war activism on the campuses.

It was also important that the war was begun by a Democratic President, for Lyndon Johnson's presence in the White House silenced many of those who are now doves against a Republican President. Hubert Humphrey, Arthur Goldberg, Edmund Muskie, Larry O'Brien, Adlai Stevenson III, Birch Bayh—none of the party establishment came close to breaking with Johnson. Even the intellectual community, which might have been expected to provide some leadership was so closely tied to the Administration that its members—McGeorge Bundy, Francis Bator, Richard Neustadt, Zbignew Brezezinski, and so on—were reluctant to speak out at first. So were the foreign policy experts, such as Roswell Gilpatric, George Ball, Averell Harriman, and Cyrus Vance. The result was that students were the original peace constituency almost by a process of elimination. Through the draft, we felt the war with the kind of harsh self-interest which motivates most political activity. The first major anti-war demonstration took place in front of the White House in the spring of 1965, organized by SDS. Senators Morse and Gruening spoke, sealing the alliance between students and brilliant eccentrics. When Eugene McCarthy announced his candidacy in November of 1967, everyone assumed that students would be his most consistant supporters, although all the pros, including Robert Kennedy, advised McCarthy against stressing student support.

To say that students have formed the core of anti-war activism does not mean that relative to other age groups. That is part of the silent majority myth. But I do think that young peace activists tend to have made certain moral judgments about the war, beyond pragmatism. This is a source of strength for the peace movement in that it provides the strongest motive for opposition to the war and also removes the recurrent trap of wavering doves: the victory wish. People who believe that the war is immoral are tempted to dampen their activity when a vision of conquest is dangled before their eyes. In fact, most of us who have worked to end the war for some time believe that any semblance of a military victory in Vietnam would be disastrous for the United States. It would convince many Americans that the war was right and that it could be successfully repeated elsewhere. Also, a military triumph would go a long way toward replacing the Jeffersonian-revolutionary image of America as a place of hope with a Roman image of this country as a conquering empire.

If the conviction of young people has been a source of strength, it has also been responsible for much of the self-containment of the peace movement. And the significant fact is not that active dissent began on the campus, but that it has largely stayed there.

When anti-war activities began on the campuses, most of us were convinced that political education could end the war and that America was sufficiently biased against foreign conflicts to make it impossible for the government to wage war with substantial internal opposition. The draft forced us to confront the war early; and since we reached our decision to oppose American Vietnam policy largely through an intellectual process, we were confident that the country could do the same. So there were teach-ins on Vietnam in 1965 and 1966, and the Vietnam Summer of 1967 was originally called Teach-Out, a campus effort to reach into the community.

The weaknesses of the citizen education campaign became apparent very soon. For one thing, students presupposed a level of basic knowledge about Vietnam that simply didn't exist in most voters. If, in 1965, a student went to a doorstep and the lady said, "I don't know, the President knows more than we do," he became quickly frustrated with such blind deference in the face of facts about the war.

Students found that most voters employed a contorted decision-making process to analyze American involvement in Vietnam. It seemed that they should have been against the war until they knew enough about the issues to argue for it. Instead, people supported the war until convinced that America was wrong, placing the burden of proof on the students and then being fairly complacent about studying the evidence. Many students found it morally repugnant that a citizen could support Lyndon Johnson's war without having read Bernard Fall, the Vietnam hearings, or even Douglas Pike and the SEATO Treaty, without knowing the history of the Viet-Minh or of French colonialism in Indochina, and knowing little about Ho Chi Minh, Marshal Jean De Lattre, or Ngo Dinh Diem.

It became quite easy for students to react against Lyndon Johnson's use of Middle America's historic anti-intellectualism with a kind of academic chauvinism readily learned from prominent professors. Thus it followed that since every intelligent person was against the war, anyone who supported LBJ was a fool, immoral, or both. With President Nixon reduced to visceral patriotism and respectable demagoguery to carry the war, the argument has been pushed to its conclusion: that people who support the war for immoral or irrational reasons should not count. This judgment is often felt but seldom expressed, because it runs headlong into the left's emphasis on participatory democracy. Unfortunately, irrationalities matter in democratic politics, and peace is not here just because we want it, or even if we can demonstrate on paper that it's a good idea. In order to build a successful peace movement, one must believe that Middle America should count, even after a week's canvassing in Ogallala, Nebraska, or Peoria, Illinois. The alternative is to join with classical aristocrats, who find the paper ballot a rather crude and absurd method of making political decisions.

Students found it difficult to break the ethos and life style of the campus in order to spend their time in homes and businesses. Canvassing operations and education campaigns require a great deal of organization

and commitment to work which is generally tedious. A demonstration, on the other hand, only requires going someplace for a few hours, at least for the non-organizers. The atmosphere at a demonstration is one of a communion of peers, often with recreation and a heady emotional sense of solidarity. Moreover, the civil rights movements had given demonstrations an overtone of moral outrage, and that was precisely the message that the peace movement wanted to communicate: that the Vietnam War is a moral outrage.

Unfortunately, anti-war demonstrations did not succeed in dramatizing the moral aspects of the war, largely because the war was taking place halfway around the world. The sit-ins in the South could demonstrate the moral imperatives of the civil rights movement. One could see the violent clash of behavior against principle, and the connection to the law was clear. Peace demonstrations at draft boards and troop shipping stations attempted to make the same point regarding Vietnam, but the appeal to conscience was too vague or too strained. McGeorge Bundy and Robert McNamara were tucked away in an impeccably proper bureaucracy. They never delivered any napalm in person, and certainly never wore the coarsely hostile face of a Bull Conner.

Civil rights demonstrations had another advantage: they could appeal to the political self-righteousness of 75 per cent of the country in order to defeat the South. This was a significant political lever which the anti-war movement has never had. In order to accept the idea that the Vietnam war is immoral, one must admit that his whole country is capable of perpetrating great wrongs and that he himself is partly culpable. This is difficult for any of us to do. It is far more difficult than deciding that the South's brutal racism is immoral in the face of the non-violent courage of Martin Luther King.

Vietnam demonstrations also developed a high existential content, especially as the war dragged on beneath Ruskian platitudes. At some point it became necessary for all of us to *do* something, regardless of the political effect, in order to separate ourselves from the government. This year's May 9 demonstration was a good example. There had to be some response to the Cambodian invasion and Kent State. Because something had to be done and peace people knew how to produce demonstrations, a quick demonstration was put together. The May 9 rally in Washington was cathartic for everyone already committed against the war—a communion of the wounded, complete with a mass swim-in in the Lincoln Memorial reflecting pool and speeches about every conceivable issue on the left. But the rally had little political effect on those not already on our side.

The failures of demonstrations as a peace tactic tended to restrict the morally-based anti-war movement to the campus. And, during gestation on the campus, it continually moved toward the left. The enemies became generalized into the System and the solution into revolution. Anyone who added a new plank to the canons of the left was considered purer than his predecessor, and the movement shifted in order to identify with its purest elements. People became unwilling to accept those opposed to the war for less comprehensive reasons. They had to be written off as opportunists and moral reprobates.

This is the first vicious cycle of the student peace movement: the longer it fails to end the war, the farther left it moves, splintering itself into multiple groups in the process, which in turn makes it more difficult to develop the new constituencies necessary to end the war.

I cannot argue strongly for a single-minded peace strategy without considering the emotional costs. Obviously, there are reasons for leftward sectarian impulses, growing out of the history of the Sixties—when this country identified many domestic problems and solved almost none. There is good reason for a healthy cynicism. A young person in this country has seen little but war, the draft, riots, racism, assassinations, pollution, and governmental ineptness since he came into political awareness. A person who is 21 has dim memories, if any, of the early Sixties, when there was a great deal of hope in America.

On a deeper level, there is a strong sense among young people of alienation from the values which built the American economy—impulse repression, acquisitive drive, and status mobility. These frustrations add up to a strong motive for believing that America's problems are insoluble, and that the war is but a symptom whose termination will be of little use.

Finally, there is a feeling that the war cannot be ended on terms other than the Carthaginian Peace acceptable to the Veterans of Foreign Wars. Obviously, any tough-minded political discipline toward ending the war is senseless if the chances of success are zero. The existential alternative is to keep one's purity, protect one's life style, and demonstrate a personal separation from the war policy.

This is a dilemma for those who believe that the war is wrong: defeat appears likely and recommends that people withdraw into a personal purity, while ending the war requires that people move toward Middle America and become politically effective.

To unravel this problem, I think a few false issues must be separated out. First, personal appearance, language, and life style have nothing to do with the substance or purity of one's political views. Behavior that is offensive to Middle America neither establishes nor identifies real political differences; it merely offends Middle America. Burning the flag or shooting obscenities at an anti-war rally is for many doves a shortcut for the years of hard work which would make real political enemies on substantive issues. If done for its political effect, such action creates needless liabilities and fosters the self-deception that one is politically righteous in proportion to how much he is despised.

Another kind of false purism follows from an inquisitional tendency on the left to exclude as many people as necessary to insure the holiness of the group. This is the opposite of the political instinct, which is to include as many people as possible in the interest of achieving an objective. You take your allies where you can, not necessarily making heroes of them, but keeping them in the camp.

It's very dangerous to generalize a personal code of moral absolutism into politics. Many of us cannot accept the draft for this war on personal, moral grounds. But I find it ethically untenable to suggest that everyone who doesn't agree with us is automatically immoral—unworthy of respect and human consideration.

Such obsolutist judgment would represent a curiously non-situational ethic for a generation which acccepted and popularized situational ethics in sexual relationships. Middle America is still sexually Victorian on the whole, but politically pragmatic, while students are politically absolutist and sexually situational. One could, as Richard Nixon has, drive a truck through the gap.

On either side of this gap the combatants act like members of the old religious sects, where different rules govern one's conduct toward people outside the group as opposed to those within it. Thus, it becomes possible for an honest, fair-minded judge to display a total disregard for due process in dealing with a long haired radical. On the other hand, it is possible for people on the left—whose internal ethic calls for a loving ethos, an understanding of human weaknesses, concern for the poor, and non-violence—to direct blind hatred toward Middle America, to call people pigs, to glorify militance, and to display considerable cultural condescension toward "hewers of wood and drawers of water," from tobacco farmers to cab drivers to hard hats. The response is obvious.

Sect-like behavior is the source of a second vicious cycle within the peace movement. People in the middle respond to the sign language involved and to the external codes of conduct, not the internal ones. Sectarian violence on the left is the most salient aspect of what the press calls a peace-youth cult.

Perhaps strategic violence in the anti-war movement is yet another legacy of the civil rights movement during which young people have seen that pompous official statements on the futility of violence consistently ring false against the scramble of politicians to throw money and concern into any urban riot area. But most Americans don't feel guilty about the war, nor do they feel that young demonstrators are its victims. Again, the moral imperatives of the peace movement have been different and weaker than those of civil rights. In any case, I find political violence wrong in principle, and anti-war violence is also strategic nonsense, creating even more needless enemies than flag-burning.

Sectarian violence on the left is the complement of the hard-hat phenomenon on the right. They represent the culmination of the familiar process of polarization.

The real crux of the dilemma over protecting principles comes when it is necessary to make judgments about issue priorities—to choose among contending goals in the interest of effectiveness. This is particularly difficult for young people, who dislike the notion of effectiveness itself because it represents to them the very craving for success that alienates them from America. They have seen too many allies announce with supercilious dignity that they are going to be effective within the system and then drown all moral commitment in self-advancement.

Many older doves not so alienated from success or the work ethic are also wary of the effectiveness trap. Some can remember the Cold War Fifties, when liberals adopted Brooks Brothers suits to "effectively" protect those falsely accused by Joe McCarthy. And liberals continued to adapt themselves to the times until they decried the missile gap in 1960 so they could be effective in making social reforms and finally began the Vietnam war to demonstrate that they were more flexibly effective anticommunists than the hawkish Republicans. In a sense, the trap is responsible for the whole Vietnam mess; for the last generation of liberals made an ideology of effectiveness and finally came to believe in their own tactical compromises.

In order to handle the effectiveness trap, people must have enough self-confidence to believe that the steps necessary to end the war will not erode their commitment to other issues. Adopting a style that does not offend Middle America is itself no compromise of principle. The danger comes when liberals transform Brooks Brothers suits into political disaster, and today's doves must be able to tell when an acceptable style becomes a substantive sell-out.

People must also believe that the war can be ended. Otherwise, they join many students in the non-effectiveness trap—if you decide that it is impossible to win on anything, it makes sense to go down to defeat shouting the pure gospel on as many moral issues as possible. If, on the other hand, doves decide that the peace movement can in fact end the war, then the purest anti-war position is the one which ends the war fastest without compromising the principle that the war is wrong. That position would undoubtedly be tough-minded in that

priorities must be chosen and sacrifices made in the interest of ending the war. Jerry Rubin may have to be excluded from a platform to keep John Lindsay, because, coldly, Lindsay is far more politically valuable than Rubin in any successful anti-war strategy. The position would also be painful—it would even be necessary to cultivate dovish potential among racists. But the position would also recognize the daily blood cost of the non-effectiveness trap.

I think everyone who has a moral commitment against the Vietnam war feels some of these drives toward left sectarianism. Certainly I do. On the night of the Cambodian invasion, part of me wanted to blow up buildings, and I decided that those who have waged this war really should be treated as war criminals. There must be a certain point in the midst of an insanely malevolent situation at which any sane person wants to become a maniac. Discipline and caution appear deceitful.

But despite past frustrations and failures, I think that political self-discipline is precisely what is necessary to end the war. My own feeling is that this war *is* in fact less intellectually intractable than the long-run problems of pollution or the distribution of wealth in America, and less emotionally deep-seated than alienation from the Protestant work ethic or the overwhelming problem of race. But it throws up an enormous psychological barrier to the perception of these problems, simultaneously draining the nation of lives, resources, hope, and conscience. Therefore, I think that ending the war is a necessary first step toward meeting more difficult problems, even though ending the war may mean short-run sacrifices of efforts to cope with them.

Also, you have to have faith that the American people will choose the more humane political path when confronted with clearly stated alternatives, and then you work to state the peace choice persistently in the most acceptable style. Until you lose that faith permanently, left sectarianism must be regarded as politically foolish, and only lack of courage causes people who believe so to remain silent.

These realities have been clear for some time. They were paramount in the plans for the Vietnam Moratorium, drawn up in the spring of 1969, when the politics of Vietnam were considerably less carnal than they are now. Nixon and Agnew had not wrapped their policy in the flag, nor had polarization proceeded to the point at which many hawks would cheer the killings at Kent State. But it was clear, at least to our ideological minds, that the President was not going to withdraw from Vietnam quickly and blame the consequences on the Democrats. This option, which so many commentators thought likely because of its "peacemaker" attractiveness and the fact that it would direct any McCathyite backlash at the Democratic Party, was rejected in favor of a Presidential desire for an outcome with victory written on it somewhere. It seemed that he was going to get out of Vietnam as slowly as possible, while selling the idea that he was getting out as fast as possible.

By spring, many doves had recovered enough from the doldrums of the 1968 campaign to consider new peace initiatives. Jerry Grossman, a Massachusetts businessman, first suggested the outlines of what became the Moratorium. Beginning with a student base, because that was all we could count on, we wanted to develop a single-issue citizen organization with sufficiently electric appeal to create a majority for withdrawal from Vietnam.

When we announced the Vietnam Moratorium in June of 1969, the four coordinators felt that it would indeed take a great deal of political self-discipline to succeed with our strategy: to gradually attract new peace constituencies on the right without either making unacceptable compromises or cutting off the left. We had to avoid following the ADA path (drifting to the right ideologically *without* gaining new support) and alienating the left at the same time.

The Moratorium plan for October 15 was to start on the campuses and organize outward into the community, seeking to slowly build peace constituencies. The public message was immediate withdrawal, which was then a radical position relative to the entire American political spectrum. We hoped to start in October with one day's cessation of "business as usual" and increase the moratorium period cumulatively by one day each month until the war ended. The initial call and the founding statement were very centrist documents. We tried to set a moderate tone in everything—from the choice of the word "moratorium" rather than "strike" to our constant encouragement of activities that would appeal to people just to the right of our student base—such as vigils, church services, candlelight ceremonies, and community canvassings. If we had started with more money, more visibility, or more Congressional support, we would have deemphasized our campus base even more; but, lacking all three, we had to organize from the campuses outward. Our specific targets for October were the social groups which had displayed sympathy for the peace movement—the clergy, women, senior citizens, doctors, lawyers, and educators—and we also attempted to reach labor unions and minority groups.

Across the summer of 1969, we received little press coverage and less support from Congressmen and Senators. David Mixner did most of the browbeating on the Hill and got nothing but smiles and encouragement from everyone but the handful of consistent doves, such as Congressmen McCloskey, Adams, Brown, Reid, Edwards, Koch, Ryan, Fraser, Riegle, and Ottinger and Senators McGovern, Hughes, McCarthy, Hatfield, and Goodell. There was a perceptible lack of raw courage on the part of most elected officials. Part of it was rationalized by the "extended honeymoon" argument that President Nixon would extricate us from the war if he had time enough. There was also a strong reluctance to criticize the President, growing out of a contagious inability to distinguish between the office and the man in it.

Two things happened in the fall of 1969 to make a summer's worth of low-profile organizing pay off in October. One was the Labor Day recess, when most Congressmen went home and discovered a great deal of disgruntlement with the war. They often found anti-war activities being supported by surprisingly "straight" people. Congressmen react very quickly to broad-based constituent pressure, and endorsements came in rapidly during September.

Also, Congressmen react to an informal perception of national mood, which they get from the media. Washington is a funny town, and things often occur largely because the right people say they will. Averell Harriman began saying that he thought the Moratorium was a good thing, and so did Ramsey Clark. Bernard Nossiter wrote an article in *The Washington Post* in which he struck a favorable tone and anticipated widespread activity on the 15th. A few columnists responded, and soon the mood became right in Washington. With the luck of this favorable mood, we convinced enough media people that a lot of things really *were* going to happen on October 15. Once the media began doing Moratorium previews, Congressmen with sensitive noses for publicity began to nibble at the Moratorium in the interest of a good headline. Most people on the Hill want to be helpful on the day they can get big press coverage—but not otherwise, or the next day.

October 15 was far more successful than we had even hoped, as Moratorium activities took place in more than 500 towns across the country and on most of the nation's campuses. The events were well covered, the tone was good, and many new groups were brought in. There were a lot of professionals: 700 attorneys in Boston, 25,000 people at a Wall Street rally, businessmen in Chicago, government and social workers, advertising and publishing people. Walter Reuther and Roy Wilkins participated, and the Moratorium was endorsed by many of the establishment Democrats who had been so reluctant to break with Lyndon Johnson over the war. There was a great deal of euphoria within the ranks of local Moratorium groups, and we at the national office found that success spawned an atmosphere of hope that new constituencies could be won over and that the movement would snowball. Although October was far bigger than we anticipated in terms of national impact and therefore did not fit in well with our plan of escalating peace actions, the four coordinators were quite optimistic.

Within a month the bubble had burst. The President's speech of November 3 and the reputation of the Mobe (New Mobilization Committee to End the War in Vietnam) neutralized many of the new peace activists in the Congress. Many of them felt that they had done their bit for peace in October and that it was prudent to coast for a while. The New Mobe leaders—Ron Young, Stewart Meachem, Cora Weiss, Fred Halstead, Richard Fernandez, and others—did their best to establish a non-violent commitment through the press, short of excluding hard left groups from the platform; but many people in Congress and the press still chose to see them as simply a bunch of Trotskyites, socialists, draft-dodgers, and militants. They conjured up visions of the leaders of the Pentagon march of 1967 and the Chicago demonstrations of 1968 descending on Washington for November 15, 1969.

The mood in Washington before November 15 was very tense. The press dwelled on the threat of violence, the Administration stalled negotiations on demonstration permits, and the citizens of Washington were afraid to open their doors to peace marchers. Meanwhile, we tried unsuccessfully at the Moratorium to keep our activities on November 13 and 14 separate from the Mobe's large demonstration in Washington. But the Moratorium became a generic term for all anti-war activity, including the big march. We decided to support the Mobe activities, partly because we thought they clearly intended to have a nonviolent demonstration, and partly because the events were going to happen anyway and would reflect on the whole peace movement. We doubted the wisdom of centralized marches and demonstrations at that time, but we found it impossible on balance to publicly criticize or abandon the demonstration of November 15, thereby splitting the peace movement and isolating the demonstration's sponsorship farther to the left.

The weekend of November 15 came off well, even with the Weathermen in town. On Thursday their leaders came to the Moratorium requesting an "expression of fraternal solidarity" in the form of $20,000. In return, they offered to give us an expression of fraternal solidarity by making the case for non-violence at the Weathermen strategy sessions. We refused. The next night there was a great deal of window-breaking around Dupont Circle and an assault on the South Vietnamese embassy (reportedly led by a police agent known as Tommy the Traveler). The police responded with tear gas and billy clubs. The Saturday crowd of some 300,000 was peaceful—governed by its own mood of flower-calm protest. There were no confrontations with the police (in fact, there was scattered fraternization) until the demonstration at the

Justice Department against the Chicago conspiracy trial. Before 4:00 p.m. on Saturday there were no arrests—very unusual for a crowd that large.

But the tone was still wrong. The press focused on Saturday because it was going to be big and virtually ignored the impressive two-day March Against Death. Almost 50,000 people walked from Arlington Cemetery past the White House to the Capitol steps in a continuous, single-file procession. Each person carried a candle and a placard bearing the name of an American GI killed in Vietnam or of a dead Vietnamese or a destroyed village. The placards were dropped in coffins at the steps of the Capitol as the candles were blown out. But the press concentrated on the big demonstration, previewing it with speculation about the extent of violence and reviewing the day with crowd estimates and the usual line about the day's being generally peaceful with a few spicy violent actions by radicals.

The Saturday crowd was overwhelmingly young, partly because many young people had been angered by the President's first super-patriotic defense of the war in his November 3 speech. The Vice President made his barroom debut on November 13 with his first roundhouse at the media. The wedge was driven between the young moralists and the temperate pragmatists. The latter were partly neutralized by the November polemics from the White House, so they stayed away in even greater numbers than non-students usually stay away from demonstrations.

After November 15, Middle America saw the peace movement more than ever as a youth-based effort, with a sizable element of what seemed to them to be kooks, freaks, and lazy hippies. They saw it that way, even though it was largely untrue, and what they saw became operative for skittish Congressmen. Between then and the Cambodian invasion, virtually no one on the Hill did any peace work. Even committed doves were asking to be let off from speaking engagements on April 15. That is not only a bitter commentary on the state of the peace movement but also an indictment of the responsibility of traditional leaders on vital questions of peace and war. They were coming to us to be let off, and we were going to them pleading for support. We couldn't agree on a strategy, but it was generally assumed that we would provide the initiative and they the support. The world was upside down.

This is a third kind of vicious cycle within the peace movement: if you can't get straight, Middle American, Congressional support, the peace movement is seen largely as a youthful cabal, which makes it impossible to attract Congressional support. Only a fortuitous national mood with the proper temperate tone or strong Congressional leadership can overcome that problem.

If polarization and the peace movement's youth identity had removed Congressional support after November, the Moratorium was also afflicted with fatigue. November 15 was a hard act to follow. There was a kind of huge peace orgasm in Washington that Saturday, and everyone went home to sleep it off, convinced that the war would never end if that demonstration had no effect. For the previous several months, families had been strained and studies neglected to generate the enthusiasm and organization for two months' demonstrations. The people were simply tired and resigned to the nation's acceptance of Nixon and his Vietnamization program.

There was also a fairly strong backlash against October 15, which took place in many little towns and went largely unreported. There were many places where October rallies had been put together in rather bizarre fashion by people regarded locally as the oddball biology teacher, the left-wing minister, and the kooky lady. After November, patriotic solidarity rose to attack such people by firing teachers who wore black armbands, harassing participating students, and passing anti-demonstration ordinances. We spent a great deal of time trying to help the victims of this backlash.

We had trouble generating any enthusiasm out of the national office, and we really didn't have much to give. We discovered that our plan for a continuously building peace movement had succumbed to the cyclical rhythm of campus protest, the political season being fall and spring. December Moratorium activities were small in most places, and we abandoned the idea of escalating the Moratorium period each month. We fell back, regrouped, and made plans for a series of spring actions at income tax time focusing on the cost of the war.

During the period between November and April, the other coordinators and I found ourselves trying to cope with some of the Moratorium's failures, and recognizing new ones. For one thing, I became convinced that there was a serious lack of long-term commitment among many students. Time after time, students came to the national office arguing that the system had failed to respond to their efforts, but it almost always turned out that the students' efforts had consisted of little more than canvassing for a weekend in a 1968 primary, attending an October rally, and participating in some marches. They had not yet accepted the fact that ending the war would take a long time and a great deal of dirty work.

The Moratorium also had severe bureaucratic problems. The organizational structure followed from a kind of three-pronged anti-authoritarianism within the peace movement. There was a good deal of genuine intellectual anti-authoritarianism among those who had been active long enough to see an Administration composed of all the great humanitarian liberals in the country start a war, who had personally witnessed the Mississippi Freedom Democrats' challenge being sold out (by Hubert Humphrey) at the 1964 Convention or who had found the CIA in control of the National Student Association in 1967. Who wouldn't develop an anti-leadership bias? This source of anti-authoritarianism inspired a great deal of the enthusiasm for McCarthy in 1968.

There was a purist branch of anti-authoritarianism, which taught that organizational discipline was in fact essential to the cause—but only after one made absolutely sure that the leadership was selflessly concerned with the pure gospel and not playing petty reform politics. The problem was that the Moratorium *was* playing reform politics in the sense that we were seeking political alliances with anyone against the war. We didn't feel we were operating in the wheeler-dealer school of political self-advancement, but some of the activities of the Moratorium clearly resembled traditional political bargaining. I considered that part of being serious about ending the war.

Finally, there was the normal amount of scrambling for leadership posts in all the Moratorium offices. People always debunked and frequently deposed the leadership if they felt they could do a better job.

The leadership problem was inherent in any organization of people who were peers in age, especially since there was no one of stature to offer himself as a full-time organizer for peace. Unlike 1968, there was no candidate to rally around. At the Washington office, we felt that young people always respond better and work harder if they have a part in formulating their objectives. At the same time, we felt that organizational efficiency is wiped out unless you reach a kind of consensus that discipline is necessary for operation. Otherwise, it's really impossible to organize a worthwhile canvassing campaign, for example, where discipline is critical for getting people where they are supposed to be, at the right time, with the right opening lines, and with the information processed so that it will be useful.

The leadership question was most important in dealing with the left. I found it absolutely imperative that the Moratorium define itself away from the hard left in order to regain the constituencies we had reached briefly in October.

But White House polemics had made it futile for us to try to organize these groups because we were tied to what Middle America regarded as militants. Strategy aside, the labels pinned on the peace movement made it impossible to establish a credible commitment to non-violence, which was important to all four of us at the national office. It was incredible to me that President Nixon had managed to label us as the source of violence in the United States. Every month, he in effect takes $30 from every American taxpayer to ship across the Pacific Ocean along with 20,000 draftees. This is the installment payment on the 400 or so caskets and several thousand amputees and cripples that come back across the ocean each month. Every month tons of bombs are dropped on Vietnamese villages at the President's order, and yet he can find 10 sticks of dynamite on West 12th Street in New York and speak as though the apocalypse were upon us because the peaceniks are at it again.

One of the reasons the President can get away with such nonsense is that many of us in the peace movement failed to dissociate ourselves strongly enough from violence on the left. While I thought it morally necessary to separate ourselves from those who advocate violence, I found it very difficult to do. After the Dupont Circle violence of last November 14, I said for publication that I thought those people should be arrested and processed for criminal charges. I also said that it is outrageous to gas, beat, and press inflated multiple charges against window-breakers and petty vandals, but that part never got reported. The press stories came out to the effect that I thought the people had gotten what they deserved. Similarly, I've said on numerous occasions that the country will fall apart of internal hemorrhage if the war is not ended, and it always comes out: "If the President doesn't end the war, we're going to tear the country apart."

Splitting from the left was one of those tough, grisly decisions forced upon the peace movement by the politics of war. Although I couldn't buy the purist argument that only the hard left deserved credit for peace activities (an argument used to exclude people like Senators Harris and Mondale), it was personally difficult to break with friends in the Mobe and politically dangerous to split the peace movement when the chances of attracting real Congressional leadership seemed so low. And it also involved clear responsibilities for what happened afterwards, because I believe that if the hard left is really isolated, it will be repressed. If the moderate peace leadership stands up and says, "We intend to create a peace organization with a strong commitment to non-violence," the political impact of that will be to say "and that makes us a lot different from those kooks." No matter how hard you emphasize to the press that you will fight for the civil liberties of the people on your left, they will divide the groups into good guys and bad guys, leaving the latter fair game for Mitchell and Kleindienst.

It almost takes the press clout of the President to draw fine distinctions in the media. At the Moratorium, we could draw the coverage, but we could never really control how it came out. This made it impossible to move to the right without baiting the left with Agnew rhetoric, which we refused to do.

The responsibility question weighed heavily in our strategy sessions this past winter, even though we may have vastly overestimated the Moratorium's effectiveness as a buffer between the government and the Mobe. We have argued for some time that

we on the left have to take responsibility for the consequences of what we say. When William Kuntsler says we've got to overthrow the government by force, but not by violence, to a 15-year-old kid that means break windows and throw bricks. You can't retreat into academic distinctions between moral force and physical violence after speaking on a political platform.

All these problems—Nixonian polemics, Vietnamization, fatigue, the question of the left, bureaucracy—plagued the Moratorium during the peace movement's "low profile" period from November until Cambodia. At the Washington office, we tried to resist the opening to the left which tempts all groups on the left that don't hold power. In order not to become another SNCC or SDS, the national coordinators had to repeatedly say no to the left options within the Moratorium. David Mixner was the toughest on this question, and I was second house rightist. Local Moratorium offices commonly fought the same battles that were going on in the Washington office.

Two conclusions became obvious in April. First, the national Moratorium office was more of a burden on the local groups than a help. We were in danger of becoming peace bureaucrats, full of jurisdictional squabbles and petty fights, with no sense of joy or purpose in what we were doing. So we decided to do what all stale organizations should do—disband, and let the good local groups survive on their own and the bad ones fade away.

The second conclusion was more fundamental: that our strategy was right but that our base was wrong. I am convinced that it is not possible to build a successful peace movement simply on a student base. Not enough students have the stature, capacity, or inclination to run a tightly-disciplined peace movement, which would be required to make them effective and keep them moving toward Middle America. Even if such an organization were possible, students alone would be unable to attract a majority of the American people to any politically effective peace position. Students can have an impact, since most Americans still don't want to hate their own children. But you must have strong leadership off the campuses to set the tone and direction of the anti-war effort and to give it hope.

This second conclusion made it easier to go to Capitol Hill in April and tell the hesitant doves that if they cared about peace in Vietnam *they* could provide the leadership. Through the entire history of peace politics, Congressional doves had very seldom spent a full day's effort on the war. They gave speeches on occasion. But within the Senate there was no organization, no regular meetings, no commitment to get together and sublimate their egos to produce a piece of legislation, no serious intention to debate the war on the floor of the Congress, no effort to raise the money to use television in response to the President, none of that. This was particularly galling right after the Carswell vote in April, when these same Senators had come from nowhere to beat him with hard work and internal organization. They had also undercut the moderate peace leadership and the new constituencies of October. In October, we had one resource to use in dealing with the left—we could deny them speakers and publicity if they didn't move toward the center. But in April we had no cards: a rally of 80,000 people was held in Boston with no control over hard-left factions because our support on the Hill had evaporated.

Our message had paltry effect compared with the invasion of Cambodia, of course. But even Cambodia failed to provoke the kind of leadership necessary to move the Congress and take the war to the country. The initial spurt of enthusiasm in the Congress, especially in the Senate, has largely ebbed. Regular meetings of anti-war Senators have ceased, and there is little evidence of the cooperation or initiative necessary to effect a strategy to end the war.

The outline of a successful anti-war strategy, it seems to me, is clear: the appeal must be made in such a way that Middle Americans will not ignore the substance of the argument because of an offensive style. Support for such an appeal exists. After all, immediate withdrawal is not a radical proposal in this country today, and careful analysis of the polls shows that all political stances on the war must be couched in terms of reaching the quickest possible termination. This indicates that a quick political settlement or immediate withdrawal can become a majority position if the message is presented in a strong but palatable fashion.

While peace activists should not underestimate potential support for an anti-war position, we should also avoid underestimating President Nixon's commitment to some sort of victory in Southeast Asia. I believe that the President's "new" image as a cool, neutral majority-maker, a consummate politician who responds and shapes rather than leads, considerably understates his ego commitment to the war. We are dealing with a man who has a full-time awareness of himself as history—the first President ever to name his own doctrine, the Nixon Doctrine, which I suspect was motivated as much by the simple desire to place his name on the books as to enunciate whatever its meaning is. We are dealing with a man who felt called upon by the world to issue a "State of the World" message, to dwell upon its historic primacy, and to quote himself 27 times in the document while citing all other human beings in history only three times (all three of these quotations were of Secretary of State Rogers agreeing with the President). The President has read the history books and knows that the great Presidents of the United States won wars. He even knows what room of the White House was used to announce the great wartime decisions.

These ego commitments are very harsh terms in which to describe a crucial motive for the Administration's continuation of the war, but I find no others which makes as much sense. There is no more plausible way to explain why the President did not end the war right after he came into office, with little or no political risk. Nor can I otherwise explain his total aversion to Congressional moves toward sharing the political responsibility for ending the war.

The President's personal commitment to the war helps explain why he goes for the political groin to justify his actions. He uses patriotism and the flag, which are deep-seated loyalties for most Americans, to stimulate support for a war which clearly calls forth no such loyalties. He uses the media presence of the Presidency to characterize the opposition as near traitors. I think the President has won a large part of the Vietnam debate in the past merely by naming the teams. When it's the Silent Majority versus the Loud-Mouthed Militants, the Silent Majority wins every time. He and the Vice President have also managed to sell the incredible notion that the press of the United States is leftwing. People who believe that have obviously never attended a convention of the American Society of Newspaper Editors, where the sentiment is overwhelmingly conservative, verging on outright jingoism.

Since the country drifts toward impatience for withdrawal as the war drags on, the President will have to continue seeking the jugular if he clings to the victory wish. This is one of the greatest dangers to the peace movement; for when the dialogue over the war is degraded past a certain point, it ends. (Liberals should remember the converse: that when the dialogue is elevated to a certain level of generality, involving, for example, petty squabbles over doctrinal minutiae, then the talk goes on forever without action.) People can no longer talk to each other, and confrontations based on tribal sign language become the norm. In all political likelihood, most of Middle America would line up with the President in any such jungle warfare.

The atmosphere of debate over Vietnam is already so debased that it will be very difficult to take the high road—to offer the American people the kind of positive tone and hope which would stand out by contrast with the President's increasingly defensive and visceral statements. It will be impossible to do so without very strong leadership. I suppose that is the heart of my feelings about the peace movement—that the strategy can be devised, that the constituency is there, but that these assets are useless without strong, non-student leadership. The money will follow evidence of leadership. If my analysis of President Nixon's objective in Vietnam is on the right track, the task will be very difficult, but all the more imperative.

The leadership must have the media presence to counter the President's enormous TV influence. Someone must respond to his smears on the patriotism of doves. A figure like Harold Hughes would have great impact if he said in effect: "Look here, Mr. President, we're not talking about campus bums. We're talking about whether Vietnam is worth continued killings and maimings. I fought through Europe in World War II and consider myself as American as anyone, but that was 25 years ago. And the fact is that Vietnam stands between us and everything America hopes to become." The leadership must be willing to talk about Vietnam in terms that will appeal to Middle America—to rename the teams so that we start on ground zero with the hawks, rather than at an emotional disadvantage.

Part of the new message must be the destruction of the silent majority myth. The only clear lesson of the polls is that most Americans want an end to the war. If the President were to use television to justify withdrawal on the grounds that we had done all we could or that the South Vietnamese government was corrupt and unworthy of support. The silent majority is largely produced by the American propensity to defer to the President. In March of 1968, for example, the Gallup poll showed 40 per cent for and 51 per cent against stopping the bombing of North Vietnam. After President Johnson stopped the bombing, the polls showed 64 per cent for and 26 per cent against his decision. The silent majority appears quite malleable.

Not only must the silent majority argument be exposed as a sham, but the popular characterization of doves as militant, long-haired kids and the silent majority as middle-aged and middle-class must be dispelled. Young people as a group are *not* more dovish than old people, nor do overeducated eggheads tend to be more dovish than "the folks." In fact, the polls show that college-educated people in their twenties are consistently more hawkish than older non-college graduates, by a significant margin of about 20 per cent.

In addition to establishing a tone acceptable to Middle America, renaming the teams, and destroying Presidential myths, the peace leadership should use the media to make becoming a dove more psychologically attractive to Middle Americans. Prior emphasis on the moral aspects of the war has meant that the first psychological step toward an anti-war position has of necessity been the admission that the United States is somehow evil. Since many people are unable to make that jump, an admission of American guilt should not be asked of all potential supporters. To the extent that we in the peace movement have played down the pragmatic arguments for peace, we have weakened our case and lessened our chances

of ending the war. It is in no way inconsistent with our moral opposition to the war to lay much greater stress than most of us have as yet on the great practical benefits of peace.

This new peace leadership should be composed of Senators, Congressmen, governors, mayors, businessmen—all the straight people who are willing to make a firm and unequivocal commitment against the war. The spokesmen should be those most visible and most attractive to Middle America, those who can speak intelligently about the war with strength rather than condescension or aloofness.

The five co-sponsors of the Amendment to End the War already has a list of some 75,000 people who responded to the Senators' television special after Cambodia, which could be the beginning of a peace constituency. What is needed is commitment from a large number of people willing to cast a "bullet" vote for peace. This commitment may be less organized than a party or formal corporate structure.

The new peace leadership must make it clear that it is in for the duration—until the end of American involvement in Indochina. The cyclical activity of the anti-war movement has had a double disadvantage in the past: during periods of upswing, the peace movement has overestimated its effect and thus paved the way for subsequent acute frustration and resignation; during the downswing, the government has underestimated latent anti-war sentiment, and this has possibly contributed to adventurism.

If the focus of the peace movement could be shifted to the new and long-awaited leadership, young people would be far more effective politically. I don't think we have to hide who we are, or even what we say. We should merely recognize the fact that the political balance on the war is held by people with different life styles. Students could be a left, moral pressure on the coat-and-tie leadership. Students could make it clear to Richard Nixon that *they* will write his history and that all wars are not heroic. They could make it clear that there are *costs* held against those who wage this war. Those who wage the war should be constantly reminded that they are responsible for a moral horror—like the British Viceroy in colonial India. Every time the Viceroy showed his face in public he saw a silent Indian holding a sign which read "Assassin." Lyndon Johnson and Richard Nixon should be subject to the same treatment. We should make them aware that there are large numbers of people in this country who hold them responsible for criminal activities and who believe that those who wage the war cannot cast off the responsibility merely by leaving office.

There is no assurance at present that a new peace leadership is forthcoming, although recently several prospective leaders have been leaning toward conscience and away from conservative careerism. If these people were to emerge, I believe that it is quite possible to build a peace constituency and create a national atmosphere in which it would not be possible to wage the war. This would be partly a matter of national mood, which is highly volatile and heavily influenced by unexpected events.

A renewed peace movement would also exercise political clout, apart from its impact on the nation's war temperature. The National Rifle Association is an unpleasant model; but if a tiny fraction of the population can stop gun control with organization and the bullet vote, then the peace movement can stop the war. The new constituency would have obvious potential in 1972.

All these ruminations have been predicated on certain traditional assumptions: that people's political opinions should count, that democracy can be made to work, that there is enough good will left in the country to make it work, and that given a choice between rational alternatives, Americans will choose the most humane course. At the same time, the American people have shown that they will not respond favorably to violence committed in the name of ending the war, or to a version of democracy that romanticizes about participation of the poor and the black but ignores the middle, or to peace advocates who think demonstrations are a substitute for the sustained work of peaceful persuasion.

But the "system" should not be applauded even if the war were to end tomorrow. For five years, it has provided no real way for people to express their views of a war which was presented to them as a test of manhood. The system provided no public debate over whether we should enter the war, but instead permitted or leaders to involve us by stealth. This critical failure gave inertia to the propagation of the Vietnam war and sneaked the flag onto the battlefield—leaving the peace movement at an enormous political disadvantage. The system has provided poor information to voters and little active leadership for a position of obvious principle.

If the war is now ended by political action, as I believe it can be, some will undoubtedly argue that the system has vindicated itself. That argument, however, is self-deceiving; for in many crucial respects our system has already failed and requires radical reconstruction.

But that is premature retrospection. If the war can be ended only with such self-delusion, we should end the war now and fight the delusions later.

THE NEXT STEP

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into the CONGRESSIONAL RECORD an editorial appearing in the Washington, D.C., Star of September 4, 1970, entitled "The Next Step."

That excellent editorial points out that the time has come for a national health insurance program.

The time is clearly here and indeed is past, for creation of a national program of contributory health insurance to assure that the highest quality medical care possible be available to all citizens.

The article follows:

THE NEXT STEP

The national health insurance bill, presented by Senator Kennedy on behalf of a bipartisan team of 14 senators, doesn't stand a chance of passage in this session of Congress. But cradle-to-the-grave health insurance is coming, possibly in the first half of this decade.

It is coming not because, to use the well-worn phrase, it is an idea whose time has come. National health insurance will be adopted because it is a necessity that can no longer be avoided.

Few Americans need to be convinced that medical care has priced itself out of the market. Almost no one, with a few gilded exceptions, can afford a serious illness. And the cost of private health insurance programs has increased to the point where they have become a necessity that few families can afford.

Americans know they are paying more. But less generally understood is the fact that they are getting considerably less for their money than most citizens of technologically advanced nations. The United States ranks No. 1 in the total and per capita amount spent on health and medical care. But in return for the yearly investment of $63 billion, or $294 per person, America ranks 13th in infant survival, 13th in maternal survival, and 18th in male life expectancy. By contrast, Sweden, which ranks first in the field of national health, spends $45 a year less per person than does the United States.

Not all of the medical problems of this country will be solved by a national health insurance program. Too hasty a plunge could worsen the problem by increasing the load on the already overburdened system.

The move must be made carefully. But it must be made. In the long deliberations that lie ahead, the debate should concern itself not with whether a program of national health insurance should be undertaken, but how best to make it work. Invaluable lessons can be learned from the countries that have preceded us into the field, and the lawmakers and the medical profession would be well advised to spend their time sifting the best from the experience of the pioneers.

The time for opposition is past.

FREEDOM IS INDIVISIBLE

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. PUCINSKI. Mr. Speaker, August 21 marked the second anniversary of a day of infamy, a day of Soviet shame when Russian tanks came rumbling into Czechoslovakia to "liberate" them from their new-found freedoms.

Czechoslovakia was the most democratic country in Eastern Europe when it was briefly independent after World War II. This independence was shortlived. The Czechs, Slovaks, and Subcarpatho-Ruthenians had been subjugated by the Nazis and then the Communists, two sides of the same coin.

Under Premier Dubeck, the people of Czechoslovakia began to enjoy the new liberalization with human dignity. But alas, the Russians came up with the Brezhnev doctrine and invaded Czechoslovakia with an army to suppress the invasion of ideas and ideals. By this action, the Russians demonstrated once again that they respected no laws nor that of common human decency.

The Czechoslovakian people may be temporarily muted, but they serve to remind us that the quest for freedom and liberty will continue until they are masters of their own fate.

I should like to place in the RECORD today a statement issued by the Czechoslovak National Council of America to "commemorate" the second anniversary of the invasion of Czechoslovakia.

Mr. Speaker, the statement follows:

FREEDOM IS INDIVISIBLE

On this sad occasion of the second anniversary of the brutal Soviet-led invasion and occupation of peaceful and freedom-loving Czechoslovakia, we American citizens of Czech, Slovak and Subcarpatho-Ruthenian descent, again remind the entire world of this Soviet violation of key principles of international law incorporated into the Charter of the United Nations:

The brutal Soviet aggression and occupation:

(1) violated the sovereignty of a member state of the United Nations (Article 2, Section 1);

(2) was carried out in violation of Article 2, Section 4, which prohibits the use of military force in the relations between individual members of the United Nations;

(3) violated the principle of self-determination of peoples (Article 1, Section 2);

(4) was in conflict with Article 2, Section 7, which prohibits outside intervention in matters essentially within the domestic jurisdiction of any state;

(5) was in conflict with a number of resolutions of the General Assembly of the United Nations, particularly, with Resolution 2131 (XXI) adopted at the meeting of December 21, 1965, upon the Soviet Union's own motion, prohibiting any intervention in the domestic affairs of any state and guaranteeing its independence and sovereignty.

The continued Soviet occupation of Czechoslovakia is another crime against the right of a small country to determine its own destiny and aspirations. The invasion was an intervention by the forces of reactionary communism to prevent the Czechs and Slovaks from establishing their own social order that did not endanger anyone and sought to contribute to the building of bridges across the discords of a divided world and to lend aid to a better understanding and cooperation among all nations on the basis of true progress and humanity.

The people of Czechoslovakia have not resigned themselves to these aggressive plans of Moscow. The day of August 21st is being commemorated in Czechoslovakia as a *Day of Soviet Shame* in a mighty and disciplined resistance against Soviet pressure. We are joining our friends in Czechoslovakia in asking the entire civilized world to support the people of Czechoslovakia in their effort to achieve the sole aim of their resistance:

"The withdrawal of Soviet troops from Czechoslovakia."

August 21, 1970

Czechoslovak National Council of America, Chicago, Illinois.

BIGGEST CITY

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. DERWINSKI. Mr. Speaker, tomorrow our House Subcommittee on Census and Statistics begins hearings on the accuracy of the 1970 census. One of the witnesses will be the mayor of New York, a city which boasts of the size of its population. Radio station WBBM—78—Chicago, in the following very objective editorial on Saturday, September 5, discusses the attitude of New York and its census statistics:

Subject: Biggest City.

Broadcast: September 5, 1970.

The preliminary census reports are in, accompanied by the anguished howls of mayors who believe their communities were slighted in the tally. Our own mayor feels that way, and the issue is important, in that various funds are allocated to the cities on the basis of population.

Most people look at the census reports merely to see who's the biggest or smallest, and who is growing the fastest. Chicago, in case anybody had any doubt, is still the nation's second largest city, and after a recent visit to New York City, we certainly have no desire to be first. The price is too high. First of all, there's people, and New York is wall to wall people. Where there's not people, there's garbage. The subway now seems to have a built in crash schedule, and the dominant color is grime.

Fun city has become surly city, as the scowl seems to be the prevailing expression in New York. This is not to deny that Chicago has its faults, but at least we can examine our faults with some degree of privacy, and discuss them without choking on soot.

Many pompous New Yorkers will still look with disdain upon anything west of the Hudson, and gloat about their size. That is now growing increasingly difficult, for the New Yorkers are beginning to realize the high price of being first in the census.

CONGRESSIONAL REPORT SENT TO NINTH DISTRICT RESIDENTS, AUGUST 17, 1970

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. HAMILTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report:

CONGRESSIONAL REPORT

The murder of former Richmond Police Chief Dan A. Mitrione in Uruguay was a shocking demonstration of politics by terror. While this senseless crime apparently was carried out in the name of advancing political change, it revealed the Uruguayan militants as a criminal force, not a political force.

The slaying of Mr. Mitrione, who was in the Uruguayan capital as an adviser to the police department, is one of the tragic series of kidnapping incidents which have occurred in South America in recent years. U.S. Ambassador John Gordon Mein was killed in August, 1968, in an abortive kidnapping attempt in Guatemala City. Last March, West German Ambassador Count Karl Van Spretti was slain, also in Guatemala.

U.S. Ambassador to Brazil C. Burke Elbrick, and West Germany's Ambassador to Brazil Ehrenfried von Hollenben, also were kidnapped and released. A number of embassy personnel from the United States, Japan, Paraguay and Uruguay also have been victimized by other kidnapping attempts.

These incidents, staged to bring about domestic changes, create serious international problems. The militants have been demanding the release of fellow terrorists, jailed by the government in power, in return for their victims. In cases where the demands have been met, the terrorists have been given asylum in other Latin American countries.

The host government is faced with a difficult dilemma. It can (1) comply with the demands of the terrorists, showing its own weakness, and giving weight to the terrorists' claim of being an active political force, or (2) refuse to give in, allow the terrorists to kill the victims, and risk the strong disfavor of the countries whose diplomats are victimized.

In dealing with this technique of the terrorists, the United States faces the problem of how to provide protection for its diplomats without shutting them off from contacts with the local people.

Diplomacy, by its very nature, requires freedom of movement and mingling with a wide variety of people in the host country. The diplomat's efficiency is restricted when his movements are restricted. As one diplomat in Washington said recently, "You can't have diplomacy in a tank."

The United States provides some measure of security for its diplomatic personnel by maintaining a 1,000-member Marine guard force for about 100 overseas posts. But with more than 6,000 U.S. foreign service officers overseas, complete protection is virtually impossible.

The State Department has requested an additional $1.9 million for fiscal year 1971 to strengthen overseas protective security. Foreign service officers have been advised to vary their daily routines, to avoid late hours, and to travel in pairs whenever possible. These are precautions, however, and in no way a solution to the growing problem.

The United States favors an international convention to combat political terrorism. Since such incidents have been concentrated in Latin America, our efforts have been focused on the Organization of American States (OAS). A resolution, condemning terrorists tactics, was adopted at a special session of the OAS General Assembly in Washington last month, and the Inter-American Judicial Committee of the organization is to present its recommendations to the OAS Permanent Council in the near future.

While the kidnapping issue is a major concern of the OAS, the Organization has yet to present a unified Latin American front on the question. It has been suggested that the right of asylum be curtailed for political prisoners ransomed for the lives of diplomats. The issue also is seen as an item for discussion by the United Nations.

At present, the United States' approach to these problems is marked by flexibility, a case by case approach, rejecting both a no tribute under any circumstance policy as well as threats to the host government to solve the problem forthwith or suffer a severing of diplomatic relations.

For the U.S. the solution to this difficult problem of terrorist kidnapping lies in a combination of efforts in international organizations and with host countries, urging them to take every possible step to protect diplomats, and, at the same time, to increase the security for them.

LATIN AMERICA—BETWEEN TWO DECADES

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. REUSS. Mr. Speaker, Felipe Herrera, president of the Inter-American Development Bank, discussed the problems and progress of Latin America in the 1960's and the outlook for the 1970's in a September 3 meeting of the Milwaukee World Trade Club in Milwaukee, Wis.

Mr. Herrera's address, "Latin America—Between Two Decades," follows:

LATIN AMERICA—BETWEEN TWO DECADES

Your invitation to come to Milwaukee to address you is particularly welcome to me, since it has given me for the first time an opportunity to visit a city which I find to be among the most interesting and dynamic in this country. Milwaukee is of the heartland of America. And for us who come from abroad and whose principal acquaintanceship with the United States is with the Eastern Seaboard or with the West Coast it is always refreshing to visit this great heartland. One tends to have a different outlook and to view the world in a different perspective in this heartland.

Although this is my first visit here, I am not totally unfamiliar with Wisconsin and Milwaukee, since one of your Congressmen, my good friend Henry Reuss, the Chairman of the International Finance Subcommittee

of the House Banking and Currency Committee keeps the activities of the Bank under scrutiny, particularly when additional resources for the institution are being sought, and another of your Congressmen, Clement Zablocki, is the ranking member of the House Foreign Affairs Committee, and thus is intimately concerned with the problems which affect Latin America and our Bank. Over the years we at the Bank have learned to know and value these members of Congress and they in turn have constantly kept us informed on the wishes of their constituencies—in other words with your needs.

On the trade side, of course Latin America and our borrowers are quite familiar with the extraordinary number of products manufactured in this city and state—Allis Chalmers, A. O. Smith, J. I. Case, Bucyrus-Erie, Harnischfeger, Koehring, Briggs and Stratton to name but a few, are familiar names in our countries. These and other Wisconsin names frequently appear in letters of credit guaranteed by the Inter-American Bank for purchases made by our borrowers on Bank-financed projects. In addition we maintain close relationships with some of your principal banking institutions, especially the First Wisconsin National Bank.

The subject I have chosen today, "Latin America Between Two Decades," was prompted by the deliberations of the 11th Annual Meeting of the Board of Governors of the Inter-American Bank which took place in April of this year at Punta del Este, Uruguay. At that Meeting we had the opportunity of reviewing with leading government officials of the Hemisphere and with business leaders and experts in Latin America the progress made by our countries during the Decade of the 60s, the main problems affecting Latin America's economic and social development at present and the prospects which may be in store for our region during the decade ahead.

It is especially fitting that these remarks should be addressed to a Mid-Western audience because Latin America has always felt the need for a wider exposure not only of its problems but also of its progress. As the region reaches with ever increasing vigor an accelerated rate of development and growth, it will inevitably acquire a greater stake in economic stability and thereby reach toward a greater role in world affairs.

I. OBSERVATIONS ON LATIN AMERICA'S PROGRESS AND PROBLEMS IN THE 1960S

Significant progress has been made in many of our countries during the past ten years. In that period, our region achieved a rate of growth of its aggregate gross domestic product of about 5 per cent annually, a rate that was exceeded in 1968 and 1969 when the region's domestic product grew by about 5.7 per cent annually. Especially significant in recent years has been the economic recovery of Argentina and Brazil, whose economies had stagnated in the early years of the decade. Both attained high growth rates in 1968 and 1969. In fact, Brazil's preliminary estimates for 1969 indicate an impressive 9 per cent growth performance and Argentina's was 7 per cent. It is also significant that Mexico's gross domestic product has been growing at a rate of between 6.5 and 7 per cent throughout the decade. Thus, the three largest countries in the region, which account for nearly two-thirds of the region's population and two-thirds of the gross domestic product, were rapidly expanding in the latter part of the 1960s. Some of the smaller Latin American countries also experienced high growth rates. The Central American countries all exceeded the regional average growth level of the 1960s, as did Bolivia and Trinidad and Tobago. It should be remembered that the region's growth rate during the 1960s exceeds the rate attained by most industrialized countries at a similar stage in their own development and that it equals the rate postulated by the United Nations as the goal for developing countries during the first development decade. In reference to domestic growth, I should like to stress the important role played during this period by the industrial, electric power and construction sectors. Manufacturing expanded by 5.4 per cent annually between 1961 and 1968, electric power expanded by 8.7 per cent, and construction by 5.7 per cent. The industrial progress achieved by the largest countries—Argentina, Brazil and Mexico—particularly in the past two years, was especially significant.

Even agriculture, which experienced a comparatively slow expansion of 3 per cent annually during the decade, reveals some bright spots. Food production increased by 4 per cent, expanding at a faster rate than did total agricultural production, and production in several countries exceeded these rates. Mexico, the Central American countries and Venezuela stand out in this respect. Data on fertilizer usage and crop yields of the UN Food and Agricultural Organization (FAO) indicate that substantial progress is being made in modernizing agricultural techniques. The so-called "green revolution"—the development in Mexico of the new high-yield varieties of wheat and corn—promises further substantial progress in increasing yield. Of considerable importance in these achievements has been a gradual transformation in the overall institutional setting, including improved access of farmers to adequate credit and to technical assistance, and, in several countries, structural changes in the farm sector. At the same time, improved agricultural policies have played a major role.

Success has also been noted in reducing balance of payments problems in many of our countries. Much of this can be attributed to some relatively favorable exports trends during the past years, supported by the worldwide trade expansion during that period. But national policies have also been influential in this regard. For example, there is no doubt that improved exchange rate policies and export promotion efforts have aided in this achievement. This has been particularly relevant in Colombia, Mexico, Argentina and Brazil. An example of the region's effort in this respect was the creation of the Inter-American Center for Export Promotion, designed to bring about a coordinated effort to regain Latin America's traditional share of world trade. These policies have permitted the region to relax import restriction that acted as a brake on development and moderately to increase foreign exchange reserves.

Significant achievements have been made in many of our countries in controlling inflation. In large measure this success is attributable to the strengthening of public sector finances. Tax collection has exceeded the rate of growth of the region's domestic product, central government deficits have been reduced and governments have been able to finance a growing share of public investments with resources collected through the tax system. This improvement has resulted from efforts made by our governments to improve tax structures, to increase the efficiency of the collection process, as well as through increasing the productivity of the expenditures made.

Despite the many setbacks, and despite the distrust and doubts with which many in the affected sectors have viewed them, the region has experienced a decade of economic integration efforts. Actually, the decade of the 1960s could be referred to as the "Decade of Latin American Integration." Many problems involved with integrating countries at different levels of development have been attacked and institutions for which increasingly specific goals have been agreed upon at the highest level of our governments were created and strengthened. The decade has thus not only witnessed the strengthening of the Central American Common Market and the Latin American Free Trade Association but also the creation of new sub-regional groupings such as the Andean Group and the Caribbean Free Trade Association. Because our Bank has made an early and firm commitment to foster economic integration in Latin America, we have frequently been called the Bank for Integration.

An indication of progress achieved in integration in Latin America can be obtained from the fact that intraregional exports have grown at a faster pace than total exports during the 1960s. For the region as a whole, intraregional exports increased by 12.2 percent annually between 1961 and 1968 while total exports increased by 5.3 per cent.

Considerable advances have also been made in many of our countries in coping with social problems. Latin America in the past decade considerably increased and improved its educational services. The increase in enrollment at all levels of education during the decade is estimated at 6.6 per cent annually, more than double the population growth of the region. At elementary levels, the enrollment increased from about 26 million children in 1960 to some 45 million in 1970. Even higher rates of increase were recorded at the secondary and higher education levels. These strides are of course a direct result of the higher proportions of budgetary resources which Latin America is devoting to educational investments: fully 18 of the countries of Latin America assign more than 20 per cent of their budgets to education, and nine of those surpass the 25 per cent mark.

Public Health and sanitation improvements during the decade can be credited with the substantial reduction in mortality rates, the improvement of life expectancy and the virtual elimination of malaria. Public housing which, prior to 1961, was assigned a low priority in many of our Latin American member countries, has begun to be developed, providing several of our expanding urban areas with increasing housing facilities. Innovations in self-help housing, in savings institutions and cooperatives for providing mortgages to low-income citizens are some of the many weapons developed. Here again, the Inter-American Bank has had many occasions to cooperate in these efforts, and our interest and participation in the task of helping urban development has been evidenced through the allocation of a considerable volume of our resources to this extremely important sector.

But, perhaps even more important than the economic and social achievements of the 1960s is the progress made in changing the basic sociological and cultural attitudes that are vital for economic development. Important in this regard is the increasing motivation associated with a desire for a higher standard of living, the greater willingness to face and adapt to changes in the way of life and social organization that an industrial society requires, and the establishment of institutions whose existence and efficiency are essential to the promotion and achievement of development goals.

To sum up: We believe that the lessons learned and the experiences gained have made made us far better equipped to face the problems of the Decade of the 70s than we were ten years ago in facing the problems of the 60s.

II. SOME PROSPECTS FOR THE REGION IN THE 1970S

In spite of the many successes attained in the past decade, there are still many problems facing our nations. Let me begin by expressing my conviction that the possibility for sustained growth in the developing countries in general, including Latin America, is limited if we do not, within a reasonable period of time, lay the bases for more equitable and more rational trade relations between the industrialized countries and the

nations presently basically exporting food and raw materials. We need not repeat evaluations and solutions proposed in terms of the so-called "trade gap." These have been fully covered by the intensive discussions and deliberations of the United Nations Conference on Trade and Development (UNCTAD), at its Geneva and New Delhi meetings in 1964 and 1968. As has been set forth, Latin America can point to a great many constructive experiences at both the national and regional levels aimed at overcoming the limitations of its underdevelopment. Yet, it continues to be seriously affected by external constraints which have gravely stifled the advances made in its economic, social and political growth.

Protectionist policies of the developed world that place obstacles to our exports of foodstuffs, raw materials and manufactured goods are examples. Short-run policies of industrialized countries, to reduce their balance-of-payments deficit by restrictions on foreign investment, drastically affect our economies. Problems of export instability, of non-tariff barriers to trade, and of declining terms of trade, will continue to hinder our development until some solutions are agreed upon between the industrial and the developing nations. One such policy that has been widely discussed in recent months, is the scheme to give "tariff preferences" to the manufacturers of developing countries. We heartily endorse this measure as a positive contribution toward correcting the vicious circle of external limitations in which many of our countries are trapped.

But we also feel that our countries can and should do more to aid their export performance. The need to reduce costs by appropriate economic policies and by attaining economies of scale through integration must rank in the forefront of the problems faced by Latin America's exports of manufactures. The acid test of our countries' dedication to development will come in the next 15 years, at the end of which they have pledged themselves to form a "Latin American Common Market." We at the Bank feel that our contribution to this goal will be enhanced by two instruments, beyond our present activities: the first to deal specifically with a more direct support of the industrial sector through the creation of an institution designed to facilitate industrial investment; the second will be a substantial expansion of a program initiated earlier to finance Latin American exports of capital goods. Internally Latin America still has many problems. Most of our countries are faced with a population growth of nearly 3 per cent which substantially diminishes the effect of our development efforts. We are tending toward rapid urbanization without being able to offer city dwellers the job opportunities and the community services needed. In this decade, Latin America must adopt an in-depth approach to the challenges of a changing society in which unstable urban conditions are aggravated by lack of adequate employment. This is the problem which Dr. Rául Prebisch, in his recent report to our Board of Governors' meeting has labeled "Urbanization without Industrialization," which calls for an enormous investment effort.

This brings up another problem confronting us: our urgent need to improve savings and investments levels. By comparison with other developing regions of the world, Latin America shows a high contribution of domestic savings to the formation of overall investment. Although this participation can be estimated at 93 per cent for the decade just ended, the ratio of savings to gross domestic product has not improved over the last decade. In the future, further improvements in tax and fiscal systems, in capital markets, and greater monetary and political stability to prevent the flight of domestic capital, will be needed. Presently, the ratio of investment to domestic product can be estimated at 17 per cent. This percentage is insufficient from the standpoint of development, demographic growth and new community demands. According to the "Prebisch Report" the region should undertake a dynamic increase in its rates of investment which during the next decade should amount to no less than 25 or 26 per cent of the Gross Domestic Product in order to achieve a postulated growth rate of 8 per cent a year: this is a figure needed to cope with unemployment and truly accelerate our development. The fact that the savings and investment ratio did not increase in the past decade while per capita income expanded at a rate of nearly 2 per cent annually demonstrates a further unrealized savings and investment potential. The increase in savings rates does not seem unattainable if we also remember that during the last decade public savings increased by nearly 50 per cent in real terms, largely through improved tax and fiscal mechanisms.

The acute differences in income levels among the various social groups in the region must also be viewed with concern. The poorest 40 per cent of our population still receives an average income equivalent to only one-tenth of the income received by the 20 per cent in the highest income group. In many of our countries, apparently satisfactory average figures on economic progress have limited significance, since development unfortunately has been concentrated within only certain groups and areas. This explains not only the inevitable social tensions, but is also a constraint on the dynamic capacity of our economies. Above all, the decade of the 1970s requires policies which stress not only better income distribution, but further social changes which will provide greater access for the large masses to the economic, political and cultural mainstream of the region as well. This is first, a social requirement; it is also an economic requirement for a dynamic and efficient industrialization process.

In spite of the challenges and obstacles just mentioned, we at the Inter-American Bank are decidedly optimistic about the economic and social development of Latin America in the present decade of the 70s. At current growth rates, Latin America, which in 1969 had a gross regional product of over $110 billion, can achieve an aggregate gross product of about $450 billion by the year 2000. Realistic calculations indicate that if we could gradually increase our current growth rate of 5 per cent annually to just 6.5 per cent over the next 30 years, we could attain an average per capita income for the region as a whole, or more than $1,000. We should not forget that the current per capita income in Latin America is equivalent to that of Italy 20 years ago.

III. THE INTER-AMERICAN DEVELOPMENT BANK

A new factor in the past ten years has been the increasing role played by multilateral public financing. Our own organization has been an important channel for this new contribution having completed in 1970 its first decade of activities.

Currently, our Bank membership consists of 23 countries including ten countries in South America, the five Central American countries, Mexico, the United States, Panama, Haiti, the Dominican Republic and the three newest members of our group (Trinidad and Tobago, Barbados and Jamaica). During the ten years of our operations, with resources contributed by member and non-member countries, including the Latin American nations themselves, the Bank has been able to participate with loans totaling more than $3.5 billion in the financing of 580 projects undertaken at a total cost of $10 billion. This action has been oriented by national development and multinational investment priorities and by the need for mobilizing financial resources while our member countries were establishing and modernizing institutions and improving their capacity to absorb external funds.

Nearly one-fourth of our loans (24 per cent) were channelled directly to the agricultural sector. About 29 per cent were made for economic infrastructure projects, divided almost evenly between transportation and communication projects and those in the electric power field. Another 17 per cent of our loans were made to the industrial sector, channeled through development agencies in our countries, in the form of direct financing, and through financing of exports of capital goods.

Before our organization was founded, external capital for social and urbanization projects was practically unavailable. Twenty-seven per cent of our operations have been directed to this area, for the provision of water and sewage services, for housing and urban development and for advanced education.

Included in this breakdown are substantial funds for technical assistance to our member countries and to support preinvestment activities.

The Bank has endeavored to be the "Bank for Latin American Economic Integration." We believe, as indicated in my previous remarks, that economic integration is absolutely essential if our nations are to attain the levels of industrial efficiency necessary to sustain development and to be vigorous in the world markets. No less than $400 million of our loans have helped support the concept of Latin American integration.

All this activity has been possible only with the support given to us by member and non-member nations. In this respect, the decisions taken by the Board of Governors Meeting, in Punta del Este, earlier this year, recommending to the member countries a new increase in the Bank's capital resources have been very encouraging. The ordinary capital is to be increased by $2 billion, out of which $400 million is to be paid-in, and $1.6 billion is to be callable capital. The latter serves as a guarantee for the Bank's bond issues in world capital markets. The resources of the Fund for Special Operations, which allow the Bank to extend financing under more lenient terms, would be increased by $1.5 billion. When we began our operations in 1960, our total capitalization was $1 billion. At the end of our first decade, we had reached some $6 billion and when the resource increase just outlined materializes, our capitalization will amount to some $9.5 billion. It is expected that these new resources will make it possible for the Bank to reach in the near future a level of lending about 50 per cent higher than the approximately $630 million reached in 1969.

The United States has been the largest contributor to our capitalization. However, such non-member countries as Austria, Belgium, Canada, Finland, Germany, Israel, Italy, Japan, the Netherlands, Norway, South Africa, Spain, Sweden, Switzerland, the United Kingdom and the Vatican, have contributed a total amount of about $500 million through purchases of bonds issued by our organization, through direct loans, through trust funds and through other arrangements.

Ladies and Gentlemen: The aims of Latin America to occupy its legitimate place among the nations of the world will require an even larger devotion to development as both a means and an end. They will furthermore call for the consolidation of what Raúl Prebisch calls a "development discipline,"—that is, a dedication to constructive change which might at times appear difficult to understand but which is unavoidable, for its has been the experience of every nation which is now enjoying high standards of living and prosperity. If Latin America is to eventually form part of the industrialized world community, it will continue to require co-

operation and, above all, understanding from the rest of the world community. This task, that of promoting understanding, is especially fitting for an association of public figures such as those present here today, for you have devoted your lives precisely to the work of understanding through communication. I can think of few more difficult but also of few more rewarding endeavors.

LET US BOTH CLEAN OUR HOUSES

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. FINDLEY. Mr. Speaker, the House Foreign Operations and Government Information Subcommittee has been conducting a most useful investigation of U.S. public safety assistance to South Vietnam. The inquiry, which has been a totally bipartisan effort, has focused U.S. national attention on conditions in South Vietnamese prisons that need immediate remedial action.

If America is to go before the court of world public opinion and demand more humane treatment for American prisoners now held by the North Vietnamese, our own hands must be clean. For many years, the U.S. foreign aid program and the U.S. military have given money, advisory services, and materials to South Vietnam with the stated objective of improving prison conditions and introducing more enlightened penal concepts in the treatment of inmates, whether they be political prisoners or prisoners of war. Our programs of assistance in this regard have clearly not been entirely successful. The subcommittee, a unit of the House Committee on Government Operations, is now asking why.

On July 26, 1970, the Sacramento Bee addressed itself to this question in the following editorial which I believe should be brought to the attention of all Members of Congress:

LET US BOTH CLEAN OUR HOUSES

Over a period of years the American taxpayer has put up more than $110 million to improve South Vietnam's national police and penal system. So this government has every right to insist the prisons be managed humanely and efficiently rather than tolerating the beastial conditions congressional investigators found at Con Son.

Now there is reason to believe that other penal institutions where political opponents of the Saigon dictatorship are confined are as bad as Con Son which has been described as a Devil's Island.

A subcommittee headed by Rep. John E. Moss of the 3rd, Sacramento County, District heard testimony from Dr. Marjorie Nelson, a member of the American Friends Committee, about her experience as a physician at the province prison of Quang Nai.

She gave a shocking account of torture by electricity, the breaking of bones, severe beatings, of inmates being hanged by their legs upside down and of being forced to drink concoctions containing powdered lime.

What is especially reprehensive is that apparently United States officials had full knowledge of this brutality and yet did not move for reform.

When Dr. Nelson protested to American officials, she was told the South Vietnamese were in charge and the number of people tortured had been reduced—not eliminated—just reduced.

Thomas Harkin, a congressional investigator who photographed the infamous "tiger cages" holding political prisoners, said Leo Dorsey, an American working in Vietnam, attempted to interest high United States officials about Con Son but they were indifferent.

Rep. Moss is right in bringing this whole ugly mess to the nation's attention.

He refuses to be deterred by those who claim that South Vietnam cruelties are justified in retaliation for conditions which exist in North Vietnam.

"Let us both clean our houses," he said, "and right whatever injustices that exist. One wrong does not justify another."

"Perhaps a concerted effort on both sides will lead to other understandings and eventually the return of all prisoners, whether they be political or military."

May the day be speeded.

GREEN REVOLUTION

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. FRASER. Mr. Speaker, two recent reports concerning possible unfavorable aspects of the Green Revolution have come to my attention. I place them in the RECORD because I know many colleagues are deeply interested in the development process and they may have missed these articles.

Nation building is a complex process. The reports which follow emphasize that complexity. We, as a nation, must do our share in solving the development mystery. To do less than our share increases the chances for worldwide disaster.

[From the Washington Star, Aug. 27, 1970]

WASHINGTON CLOSEUP—"GREEN REVOLUTION" COURTS DISASTER

(By Judith Randal)

Those who view the "Green Revolution" as an effective response to the threat of the population explosion should look about them at an agricultural calamity now under way in the United States, where an occasional crop failure can be endured without great discomfort.

Should the same thing happen in India or Pakistan, the result could be a human disaster unparalleled in history, with millions dead in its wake.

A fungus called Helminthosoprium maydis is running riot through fields planted to a variety of hybrid corn especially bred for resistance to this blight. Much of this year's crop in the Midwest may be lost owing to a sudden mutation, or genetic shift, in the fungus, which is now able to attack plants which had previously been immune.

This unforeseeable but not entirely unexpected turn of events underscores a warning by agricultural consultant William C. Paddock in the current issue of BioScience, the journal of the American Institute of Biological Sciences. By putting too much reliance on gimmickry, Paddock says, underdeveloped countries—and the world as a whole—are courting disaster.

Since Paddock published a book entitled "Famine—1975!" three years ago, the danger of widespread starvation that seemed so clear and present then is generally regarded as having abated. Some optimists say that the Green Revolution now assures the human race enough for its burgeoning billions to eat.

Not so, says Paddock; the gains made in the past three years through increased crop yields are illusory, caused far more by good weather than good husbandry. The "miracle grains" whose widespread use characterizes the Green Revolution are of lower nutritional quality than ordinary varieties, he says, and their resistance to disease may—in time, probably will—turn out to be a sometime thing.

Paddock quotes the following ominous passage from a Rockefeller Foundation report last year:

"All across Southern Asia . . . there has been a rush toward one dominant family of wheats prized for its yielding ability. . . . All of this wheat carries the same kind of rust resistance, which means that if a new race of rust to which it would be especially susceptible were suddenly to appear, much of the wheat crop of that whole vast stretch of the world could be devastated overnight."

Paddock says this is "not theory without precedent." He cites the destruction in 1946 of 30 million acres of oats bred to resist one disease but helpless before another unknown only four years earlier. The present emergence of a new strain of corn blight is another case in point.

Along with others, Paddock believes the world has been sold a dangerous bill of goods by the Green Revolutionaries—the more so because performance of the new seeds requires heavy doses of agricultural chemicals that threaten the environment.

He quotes Paul Ehrlich, the environmentalist, as saying, "Those clowns who are talking of feeding a big population in the year 2000 from make-believe 'green revolutions' . . . should learn some elementary biology, meteorology, agricultural economics and anthropology."

Paddock and other thoughtful scientists believe the only long-range defense against the threat of famine is population control. If crop yields increase at an annual rate of 2.5 percent while population increases at 3 percent, the result is not a green revolution but a human catastrophe.

In any event, the upturn in the last three years was less the doing of man than of nature, Paddock says. He notes that 1965–66 was a drought period in southern Asia and points out that "a drought followed by rain will cause a spurt in production with or without new technology." Production of other crops also increased after 1966 without new high-yield strains, he adds.

"When crops are poor," says Paddock, "governments blame it on the weather. When crops are good, governments take the credit."

There has been drought in South Asia before, and there will be drought again, and regardless of how the blame is laid, the next dry spell will see millions more mouths to feed. If a new strain of disease should come along coincidentally, the result could be too horrible to contemplate.

Paddock cites 19th century Ireland, where a "Green Revolution" introduced the potato to the Old Sod. When the potato crop failed in the 1840s through blight, one-fourth of the population starved, one-fourth emigrated and the rest "were left on the land in abject poverty."

Multiplied 50 or 100 times, this is what lies ahead for Asia, in Paddock's view, without what he calls a "population control revolution."

[From Bioscience, Aug. 15, 1970]

HOW GREEN IS THE GREEN REVOLUTION?

(By William C. Paddock)

Adapted from address given at the symposium, "Man: His Environment, His Future," at North Carolina State University at Raleigh, 25 February 1970.

Three years ago, any agricultural specialist worth his salt was warning of impending

famine in the underdeveloped nations of Asia, Africa, and Latin America. The less developed world, it was said, was losing the capacity to feed itself. Disaster lay as close as the year 1975.[1]

Today the warnings are of a wholly different sort. The world has an overabundance of grain. Wheat stocks have reached the level of 60 million tons. If anything, the danger immediately ahead would seem to be oversupply and glut

In three short years, a startling turnaround has apparently taken place in the agricultural output of several parts of the developing world. The Philippines report achieving self-sufficiency in rice for the first time in history this year. Malaysia and South Vietnam are predicting the same for 1971 and Indonesia for 1973. Pakistan says it will shortly be self-sufficient in all cereals, and India expressed a similar hope. Optimism, clearly, rides tall in the saddle this year.

The increases are laid to a "Green Revolution" which is based on the introduction and the rapidly spreading use of so-called "miracle grains" in the rice paddies and wheat stands of South Asia. These are new, high-yielding varieties of wheat researched in Mexico by the Rockefeller Foundation and rice developed at the International Rice Research Institute in the Philippines, co-sponsored by the Rockefeller and Ford Foundations.

Among many agriculturalists, there is euphoria about man's potential for feeding himself for years and even centuries ahead of a kind that has not been seen since the introduction of the potato into Ireland. Reams of prose are being written and conferences held on the potential of the new seeds. The general theme is that now, at last, the chance exists to eradicate hunger from our planet.

At the risk of offending some good friends who are writing so hopefully, I say . . . no. The revolution is green only because it is being viewed through green-colored glasses. (Remember the Emerald City in the Wizard of Oz? It could be seen only when you put on a pair of green glasses.) Take off the glasses, and the revolution proves to be an illusion—but devastating in the damage it can do to mankind's tardy efforts to limit the world's horrendous population growth. For optimism about man's ability to feed himself as today's rate of population growth continues is precisely what we do not need and cannot afford in the race with the population bomb.

The Green Revolution, in short, could do us all in—if it worked. The cruel joke is that it does not work.

To many, the Green Revolution is a turning point in man's long war against the biological limitations of the earth. On examination, however, "skirmish" seems a more accurate description. Because, win or lose this round, the final outcome of the war will not be altered.

Here is the "official" U.S. AID story of the Agricultural Revolution in South Asia:

"What has happened in less than three years is revealed in a few statistics . . . overall food production has risen 14 percent in the period 1967–69. And, in South Asia alone—the crucial countries of India and Pakistan—the increase has been 27 percent. AID worked with foundations, universities and others in developing new farming methods, including the most efficient use of "miracle" wheat and rice seeds that have brought about the Green Revolution. (Tollefson, 1970)."

The statement is misleading for it places all the emphasis on new technology. Consider the following items.

WEATHER

1965 and 1966 were poor weather years for the farmer of South Asia, and the succeeding years have been good. A drought followed by rain will cause a spurt in production with or without new technology! In the last 3 years, India, for instance, has increased her production of barley, chickpeas, tea, jute, cotton, and tobacco by 20 to 30% and did so with no new high-yielding varieties.

Throughout Asia, agricultural yields on virtually all crops are up. Thus, rubber production in West Malaysia was 12% higher last year than the year before. Pakistan's peanut crop is double that of 4 years earlier. Even Red China, which has only recently been reported to have the new high-yielding grains, has been able to perform agriculturally as well as India and the rest of Asia. This has been possible although fertilizer shipments to China have been interrupted (because of the closed Suez Canal and the civil disturbances of the Cultural Revolution).

Far and away the most important factor for increased production is the improvement in weather. But weather seldom gets the credit it deserves. When crops are *poor*, governments blame it on the weather. When crops are *good*, governments take the credit for the foresight and wisdom of providing fertilizer and loans to the farmer and for the clairvoyance of having conducted the research needed to develop improved crop varieties.

Thus, AID, when asking Congress for this year's money, said: "India's current successes in agriculture are largely due to a reappraisal of its agricultural strategy . . . with the help of the United States, the World Bank and other interested agencies and countries, India developed a new strategy which placed top priority on investment in agriculture. . . ."[2]

HIGH-YIELDING VARITIES

Since the early 1950s, most of the developing world has been increasing its total agricultural production and yields per acre. This has been possible through greater use of fertilizer and irrigation, improved varieties, and the opening up of new agricultural land. The concern of most who study the problem is whether or not this increase can continue to keep pace with the growth in population.

Thus, India from 1951 to 1961 was able to increase agricultural production by 46%. This was done partially with new technology but primarily by putting new land into production. As new land became scarce, the increase tapered off. To simply maintain current per capita consumption levels, India must now increase cereal production by three million tons each year (Shertz, 1970). If the Green Revolution is to be a reality, production must now grow faster than it has in the past. Bernard Nossiter, whose book on India will be published this fall, has looked at India's grain production figures from 1965 to 1970 and says that the increase "is something less than 2.5 percent. In other words, the 'revolution' has not yet increased food supply at the same rate as the growth in population" (Nossiter, 1970).

This does not mean that the new high-yielding wheats in India and Pakistan have not increased production spectacularly. Where irrigated and fertilized, crops have flourished. The same has been true in southeast Asia with rice. But while there is a promise of other crops on which to base a Green Revolution, to date there are only the two: wheat and rice.

The development of the new wheat and rice varieties having high fertilizer response without lodging resulted from imaginative research justifiably meriting recognition. However, the press agent's "miracle" and "wonder" appellation given these cereals distorted out of proportion their impact on the world.

In India, where one-third of Asia's population lives, only the new wheats have made an impact. This is unfortunate since in India wheat is a far less important crop than is rice (the production of which is three times that of wheat). Actually, according to a recent study by economic forecaster Louis Bean, the trend in increased rice yields which began in the early 1960s as a result of new technology has leveled off and stagnated at the 1964–65 level. Thus, the "miracle" rice has produced no miracle in India or in East Pakistan, the traditional rice-growing area of that country, although it has done extremely well in West Pakistan, an area not normally recognized as a major rice producer.

In discussing the new rice varieties for India, a recent U.S. Department of Agriculture report ended by saying: "For the immediate future, modest increases in yield from local (i.e., not the "miracle" rice) varieties through improved fertilizer use offer the most promise" (Haviland, 1969).

Bean calls it the "Brown and Green Revolution" to underscore its sporadic influence. In India, for instance, a third of the wheat land has been affected, but only 3% of the rice production has been touched, with the rest of the crops escaping its influence.

IRRIGATION

Irrigation is the life blood of the new cereals. For those who are accustomed to seeing wheat grown only in the United States, where no wheat is irrigated, this point needs to be understood. Virtually all the new wheats in Mexico, India, Pakistan, and Turkey—the areas where they have made an impact—are grown under artificial irrigation. They are grown, then, on the very best land in the nation, the most expensive land, the land which receives the largest capital investment, and the land with the best farmers. In the United States, we consider wheat too low in value to put on irrigated land.

The new rice varieties also require carefully controlled irrigation. In the Philippines, where the new rice is grown under irrigation, harvests are reported as two to three times that of the traditional local varieties. However, on nonirrigated land, the new varieties do no better than the standard ones.

This is important to understand. Ford Foundation's Lowell S. Hardin says that if one looks at a map "the land where this new technology, this Green Revolution, applies is a postage stamp on the face of the earth" (Hardin, 1969). The major reason is that, unfortunately, there is very little irrigated land in this world. To expand the current Green Revolution, therefore, will require expanding the amount of irrigated land, an extremely expensive operation. Even with capital, the potential land for irrigation is limited by its location, slope, and availability of water.

The hungry nations have been and are hungry because they have a poor piece of real estate. The soils are too dry, too wet, too rocky, too thin, or too mountainous to fulfill adequately the agricultural needs of the country. A Green Revolution may minimize these disadvantages, but it can never do away with them.

SUBSIDIES

Green Revolution advocates ignore the cost at which wheat and rice production has been achieved in some countries. To understand the role of subsidies, the Department of Agriculture's Director of Economics Don Paarlberg says:

"This is the inescapable fact that a price artificially held above the competitive level will stimulate production, retard consumption and create a surplus. This will be true

[1] The writer (a Washington, D.C.-based consultant in tropical agricultural development) speaks with experience. His book *Famine—1975!* was published 3 years ago.

[2] Agency for International Development, Congressional Presentation, p. H–3, 29 May 1969.

even if the commodity was originally in deficit supply. Thus a surplus is the result of deliberate intervention in the market. It is the product of human institutions, not simply a consequence of rapid, technological advance. It may or may not be accompanied by a scientific revolution. We could create a surplus of diamonds or uranium or of avocadoes or rutabagas simply by setting the price above where the market would have it and foregoing cost production control. A surplus is not so much a result of technology as it is a result of intervention in the market."[3]

The much-heralded Philippine rice self-sufficiency is a classic example of how Paarlberg's statement applies to the developing world. In 1966, the Philippine Rice and Corn Administration initiated a self-sufficiency program. Within a year, it increased the price support paid for rice by 50%. The support price of corn was also raised but to a lesser degree than rice. Rice production went up. Corn became cheaper to eat than rice, thus more people ate corn—result: a "surplus" of rice in the Philippines. With much fanfare, it was publicized that the Philippines were now able to export rice. Yet this was done at a *loss* because the world market price for rice was less than the government paid the Philippine farmer. In the words of James Keefer of the U.S. Department of Agriculture, the Philippines have "administered self-sufficiency" because they have artificially defined the level of consumption in the country. The nation's people could consume more rice, but the people cannot buy more at the price at which the government pays for it.

While many of the Green Revolution countries not only subsidize in part the price of fertilizer, pesticides, and irrigation water, *all* subsidize the production of the new cereals. Thus, Mexico supports her wheat at $1.99 a bushel or 33% above the world's market price for quality grain; Turkey, at 63%; India and Pakistan, at 100%. But since the quality of the grain from the new miracle cereals is low and they are sold at a discount, the subsidies are, in real terms, significantly higher.

Currently, there is fear of a glut in world cereal markets, but the fear "is largely attributable to expansion of production in the developed world" (Shertz, 1970) rather than to any Green Revolution in the hungry nations. The current glut is related to the support policies which all grain-producing nations follow (wheat supports range from $1.40 a bushel in the United States to $4.29 a bushel in Switzerland), policies which are often used as justification for similar subsidies in Asia, Africa, and Latin America. It should be obvious, however, that what a developed nation may do with ease an undeveloped nation might find nearly impossible to do.

The United States will subsidize her farmers with a sum approaching $4 billion this year, but this is in a nation where agriculture generates only 3% of the gross national product. India's agriculture accounts for 49% of her GNP; Pakistan's, for 47%; and the Philippines', for 33%. In these countries, there are not enough other sources of income to generate for long the money needed to subsidize the large agriculture segment of the economy.

It was interesting that the *very* day the House Foreign Affairs Subcommittee was holding its recent symposium on the Green Revolution and repeatedly pointing out to all the attendees the self-sufficiency achieved in rice production by the Philippines, the Philippine Government asked the United States for an advance of $100 million on its 1970 payments (due it for our use of military bases) in order to "stave off the emergency" arising from threatened bankruptcy.

Unfortunately, most of the developing world totters on the brink of bankruptcy with little hope of improving its situation. Within the next few years, the debt service of countries such as Indonesia, India, and Pakistan will equal nearly 50% of their export earnings.

Yet, the new varieties require irrigation water, fertilizer, and additional labor. All are expensive. For the farmer, this means financial risks. For him, risk is justified because of the support price. But, take that crutch away and fewer would take the risk.

With these high support prices, one of two things becomes obvious. Either the farmers are getting rich on the government subsidies or else the new technology is much more costly to use. There are reports of land prices skyrocketing in the area of the Green Revolution, of incipient social revolution with formerly absent landlords returning to farm their land and evicting their tenants. All of this may be true, but to what extent?

My guess is that the best farmers on the best land are profiting substantially from the Green Revolution. But the report that "hundreds of millions of rural people" (Borlaug et al., 1969) are benefiting is open to question.

In 1969, during the wheat harvest, this writer visited Sonora, Mexico, to see the experiment station where the new wheats were developed.

While there, a delegation of wheat farmers from this area left for Mexico City to ask the government to raise still higher their wheat subsidy. This may have been simply a ploy to keep pressure on the government and prevent it from lowering the subsidy. Yet the U.S. Department of Agriculture's Vernon Harness has studied the incomes of these farmers and concluded that the "man with average yields is not making much of a profit." In sonora, the average wheat farmer made $12.00 an acre while in adjacent Sinaloa, he *lost* $12.00 (Harness, 1969).

The U.S. Department of Agriculture's Dana Dalrymple cites two surveys of farmers in the Philippines who decided to stop growing improved rice varieties. Over 50% gave as their reason the "low price or added expenses" while another 10 to 15% said the new rice involved too much additional labor. He also cites a Burmese village which reduced its acreage because of the poor consumer demand for the miracle rice on both the free and black markets. The Burmese wanted to raise the rice if the government would buy the production but not otherwise. Dalrymple says, "It has been widely assumed that the increased returns from growing the new variety have exceeded the cost. Incomes have probably generally been increased in the short run. Yet there is little solid evidence on this point" (Dalrymple, 1969).

The green revolution and the 1970s

In his book, *Seeds of Change*, Lester Brown has projected a highly hopeful agricultural future because of the Green Revolution. He reflects the opinions of many who feel that "thanks to the breakthrough in the cereal production, the problems of the seventies will be much more political and less technological than were those of the sixties. Their solutions lie more in the hands of politicians, less in the hands of scientists and farmers" (Brown, 1970).

Such a view would be correct if the new varieties were as good as the press often suggests. But to overcome the biological limitations imposed by the land on agricultural production will require greater technological breakthroughs in the 1970s than anything we have ever seen. "What we have accomplished so far in the Green Revolution is the easiest part," says Will Meyers, Vice-President of the Rockefeller Foundation (Horne, 1969).

The new wheat varieties are essentially a transfer of temperate zone technology to temperate zone areas in Mexico, India, Pakistan, and Turkey. Tropical rice has so far had only limited success. Corn is going to be a more difficult crop with which to work because of its inability to be moved from latitude to latitude.

The "wonder" wheats and "miracle" rice varieties have been quickly accepted in Asia partly because governments encouraged their acceptance. Farmers who grew them were the ones who found loans for fertilizer and pesticides available to them. Governments were encouraged to do this partially out of fright stemming from the crop failures of 1965 and 1966 and partially from the pressure and salesmanship of foreign scientists and aid givers. Already many fear the consequences of this action.

The U.N.'s Food and Agriculture Organization recently held a round-table discussion on the "genetic dangers in the Green Revolution" and concluded that progress in one direction "represents a calamitous loss in the other." Plant breeders unanimously agree that it is dangerous to produce over large areas varieties with similar disease-resistent characteristics. By eliminating the great number of genetically different types of wheat and rice and replacing them with substantially the same variety, there is a loss of variability from which to select resistance to new and still unknown diseases. Speaking of this, Dr. Jack R. Harlan, professor of Plant Genetics at the University of Illinois, says, "The food supply for the human race is seriously threatened by any loss of variability" (Anonymous, 1969).

The danger of a disastrous attack by either insect or disease is greatly enhanced when a region is planted to genetically similar varieties. The consequences of this are surely to be seen in the 1970s.

"All across southern Asia (not just India) there has been a rush toward one dominant family of wheats prized for its yielding ability. . . . All of this wheat carries the same kind of rust resistance, which means that if a new race of rust to which it would be especially susceptible were suddenly to appear, much of the wheat crop of that whole vast stretch of the world could be devastated almost overnight."[4]

This is not theory without precedent. In 1946, 30 million acres of U.S. land were planted to a new group of oats (two-thirds of the oat crop), all having what was called "Victoria type" resistance to rust. Within 2 years, these oats had virtually disappeared from the country's oat fields. The reason was the emergence of a new disease which had been unknown only 4 years earlier.

In 1950, there was probably no single phase of the plant sciences more highly developed than that related to the control of a disease on wheat known as "stem rust." A strain of that rust (called 15B) had been known and watched in the United States for 10 years. Nevertheless, 15B was able to build up to epidemic levels and, in 1953 and 1954, cause the almost total destruction of our durum-wheat crop. If this were to happen in India today, the results would be disastrous.

Yet a country like India is particularly vulnerable. She has too few technicians to keep track of what is going on in her wheat and rice fields as well as too few scientists to develop new disease-resistant varieties and have them ready when needed. Furthermore, her seed industry cannot quickly multiply a new variety and get it into the hands of the farmer if a crisis arises.

The recent epiphytotics of the developed world involved highly selected crop varieties derived from a narrow genetic base. The hungry world has had a degree of protection

[3] Don Paarlberg. Address before the 12th Annual Meeting of the Agricultural Research Institute, National Academy of Sciences, Washington, D.C., 18 October 1963.

against this because of the multiplicity of types found within its unselected crops. However, the sudden introduction and widespread use of the new Mexican wheats and Philippine rice into South Asia shows how quickly this can change.

If the 1970's is to see an agricultural revolution, another problem must be solved: the efficient use of fertilizer and water. Fertilizer is expensive; most countries lack the natural resources to produce it. What the subsidies now do is make it economically possible for the farmer to use the high-cost fertilizer and water required by the new cereals.

Where the Green Revolution is said to exist, it would die tomorrow without any one of its three legs: subsidies, irrigation, and fertilizer. The economies of the developing world make all three legs fragile supports.

Finally, for the Green Revolution to produce a revolution in this coming decade, some way must be found to bring it to the tropics where a majority of the free world's hungry live. Little technological progress has been made with the basic food crops of the tropics, and virtually no aspect of the Green Revolution has reached Africa south of the Sahara or Latin America south of Mexico.

The danger in the Green Revolution optimism

Many believe that the Green Revolution has bought time to solve the world's population problem.

To me this hope is premature at best and disastrous at worst.

The potential of the current Green Revolution is too limited to expect it to provide anywhere near adequate time in which to find a solution to the population problem. Bert Tollefson, Assistant Administrator of the Agency for International Development, recently told a campus group that "AID hopes to see a breakthrough similar to the Green Revolution in individual country efforts to control population growth" (Tollefson, 1970). Like a litany, our AID officials tell of Taiwan, Hong Kong, Singapore, and South Korea lowering their birth rate without adding that even these prize examples will double, on the average, their population size within 27 years—one year longer than the rest of the developing world!

The 1969 study of India's population by Emerson Foote puts the hungry world's population growth in true perspective. When India began her population control program 17 years ago, her population was growing at the rate of 6 million a year; today, it grows at an annual rate of 15 million. If things continue this way, Foote says, the population of India would be one billion in 2000. He continues: "Long before the one billion figure would be reached, the break point would occur . . . it is entirely possible that in India and in other parts of the world for the next three years, five years or even a bit longer, the 'Green Revolution' will increase food production faster than population grows. But if this is the case, it will be a very temporary and misleading solace—only postponing the day of reckoning. . . . (The) growth will be slowed either by rational means or by indescribable catastrophe" (Foote, 1969).

Premature hope stemming from the Green Revolution contains two dangers. They are (1) the governments of the hungry nations will once again turn their thoughts away from the No. 1 problem of solving the agricultural and rural problems of their countries and resume their emphasis on pacifying the cities and worshipping the idol of industrialization; (2) of greater danger, however, is the likelihood of lessening concern over the exploding world population.

In 1968, at the Second International Conference on the War on Hunger, the Philippine "success" with the Green Revolution (although it was yet to be called the Green Revolution) was a major topic. In fact, the Philippine Undersecretary for Agriculture, Dr. Dioscoro Lopez Umali, came to Washington and brought with him a Philippine farmer who had markedly increased his production through the use of the new "miracle" rice. Before a distinguished audience, Umali translated the farmer's story as he spoke. The farmer had 10 children and said that because of the new high-yielding variety, he and his neighbors would now have enough food for all, and all could enjoy seeing their women in the condition in which they were most beautiful—pregnant. This sudden switch from concern about food shortages to praise for pregnancy was a frightening specter to some of the audience. The Philippino farmer cannot be criticized for waxing poetic over the beauties of his pregnant wife. But some felt that the Undersecretary for Agriculture, with a Cornell University Ph. D. might have suggested the danger such beauties held for his country. The Philippines, which among the world's 15 largest nations has the fastest population growth rate, will double the number of her citizens in 20 years.

Some time earlier, the Rockefeller Foundation's Norman Borlaug, while discussing the impact of the high-yielding varieties said, "It seems likely that through a combination of improvements in conventional and non-conventional food production methods, man can feed the world's mushrooming human population for the next 100-200 years" (Borlaug, 1965). More recently, however, he shortened the time to "two or three decades" (Borlaug et al., 1969).

Green revolution not enough

Virtually all authorities accept the fact that if the developing world is to be fed, the purchasing power of its people must be raised. Yield per acre is only part of the equation. *Cost* of production is of equal importance. Even with its highly efficient agricultural productivity, the United States has 5 million citizens who are malnourished because they cannot afford to buy the food they need.

Jean Mayer, President Nixon's Advisor on Food and Nutrition, says that it would take $3.5 billion more than is now being spent to solve the U.S. hunger problem. Much more than just food for the hungry is involved in Dr. Mayer's $3.5 billion figure because food cannot be separated from other problems of poverty. Nevertheless, if such a figure is accurate, think what the cost will be to solve the food needs of the developing world.

In 1967, the President's Science Advisory Committee's report on the "World Food Problem" said that it is meaningless to consider a nation's demand for, and supply of, foodstuffs independently from overall economic growth. That report put a price tag for achieving the goal at approximately $12 billion more a year in external investment than was then going into the hungry nations.

The report of the Commission on International Development to the World Bank (commonly known as the Pearson Report) stated in September, 1969 (when the Green Revolution was already a household phrase among development people) that in order to achieve the goals to which the Commission had addressed itself, foreign assistance must be increased by $10 billion annually during the next 7 years.

The FAO's enormous new Indicative World Plan, which was 6 years in the making and was presented to the Second World Food Conference at The Hague in June, "indicates" what the hungry nations must do. By 1985, the plan says, food demand in developing countries will be nearly two and a half times the level of 1962 (two-thirds of the extra demand will be a consequence of population growth). The FAO plan to meet this food requirement calls for an expenditure of $112 billion ($37 billion alone is required for expanding irrigation!). In the understatement of the decade, the plan says that the need for foreign aid will continue and "is likely to increase."

So, taking your pick among the authorities, you still need from $7 to $12 billion more a year for the developing world to feed its expanding population. Because that part of the world can barely handle its current $3 billion annual debt servicing charges, this extra demand placed on the area's agriculture must come from the developed nations. But such aid to the developing countries is now at a low ebb with no upswing in sight. Without outside financing, the Green Revolution will never get out from behind the barricades.

The conclusion is clear: Current optimism that the world food problem is being solved is premature.

Production versus reproduction

Whether the Green Revolution is a fact or a myth, the consequences of an agricultural breakthrough without an accompanying breakthrough in population control are ominous.

To feed today's world population requires the use of agricultural chemicals, the pollutants of which will have a deleterious effect on our children and on their children. But we have seen nothing yet! By 1985, the demand for food in the hungry world will more than double. If the hungry world is to then feed itself, it must increase its use of fertilizers by 100% and pesticides by 600% (President's Science Advisory Committee 1967). Such an increase in the use of chemicals to feed the projected populations could wreck our environment.

Man has, through the use of his land, turned far more into desert than he has reclaimed through irrigation. Lord Richie Calder says that in the Indus Valley in West Pakistan the population grows at the rate of 10 more mouths to be fed every 5 minutes. In that same 5 minutes in that same place, an acre of land is being lost through water-logging and salinity.

Paul Ehrlich says, "Those clowns who are talking of feeding a big population in the year 2000 from make-believe 'green revolutions' . . . should learn some elementary biology, meteorology, agricultural economics and anthropology."

Today's accelerating rate of population growth is due primarily to the consequences of modern medicine which has lowered the world's death rate without an accompanying lowering of the birth rate.

Rereading the 1936 best seller, *An American Doctor's Odyssey*, is today a disturbing experience. The author, Victor Heiser, tells of activities when he headed the Asian section of the Rockefeller Foundation's International Health Division. In a chapter entitled, "Dividends from Philanthropy" he tells not only of the successful attack on hookworm and other diseases but of the "great progress" achieved by 1934 in upgrading the "backward public health situation of 1914 for which I rejoice to feel the Foundation is largely responsible (this progress) fairly staggers the imagination."

In retrospect, the highly motivated, well-intentioned staff of the Rockefeller Foundation and other similar good Samaritans might well have been advised to slow down the dissemination of modern medicine until Asia's resources could be developed, until educational facilities and agricultural technology could be expanded, *and* some way found to motivate man to limit his population. Herman Kahn, reflecting on the good and bad effects of prematurely bringing modern medicine to a nation says, perhaps only half facetiously, the United States was fortunate to develop her resources before the Rockefeller Foundation began its good works.

Agriculturalists (and this writer is one) too glibly damn modern medicine while striv-

ing to do exactly the same thing through improved agricultural technology. More food will certainly mean that more people will live. This will accelerate the population explosion still more. Obviously, without effective population control, an agricultural breakthrough resulting in increased yields might be as detrimental to some countries as was the use of DDT on the malaria-bearing anopheles mosquito.

Perhaps no one, with a clear conscience, can deny a hungry nation the technology for an agricultural revolution. Even if he wanted to, he could not. Today's transistor radio and the jet provide the means for the knowledge and the theft of the new seeds.

However, simultaneously with the release of improved food crop varieties to a hungry nation, an effort must be made to limit that nation's population growth. Not to do so is to ignore history, and he who ignores history, the axiom says, is condemned to relive it. In this case, to relive history is to endure still another spurt in population growth.

Should we then be disappointed that the Green Revolution is neither very green nor very revolutionary? Indeed, is the world ready for a Green Revolution?

Malthus' dismal theorem said, essentially, that if the only check on the growth of population is starvation and misery, then no matter how favorable the environment or how advanced the technology, the population will grow until it is miserable and starves. Kenneth Boulding has, however, what he calls the "Utterly Dismal Theorem." This is the proposition "that if the only check on growth of population is starvation and misery, then any technological improvement will have the ultimate effect of increasing the sum of human misery as it permits a larger proportion to live in precisely the same state of misery and starvation as before the change" (Boulding, 1956).

Boulding uses Ireland as an example of this "Utterly Dismal Theorem." In the 17th century, the population of Ireland had come into balance with the carrying capacity of her land. Two million Irish lived there destitute.

Then came the 18th Century truly Green Revolution. The Irish potato was introduced to the Emerald Isle from the Western Hemisphere. Agricultural production shot up. The carrying capacity of the land increased. The Irish multiplied accordingly. By 1835, eight million Irish lived where only two million had lived in the previous century.

Then arrived a totally new plant disease caused by the previously unknown fungus *Phytophthora infestans* and the potato crop was destroyed. In the resulting Irish famines of the 1840s, two million Irish starved to death, two million Irish emigrated, and four million Irish were left on the land in abject poverty.

When there is such a thing as a Green Revolution, its name will be disaster if it arrives ahead of a Population Control Revolution.

FRANK M. WHISTON

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. PUCINSKI. Mr. Speaker, it was with a heavy heart that the people of Chicago learned of the death of Frank M. Whiston, president of the Chicago Board of Education.

The loss of his services as head of our school system in the city of Chicago is one that will be felt for a long time to come for indeed Mr. Whiston had a compassionate understanding of the problems that public education faces in urban communities, and he had worked tirelessly to find solutions.

The Chicago Tribune quite properly eulogized his enormous contribution to the people of Chicago, and I should like to include the Chicago Tribune editorial in my remarks today.

Mrs. Pucinski joins me in extending to the family of Frank M. Whiston our deepest condolences.

The Chicago Tribune editorial follows:

FRANK M. WHISTON

Frank M. Whiston was called upon to preside over the Chicago Board of Education during a period of endless troubles. Often he had good reasons to resign the job in disgust, especially in 1968 when Mayor Daley's Advisory Commission on School Board Nominations recommended that he be denied reappointment. The mayor had the good sense to reject the advice.

Thruout all the wrangling over school policies Mr. Whiston remained a courtly, old-fashioned gentleman. He kept his cool, as the young folks say, when the school system badly needed a conciliator, a conservative. In the hot dispute over the retirement of former Supt. Benjamin Willis, it was Mr. Whiston who engineered a reasonable compromise.

Chicago owes him thanks for his 23 years of service as an unpaid member of the school board and especially for the last 7 years when he was the president. Let us hope that the next president will be as levelheaded.

A TRIBUTE TO WILLIAM T. SCHMIDT

HON. JOSEPH M. McDADE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. McDADE. Mr. Speaker, last week the Commonwealth of Pennsylvania was saddened by the untimely death of a splendid man, our Secretary of Commerce, the Honorable William T. Schmidt. It would not be possible for me to describe my own feeling of loss at the death of this man who was as close to me as any man could possibly be.

I campaigned at the side of Bill Schmidt when he first ran for public office, and I knew that his incredible energy would certainly lead to victory in the race for the mayoralty of Scranton, Pa. He was indeed elected and became, I believe, the outstanding mayor of Scranton in the 20th century. His working day began long before sunrise, and ended long after sunset. He brought a refreshing candor to the office, and the people of Scranton came to know their government as they had never known it before.

He left the office of mayor and went into private business, but his enormous commitment to public service would not permit him to refuse when another call came to him. He went to Harrisburg to become an assistant to the Secretary of Commerce, entrusted with overseeing the implementation of the Appalachian program in the Commonwealth of Pennsylvania. He was shortly named Executive Assistant to the Secretary, then, Secretary of Commerce in the Commonwealth.

Through all these years, Bill had been my friend. Too seldom were we able to get together; the obligations of public office kept both of us ceaselessly committed. But in the precious times we did meet, and in countless letters and telephone calls, I was able to watch the work he was doing to build, first a city, then the State of Pennsylvania.

The people of Pennsylvania, particularly the people of Scranton, mourn his passing. They have lost one of the outstanding public servants of this or any other century. For myself and my wife, Tess, it is also a deep personal loss. I know the grief that Bill's wife, Peg, and his two daughters, Gayle and Debra must feel at their great loss. We all share that grief. But we would ask them to be consoled by this one thought when they think of husband or father. In a time when many are content to be nameless and to do little, in a time when others seek distinction in destruction, Bill Schmidt made his own very personal mark upon history, and will be remembered by those who knew him as a giant among men, building whatever future divine providence may see fit to bestow upon us.

Mr. Speaker, I will append to these remarks two editorials from the Scranton Tribune and the Scranton Times, as well as an article from the Scranton Tribune of last Wednesday:

[From the Scranton Tribune, Sept. 7, 1970]

WILLIAM T. SCHMIDT

Within the short period of less than a week Scranton has lost two of its former mayors to death, Stanley J. Davis after the fullness of a life of 81 years, William T. Schmidt all too soon at age 46 and in the high flowering of an impressive career in public service.

Bill Schmidt's passing takes from Pennsylvania at large an able and conscientious official. For the past six months he was secretary of commerce in the cabinet of Governor Shafer, a post to which he was advanced after serving nearly a year as deputy secretary of the department.

But it is as Mayor Schmidt that Scrantonians and Scranton area residents think of the very personable young man who was the principal in a surprising election campaign in 1961 which will be prominent in the city's political history for years to come.

In his first contest for public office, Schmidt, then 38, defeated Mayor James T. Hanlon, who had been the city's chief executive 16 years. The victory of the Republican nominee over Mayor Hanlon, the city Democratic leader of a city-county Democratic organization partnership of Mayor Hanlon and County Commissioner Michael Lawler, returned the GOP to City Hall and loosened a grip the Democratic Party had held at virtually every point of elective office here.

Schmidt had assisted a year earlier in the memorable campaign of William W. Scranton for Congress and so was in the vanguard of a movement which broke up a political monopoly in the area and introduced an element of balance which still persists.

Bill Schmidt did things well. He was president and salutatorian of the Tech High School Class of 1941. He took a position with the Third National Bank and rose to the office of assistant cashier. He demonstrated as mayor administrative ability and had success in his aim of involving more people and interesting more pepole in city government and its problems. And with his natural friendliness, his genuine liking for and concern for people, he won the regard and affection of many who once resented his defeating Mayor Hanlon.

Losing a reelection bid to former Mayor Walsh, who sparked at least a temporary revival in the city of old Democratic voting patterns, Mayor Schmidt had executive positions in private business before going into service with the state to display a skill and dedication capped when the governor named him to head the commerce department.

Bill Schmidt's death is truly mourned and the sympathy of the community goes out to Mrs. Schmidt and the Schmidt daughters, Gayle and Debra.

[From the Scranton Times, Sept. 8, 1970]

WILLIAM T. SCHMIDT

From president and salutatorian of his high school class to mayor of his city and commerce secretary of his state were the outlines of the distinguished record compiled by William T. Schmidt before death halted his crowded career last Sunday at the age of 46.

His capacity for leadership and service was recognized in all of his endeavors, which included responsible positions in the private sector as well as in government. But it was in public affairs he became best known, although he first aspired to public office only nine brief years ago.

Mr. Schmidt's upset election as mayor in 1961 proved to be a turning point in his own career and in the political life of the city and county. A long Democratic hold on local government was broken. Republican party fortunes have been generally on the rise in the city and county ever since.

It fell to Mr. Schmidt while mayor to educate the citizenry to the depth of the problems facing local government. He had a flair for graphic portrayal of a situation and used all of the communications media in this effort, the first local public official to do so. He also involved hundreds of private citizens in governmental affairs by appointing them to newly established citizens advisory committees.

Solutions to municipal problems did not come easily and many are still being pursued. However, the grasp of local government gained by Mr. Schmidt during his four years as the city's chief executive stood him and the state in good stead when he was called upon by Gov. Shafer to serve the Commonwealth of Pennsylvania.

He was successively a deputy commerce secretary directing state and federal economic aid programs in Pennsylvania, Gov. Shafer's representative to the Appalachian Regional Commission and, since January, commerce secretary. In these roles he brought to bear his background to appreciate a community's needs which were beyond the resources of local government. He became instrumental in channeling federal and state grants to assist them. In all of these posts he did much to help relieve this region's unique land reclamation and surface support problems and to aid in the continuation of the expansion of its industrial base.

If one word were to sum up Mr. Schmidt's remarkable career, service probably does it best. We didn't always agree with him, nor he with us, during his days at City Hall. But we consistently admired his fulltime dedication to a challenging job and do now, not only in his service as mayor but in each of the assignments he took on to improve the everyday life of his fellow man.

Mr. Schmidt's death is a genuine loss to his native city and to the people of Pennsylvania. Our heartfelt sympathy goes to his wife and daughters whose grief is broadly shared.

[From the Scranton Tribune, Sept. 9, 1970]

SORROWFUL FAREWELL TO CITY'S 25TH MAYOR: GRIEVING THRONGS GIVE TRIBUTE TO BILL SCHMIDT

(By Bob Reese)

The people of Scranton—young and old, rich and poor, known and unknown—said goodbye to Bill Schmidt on Tuesday.

Quietly and slowly, they moved in double lines into the Snowdon Funeral Home, 1810 Sanderson Ave., and passed the bier of the man who had been the 25th mayor of Scranton.

After leaving office William T. Schmidt rose to become Pennsylvania's Commerce Secretary, but he was still "Mayor" to the people standing quietly in small knots outside of the funeral home on Wednesday.

"It's been like this since 2 o'clock," Howard Snowdon observed.

A mile and one-half away, black bunting had been placed over the main entrance of City Hall and the flag at the corner of the building dropped limply at half-staff.

A reporter who had helped to "cover" the Bill Schmidt years in City Hall moved along in the slow line to the bier but his thoughts were down at the massive stone building at Mulberry Street and N. Washington Avenue.

The people in the line with him brought back the past years as if they were yesterday.

A familiar face there. It was that of a young man who back in 1961 had helped to guard the voting machines as the absentee ballots were counted, providing the new mayor with a slight edge over his opponent, the late Mayor James T. Hanlon.

Other faces were there, too. Those of present and former City Hall employes and those who had been Mayor Schmidt's political foes on City Council. Speaking quietly, the late admitted they had not always agreed with the mayor. But they added: "He was a good man."

It was perhaps the great numbers of "little people" who were there on Tuesday that really told the tale. For Bill Schmidt was one of those "little people" who back in 1961 had electrified all of Scranton with his upset victory that broke a Democratic hold on the city which had lasted 16 years.

The thoughts went flying back to the summer months of that year. A young reporter was sitting with his father on a porch in West Scranton.

It was hot and Bill Schmidt remarked about the heat when he stepped onto the porch during one of his door-to-door safaris through the city, ceaselessly seeking votes. He put the small radio from the answering service to his ear as he talked. That was typical Bill Schmidt. Always trying to do two or more jobs at once.

And other things came to mind, too. How about the day the rain gutters at City hall clogged up with sand and the young mayor at his desk was deluged with water that came through the ceiling? He laughed at the picture and article that told of the "flood" in the following morning's Tribune.

There were the serious times. Like the time he debated the man who was to defeat him, Atty. James Walsh, at the Jewish Community Center. "How did it go," he earnestly asked reporters afterward.

There were many other memories. Those of the press conferences at City Hall and of the many and varied crises that daily confront a mayor.

Remembered, too, were the nights he came into The Tribune newsroom to give reporters details of late breaking stories.

But, back to reality. The line moves toward the bier and there is Peg Schmidt, the mayor's widow, her eyes red and sad. Her daughters, Gayle, 20, and Debra, 18, are beside her. A member of the Police Honor Guard stands at the head of the casket.

The line moves quickly and a reporter says "goodbye" to a mayor he knew and liked.

Bill Schmidt will be buried today in Camp Hill where his brother, Richard A. Schmidt, is interred. His brother was killed Feb. 25, 1969, in an automobile accident.

City Hall will be closed from 11 a.m. to 1 p.m. as the funeral takes place from Trinity Evangelical Lutheran Church, Camp Hill. Burial will be in St. John's Cemetery, Camp Hill.

A detail of uniformed Scranton policemen will act as pallbearers and the city will be represented by various officials including Mayor Eugene Peters and Council President Anthony Cognetti.

TRIBUTE TO RUBEN SALAZAR

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. ANDERSON of California. Mr. Speaker, a pall hangs over Los Angeles for all of us have lost a friend. Ruben Salazar, writer and reporter, who died needlessly during the recent riot in East Los Angeles, contributed much to our community.

Ruben Salazar was not a fence straddler, he was not a spectator in our society. He was committed to justice, and he was involved in the struggle of the Mexican Americans to secure their rights. He was committed to change—not by violent revolution—but by exposing the injustices that occur; and by appealing to the sense of fairness inherent in Americans.

This Chicano spoke for Chicanos; he spoke to them and, in addition, he re-

layed their message to the part of America that has ignored their plight.

Ruben Salazar understood exploitation, deprivation, and discrimination. He knew that the housing for Chicanos was inadequate. He knew that the wages paid to the Mexican American were not sufficient to feed, clothe, and educate his family. Thus, he served as a major link between the Mexican American and the rest of the community.

Ruben Salazar will be missed—but he will be remembered. We must each attempt to become as dedicated and as committed to justice as was he. We must continue to work for a realization of the ideals he espoused so articulately, and so well.

DANGERS IN MILLS TRADE BILL SEEN BY HONOLULU ADVERTISER

HON. SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. MATSUNAGA. Mr. Speaker, one of the most controversial bills likely to be considered by the House before adjournment is the 1970 trade bill. If it is enacted in its present form, this bill might well trigger a regressive world trade war. It will most certainly mean higher prices for American consumers least able to afford them.

The entire garment industry in Hawaii, employing about 3,000 persons, is alarmed at the prospect of the bill's passage because of the harsh import quotas on textile products.

All of these unfortunate possibilities are spotlighted in a perceptive editorial which appeared recently in the Honolulu Advertiser, and which I offer for inclusion at this point in the RECORD:

[From the Honolulu Advertiser, Aug. 28, 1970]

THE TRADE BILL

Sometime next month the House of Representatives will vote on the trade bill which has come out of the Ways and Means Committee.

For the sake of the consumer, for world trade harmony and for the principle of friendliness between nations, this bill should not pass. And, if it does pass both House and Senate, President Nixon should veto it.

The bill, now related to textiles, shoes and oil import quotas, has an immediate link with Hawaii.

Hawaii has a blossoming $35 million a year garment industry that employs 3,000 persons. The local manufacturers import almost all of their textiles from Japan and Hong Kong.

The quota on textiles contained in the bill would, as Governor Burns says, seriously impair the Hawaii garment industry.

Rep. Spark Matsunaga has asked that Hawaii, Alaska and Puerto Rico be exempted from the textile import quota because they are non-contiguous areas.

Of course, the trade bill contains dangers that go beyond these local angles. It is feared that as the bill gains momentum in Congress, more and more articles will be added to the quota list.

The inevitable result would be retaliation by other nations. A trade war would be a distinct possibility.

The bill also may be, as a White House consumer affairs spokesman believes, "the most significant anticonsumer legislation now in the Congress."

Import quotas mean higher prices. Special interests gain at the expense of the public interest.

THIS IS YOUR SON CALLING FROM VIETNAM

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. DADDARIO. Mr. Speaker, I rise today to call the attention of the House to the valuable services performed by amateur radio operators—"hams" as they are frequently called. Operating their own private radio stations, hams render emergency assistance in providing communications during disasters such as Hurricane Celia. We have all read accounts of such activities and are well aware of the invaluable help these volunteers provide. What is not so well known is the continuing assistance hams provide in alleviating a most human problem—the loneliness and suffering that comes from the separation and lack of communications between our servicemen and their families. Those of us who daily see our wives, children, and close friends forget that there are hundreds of thousands of young people whose contact with their families is limited to letters and occasional photographs. Like the concerned public servants they are, hams have stepped forward to lend their aid and provide radio communications facilities so that servicemen abroad can talk to their loved ones at home. Using "phone patch" equipment coupled directly to their own radio receivers and transmitters, hams call friends and parents of servicemen on the telephones and let them talk to their absent soldier in Vietnam who use military radio facilities over there. Acting as the vital link, the ham provides a much needed human contact between individuals separated by the war.

An excellent article detailing these phone patch activities recently appeared in Parade magazine. I take this opportunity to insert the article in the CONGRESSIONAL RECORD and commend it to the attention of all Members and other readers:

THIS IS YOUR SON CALLING FROM VIETNAM

(By John G. Rogers)

MILLINGTON, N.J.—Without even leaving their peaceful mountaintop home in northern New Jersey, Mr. and Mrs. Alexander A. Yankaskas and their children are intimately and busily in touch with the Vietnam war nearly every day of the year.

Yank, as he is called, and his wife Helen are amateur ham radio operators and on some days their powerful short wave equipment installed in a den off the living room relays as many as 140 telephone calls to parents, wives and sweethearts from U.S. military men in Vietnam.

HOUSEWORK WAITS

"When reception is good and the calls are piling up," says attractive Helen, "the housework just doesn't get done. It has to wait for a break."

"Most of the conversations are happy ones, full of love, hope and emotion," says Yank, pilot for the private planes of the Ronson Corp. "We know because we have to listen in order to flip the switch whenever one of the parties says, 'Over.' But sometimes you get a sad one. The other day this guy asked his wife, 'Why haven't you been writing me?' And she told him, 'You'll find out in a few days when the divorce papers arrive.' "

Yank's station—AFB2DBF—is one of 165 in the U.S. which take part in the program known as MARS—Military Affiliate Radio System. Most of the members are hams, like Yank and Helen with their receivers and transmitters right in the home. One of the most prominent of them is Sen. Barry Goldwater of Arizona, who operates from his hilltop residence in Phoenix. While the basic business of MARS is to provide a backup communications network in case of emergency, the MARS hams are principally occupied these days with the Vietnam phone calls.

"I've sat here at the set as long as five hours without even getting up," says Yank. "With all those phone calls waiting to be handled, you don't just tell Vietnam you're closing down. And I wouldn't want to, either. This is my way of being involved. There's a great kick in bringing a boy in touch with his mother from halfway around the world."

MARS has handled some 2 million calls from Vietnam since December, 1965. The procedure is this. The serviceman goes to one of the 76 MARS stations maintained by the military in Vietnam and waits in line. Meanwhile, he gives the MARS operator his name and the telephone number he wants to reach in the U.S. The MARS operator sends those names and numbers to a U.S. operator such as Helen Yankaskas. PARADE watched her at work the other day. She dialed the first phone number—it was Raleigh, N.C.—and when someone answered she explained who she was and asked whether the Raleigh number would accept a collect call from Millington, N.J., from Sgt. Billy Smith. The reply was an emotional affirmative. Helen told the Vietnam operator to put Sergeant Smith on and the conversation began—by short wave radio from Vietnam to the Yankaskas home and by commercial telephone on to Raleigh. The only cost was the phone bill.

"Sometimes," says Helen, "they're expecting the call and sometimes it's a complete surprise out of the blue. A mother or a wife may gasp and then become speechless. If that happens we sort of settle them down a bit so they can get started talking."

SHORTWAVE DRAMA

The variety of calls is as broad as life. A girl friend pleads, "When the next letter arrives, tear it up. I didn't mean those things." A soldier's wife in a maternity ward tells him he has a new son or daughter. Many young men call to reassure families that their wounds are slight. One call was from a sergeant who said that a young soldier was out of control and needed advice from his father. So dad got on and from Cleveland, U.S.A., spoke the few words to his son that straightened him out in a remote Vietnam military base. There have even been a few marriages performed over MARS.

Yank and Helen have placed phone calls to all 50 states and 12 foreign countries. The two oldest of their six children live away from home but Kurt, 18, is a skilled operator and pitches in to help. The contribution of Jean, 16, is to run the kitchen when her mother is tied up at the radio. Mary Christine, 9, and Alexander Jr., 7, like to hang around the den—"ham shack" is the correct term—and listen in on conversations. As they arrived home from school the other day, they watched their mother complete the 23,892d call handled by the Yankaskas station.

AROUND THE CLOCK

Senator Goldwater's station in Phoenix has a club of more than 25 operators which enables it to spread out the work and operate

24 hours a day. But the Yankaskas family operation ranges from 10 to 18 hours. When he isn't flying, Yank puts in a long schedule and Helen serves him many a meal at the set. He, in turn, is greatly appreciative of her help and understands that sometimes she may put radio ahead of housework. "Only dull people have immaculate houses," says Yank. Their ham togetherness extends even to their personal call letters. He's WA2DBF. She's one letter away at WA2DBG.

It's a long and arduous devotion the MARS operators contribute but they love it and feel fully rewarded by letters such as this one Yank and Helen received from a mother last December: "God bless you. Hearing his voice and knowing he is all right was the most wonderful Christmas present we could have had."

DIRECT ELECTION OF THE PRESIDENT

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. DERWINSKI. Mr. Speaker, this morning's Chicago Tribune carries a very effective and timely editorial on the constitutional amendment which is now before the other body. Many Members of the House I would trust have looked at the measure again with more practical thinking than they exhibited when the amendment was literally stampeded through our body. I would hope that the Senate will reject this proposal in its present form which I believe would do a disservice to our political system. I direct the attention of the Members to the September 14 Tribune editorial which follows:

[From the Chicago Tribune, Sept. 14, 1970]

DIRECT ELECTION OF THE PRESIDENT

The Senate has opened debate on a constitutional amendment providing for direct election of the President and Vice President. A nationwide popular vote would prevail and the electoral college would be abolished. The proposed amendment provides that if no team of candidates receives 40 per cent of the popular vote, a runoff election would be held between the top two pairs.

We find no pressing reason for an amendment of this sort, which is another reflection of the itch for innovation merely for the sake of innovation. The specter has been raised that a shift of 42,000 votes in the 1968 Presidential election might have given George Wallace of Alabama, a third party candidate, the balance of power.

Direct popular election of President and Vice President would be the final blow to federalism, the principle on which the Union was founded. The sovereignty of the states has been enormously diminished by the centralization of power in Washington. A direct popular vote would remove them entirely from the electoral process.

There are other objections of almost equal force to the proposed amendment, which cleared the House a year ago by a vote of 339 to 70. A system depending on a nationwide head count would almost certainly weaken the two-party system by encouraging the rise of splinter parties, which have been the bane of European politics, especially in France and Italy.

As Rep. William Clay of Missouri said during House debate, "The likelihood of division and splinter parties would be encouraged by the direct popular vote. The factions of the present parties who do not compose the majority—but a large minority at their respective conventions—would likely feel compelled to strike out on their own to reap the sentiment which exists for their position and candidate.

"If it were unnecessary to win the individual states to win the Presidency, the mere possibility of winning by precluding another candidate's majority would prove too irresistible to pass up. After all, it takes $20 million to finance such a campaign—and with direct popular vote, a candidate would not have to travel the 50 states or concentrate on the total United States populace when a section or a sector of it is sufficient to throw the election."

Mr. Clay predicted the appearance, under such a system, of black separatist, conservative and liberal parties, working outside the existing major parties. He said they were certain to take root when it becomes unnecessary for them to work within the major political parties. Public opinion would be radicalized and the rights of all minorities would be endangered by removing incentive for compromise.

A more practical objection to the proposed amendment is that it has little likelihood of being ratified by three-quarters of the states [38], as required by the Constitution, for 34 of them would be adversely affected. Sen. Carl Curtis of Nebraska, for example, said his state had 0.92 per cent of the present electoral vote for President and Vice President, whereas in the 1968 election it had only 0.73 per cent of the popular vote.

If any change in the present system is in order, it would be opportioning the electroal vote by congressional districts, with two additional electoral votes per state as a bonus to the state winner. That would be eminently fair, and it would preserve the present constitutional balance.

ELECTORAL COLLEGE REFORM: AN IDEA WHOSE TIME HAS COME

HON. BERTRAM L. PODELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. PODELL. Mr. Speaker, in an age when direct elections provide one important indicator of democracy, this Nation's method of electing a President stands out as markedly undemocratic in form. The system now in use—election by an electoral college—results in a President who is only indirectly elected by the people of this country.

A constitutional amendment is required to bring much-needed reform to our presidential elections. On September 19, 1969, the House of Representatives took the first step toward bringing about change in that system. On that date, the House adopted House Joint Resolution 681 providing for the abolition of the electoral college. The President would be elected by direct popular vote. More specifically, the candidate who received a plurality of the popular vote would be elected. In the event no candidate received 40 percent of the vote, a runoff election between the top two votegetters would be held.

Approval by two-thirds of the Senate and then by three-fourths of the State legislatures is required before House Joint Resolution 681 can become an amendment to the Constitution. I believe that the people of this country should press for direct popular election of the President. Virtually every other election in America is now decided by popular vote. The glaring exception, of course, is the only true national official—the President.

Under the present system, each State is given a predetermined number of votes in the electoral college. This number is calculated by adding the number of Representatives a State has in the House of Representatives plus its two Senators. New York State, for example, having 41 Congressmen and two Senators, has 43 electoral votes.

The candidate who receives a plurality of the popular votes in a State receives all of that State's electoral votes. A majority of the votes in the electoral college is required for election to the Presidency. Should no candidate receive a majority of the electoral vote, the House of Representatives chooses the President from among the three top candidates. In the House, each State delegation casts one vote as a unit, and 26 votes are needed for election.

This system as it now stands could result in situations in which a candidate who receives a plurality of the electoral vote would actually lose that election. Should this occur, the will of the American people would not be reflected in the results.

In four of our presidential elections, in 1880, 1824, 1876, and 1888, the winner of the plurality of popular votes did not become President. In 1880 and 1824, the candidate with the largest percentage of the popular vote lost the election. In 1876, the votes of the electors proved indecisive, and a special panel had to be appointed to elect Hayes over Tilden. In 1888, Grover Cleveland lost to Benjamin Harrison in the electoral college, although he, too, had more popular votes than the final victor.

The following facts point out the need for reform:

First. New York State with a total population of 16,782,000 has 43 electoral votes. The States of Alaska, Nevada, New Hampshire, Vermont, Delaware, Wyoming, North Dakota, Hawaii, Idaho, Montana, South Dakota, and Rhode Island have a combined population of 6,364,000. Yet they have a combined electoral vote of 43—the same as New York State.

Under this system, then Alaska's electoral votes—three—represent one vote for every 75,000 residents. In New York State electoral votes represent one for every 390,000 New Yorkers. This is clearly an inequity that should be corrected.

Second. Because a candidate needs only a plurality in 12 of the largest States to be elected President, a candidate can win a majority of the electoral vote with only one-fourth of the total popular vote. He could achieve this by winning the electoral votes of New York, California, Pennsylvania, Illinois, Ohio, Texas, Michigan, New Jersey, Florida, Massachusetts, Indiana, plus two additional electoral votes.

Third. If the election is thrown to the House of Representatives there is the possibility that the 26 smallest States with 36 percent of the votes could decide the election.

Thus the inequity of the present system is clear, and while direct election of the President is not a perfect system, it

is the best of the plans that have been proposed. Direct election is the only plan which will guarantee that the winner of the popular vote will also be the winner of the election.

The campaign in 1968 revealed still another drawback of the electoral college: The faithless elector. The faithless elector is the one who disregards the wishes of his constituents by not voting for the candidate to whom he was pledged. In 1968 an elector from North Carolina cast his electoral vote for George Wallace rather than for Richard Nixon, the candidate to whom he was pledged. This problem would be eliminated under the direct election system.

Still another undesirable feature of the electoral college is the unit rule. This rule permits the candidate receiving a plurality of the State's votes to receive all of that State's electoral votes, regardless of his marginal victory. One candidate may receive a plurality of 100 votes in one State, and another a plurality of 1,000,000 votes in a different State. Each candidate would then receive all the electoral votes in the particular State in which he was the victor—with no regard to his margin of victory.

The unit rule acts to disenfranchise those citizens voting for their State's loser. These votes can have no effect on the national election, regardless of how close the election is in their own State or in the Nation. Under direct popular election, the issues and problems created by the unit rule would be eliminated since all votes would be tabulated nationally. Each vote would count as much as any other vote.

The electorial college system discourages national campaigns. Small States are often ignored in presidential campaigns. Candidates concentrate their efforts on large swing States. Direct election would make every vote equal to every other, regardless of the State in which it was cast. This would then force candidates to run national campaigns in the true meaning of the term.

Direct popular election of the President is the only system which would eliminate all of these evils that I have tried to elaborate. It would extend the one-man, one-vote principle to the Presidential sphere.

The amendment which was adopted by the House provides that in the event that no candidate receives 40 percent of the total popular vote, a runoff election would be held between the two top vote-getters. Forty percent was chosen as the percentage because it was felt that 40 percent would be sufficient to provide a mandate for governing, and would be low enough to prevent frequent runoffs. It should be noted that 15 of our Presidents received less than 50 percent of the popular vote, and among them being Lincoln, Truman, Kennedy, and Nixon.

For many years, I have wholeheartedly supported the direct election of the President and have spoken out on this issue. According to recent polls 80 percent of the American people support the direct election of the President. The House has already acted affirmatively by passing this legislation. It is now time for the Senate to act. This measure should be given priority by the Senate and then by the State legislatures. It should be ratified as our XXVI amendment, providing for the direct election of President, without delay.

MRS. JEAN RANDOLPH

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. CONTE. Mr. Speaker, death has claimed one of the great women of western Massachusetts this month and I would like to take a moment of this body's time to pay tribute to her. Many Members may have had the privilege of knowing Mrs. Jean Randolph, the widow of Jack Randolph, a former great reporter for the New York Times.

Mrs. Randolph was an activist, a warm and understanding activist in everything she did. She and her husband were known to thousands, not only in the small town of Colrain in Franklin County, Mass., where they made their home, but in New York City and many other areas where her late husband's work took them.

At the time of her death, Mrs. Randolph was still actively involved in many pursuits, not the least of which was running for local office in Franklin County.

I had the privilege of knowing this great lady and working with her throughout most of the 20 years of my public life. Western Massachusetts is diminished by her death, and I, personally, have lost a friend so unique that I know I shall not know her kind again.

The Greenfield Recorder, the daily newspaper published in Franklin County, recently ran two articles on Mrs. Randolph's death which I would insert in the RECORD at this time:

MRS. JEAN RANDOLPH 59, DIES

Mrs. Jean B. Randolph, 59, candidate for Republican nomination for Franklin County register of deeds and proprietor of The Vikings, collapsed at a political meeting in Shutesbury last evening and died.

She was attending a "meet the candidates" night at Shutesbury town hall and had just addressed about 40 persons. An ambulance took her to Cooley Dickinson Hospital in Northampton, but she was pronounced dead on arrival by Dr. Thomas Corriden, medical examiner.

She was born Jan. 6, 1911, the daughter of George S. and Emma (Adams) Belden. She attended Smith Academy in Hatfield and was graduated from the University of Vermont in 1931 with a bachelor of philosophy degree.

She had been a teacher at New Salem Academy from 1931 to 1934, at Powers Institute in Bernardston from 1943 to 1945 and in Greenfield, where she taught at the Junior High School from 1956 to 1958 and at the high school in 1961.

In December, 1961, Mrs. Randolph opened The Vikings, a shop at 96 Mohawk Trail which she operated until her death. She obtained her license as a real estate broker in 1964, and last year she became associated with Massamont Realty, Inc., of Shelburne Falls.

She was married to the late John W. Randolph of Crowley, La., in 1934. Randolph, field and stream editor of the New York Times, died in 1961. They had lived in Colrain more than 20 years.

As a Republican, Mrs. Randolph served as vice-president and program chairman of the Women's Republican Club of Franklin County from 1960 through 1968, and was Republican Town Chairman for Colrain from 1946 to 1954 and from 1960 through 1968. A member of the Franklin County Republican Club, she represented Colrain as a delegate to the state conventions of 1956, 1964, 1966 and 1968. She also served as the Franklin County campaign manager for Laurence Curtis in his 1964 bid for the Republican nomination to the United States Senate.

She was a member of the Congregational Church of Colrain.

She announced, on June 10, her candidacy for the Republican nomination as register of deeds for Franklin County.

Survivors include a son, John D. Randolph of Bennington, Vt., and Mrs. Belden Merims of New York City.

Arrangements are incomplete at this time, awaiting the arrival of Mrs. Merims.

JEAN RANDOLPH JOINS HER BELOVED JACK

(By Art Smith)

When death in 1961 ended the career of Big Jack Randolph, Colrain-based writing star of the sports staff of The New York Times, there was mourning all along the nation-wide trails trod by the vagabond journalists of his day.

Now Big Jack's beloved widow, Jean, is dead and once more the veterans of the country's top newspaper towns—New York, Chicago, Philadelphia, Detroit, Washington, St. Louis and a host of others—will pause to recall the laughing, carefree pair who once lived and worked among them.

Because that's what they were—a pair—and all Colrain and Greenfield and Franklin County knew them. For 20 years they lived in the wonderful old house at the crest of Smead Hill, Jack commuting weekly in his last years to New York and Jean—when she was not travelling with him—bringing up their daughter and son, Belden and John, who were to give Jean four grandchildren before time ran out for her in Shutesbury Thursday night.

Now, at 59, she will join Jack in the Smead Hill earth, a couple of hundreds of yards from the old house, in a birch grove overlooking the enchanting Green River valley both of them loved.

Before cremation, there will be visiting hours at the McCarthy Funeral Home, 36 Bank Row, Sunday evening, 7–9. A funeral service will be conducted at the Colrain Congregational Church Monday at 2 p.m.

Belden, now Mrs. Robert Merims of New York City, and John, now a publisher of outdoor sports papers in Vermont, arrived Friday to take charge of arrangements.

Like her husband, Mrs. Randolph was a restless soul and she remained in character to the end. At Jack's death nine years ago, she opened The Vikings at 96 Mohawk Trail, specializing in imported Arabian dinnerware. She also was a real estate agent associated with Massamont Realty, Inc., of Shelburne Falls. Before and, periodically, after her marriage she was a schoolteacher in New Salem, Bernardston, Greenfield and in New Jersey. She was a graduate of the University of Vermont, where she took her philosophy degree, and did graduate work at the University of Massachusetts.

When a massive heart attack struck her down, Mrs. Randolph was running for the Republican nomination for county register of deeds. She had suffered a heart attack a year ago but undertook the campaign because she believed she had recovered her health. She had finished a campaign address in Shutesbury only a few moments before the fatal seizure. She was born in Hatfield and for years had been active in local and state Republican politics but it was her first bid for public office.

Perhaps few residents of Franklin County

were as widely known as Jean Randolph and her husband. Where Jack moved, Jean moved, and to such a degree did their warm and gay personalities complement each other that their acceptance in journalistic circles was immediate and lasting. Yet they would always return to Franklin County and to the wonderful old house atop Smead Hill where they entertained visitors from all over the nation.

It seems worthy of mention that young John Denson Randolph was named for John Denson, now a resident of Old Guilford, Vt., perhaps the last of the great editors of American journalism, a close personal friend of both and for many years an associate of Jack's.

THE SIGNIFICANCE OF THE GREEK WAR FOR INDEPENDENCE

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. PUCINSKI. Mr. Speaker, recently, the Greek Ambassador to the United States, the Honorable Basil Vitsaxis, delivered a speech on the significance of the Greek war for independence in 1821. He spoke at the Ahepa convention held in my district.

The struggle for freedom, liberty, and human dignity which culminated in a revolution for independence shocked the oppressors of the Greeks. It was dismaying to the heads of state of Europe and the Ottoman Empire that the Greeks would covet nationhood, and be willing to fight and die for an idea whose time had come.

Lord Byron, who was to die while fighting for Greek independence, wrote:

> The Sword, the Banner, and the Field,
> Glory and Greece, around me see!
> The Spartan, borne upon his shield,
> Was not more free.
>
> Awake! (not Greece—she *is* awake!)
> Awake, my spirit! Think through *whom*
> Thy life-blood tracks its parent lake,
> And then strike home!

With these words penned only 3 months before his death, the great English poet reminds us once more of the heritage which Greece has given to the world; namely, the conception of the existence of personal freedom and self-government.

But this last poem of Byron's reminds us of something more which is too often forgotten by many of us—that Greece in the opening years of the last century led the way among Europeans in the search for freedom and nationhood from the domination of the imperial powers which for several centuries had divided up and subjugated many peoples within the confines of a few powerful states.

With the sesquicentennial of Greek independence approaching, it is well to remind ourselves that the initiative of the Hellenes and their success in gaining freedom from the Turkish Ottoman Empire gave example to those in other lands who sought similar goals. When we think of these European nations which won inpendence and unification in the 19th century, we turn at once to Italy and Germany, to be soon followed by Finland and Norway, Poland and the Balkan nations in the early years of our century, but how many of us remember that it was Greece which demonstrated to these other peoples that freedom from the domination of the great European empires was possible?

It is a valued source of pride to those of us in this country that we were the first in this hemisphere to oppose colonialism and to strive for freedom and self-determination so it is indeed fitting that we take this opportunity to acknowledge the debt owed by many to Greece, the first nation in Europe to rise up against colonialism and to seek goals similar to ours.

Perhaps in retrospect it is really not too surprising when one recalls that in former centuries these were the people who twice within the space of 10 years humiliated the greatest autocratic empire the world had known up to that time. The countrymen of Miltiades and Themistokles could have no other attitude toward the Ottoman Turks than that which their forbears had toward Darius and Xerxes.

With these things in mind, I am pleased to place in the RECORD today Ambassador Vitsaxis's excellent speech on the significance of Greece's struggle for independence, which was to eventually spark and change the character of the old world:

SPEECH BY AMBASSADOR VITSAXIS

Nations are judged by their acts, and history is their stern judge.

The Hellenes can stand before anyone with their heads held high and proud. They have never hesitated when confronted with the great responsibilities which history erected on the road they have followed for centuries. Their victories express the indomitable moral strength of the Hellenic nation, whose continuity is in itself proof, of the nation's unity.

The 25th of March, in this respect, is perhaps the brightest symbol of the eternal Hellenic Idea, because it embodies the unceasing Hellenic quest for human redemption from the ties of the mind and of the soul. For, the Greek revolution was not only a series of heroics and sacrifices, before which the entire human race stood awed; It was not only a phenomenon of collective courage, before which history bowed with respect; Nor was it merely a revolt against the tyrants. It was, above all, a large ethical movement which had, at its base, the most beautiful, the most noble, the most worthwhile, that nests within the human heart.

"Freedom or death"—this was the oath of the enslaved, who tossed his head proudly, opened his soul to the message, sent from the depths of time by his ancestors, and carved, with the flame of his sword, the bright road of tomorrow.

Freedom and death, in their broadest meaning, were the worlds that confronted each other in Greece, in 1821.

Freedom or death. Is not the life of a slave, death? Is not the unredeemed soul of man, dead? Is not the darkness spread by the ignorance of the mind, a living grave?

The free thinking which illuminated the generations of Hellenes and led them to the bright, peaceful victories of the mind, flared and illuminated again the course of Greece and led it from the ethnic annunciation, through Calvary, towards the resurrection of the nation.

This very light dazzled our national poet as he envisions embattled Greece:

> "A torch in the hand,
> A flame at the feet,
> And all around is light".

The unknown fighter of 1821, who stained the soil of Greece with his blood, had felt with the faultless sensitivity of his Hellenic soul the infinite greatness of his struggle. The whole Hellenic World became gigantic within him and the unworldly voices of myriad heroes echoed in his breast.

How clearly the poet pictured this, when he wrote:

> "I hear within my being, deep
> Those thrice-great, mighty
> Fathers of Hellas,
> They spoke alone—those dreadful moments
> The immortals."

But what was the political climate of Europe when the uprising broke out? What were the frames within which the Hellenic movement was born and had swelled up? And, generally, what was its deeper meaning in history?

The wars which had ripped Europe in the beginning of the century, wars by ideals of human freedom, had resulted, with tragic irony, in the establishing of a dark alliance, the so-called Holy Alliance, which from 1815 controlled the political life of Europe and drowned every liberal movement.

The year 1820 marked several revolutionary movements in the Italian and Spanish peninsulas. Their roots were mainly political, their purposes stemmed from the French ideas which had shaken Europe toward the end of the 18th century. The dark alliance which cast its heavy shadow in Europe set immediately in movement its diplomatic machinery. Metternich spoke of this with the most bitter words: "It is a deadly poison", he said, "which endangers the body of society in its most sensitive areas; it is dangerous for the peace of Europe and a scandal in the eyes of the whole world". Marshal Richelieu wrote: "The Greeks could not have found a worse moment to revolt".

And indeed, they could not have chosen a worse time. In vain Kapodistrias, the political advisor of the Czar, tried to convince him that the Greek movement was not like those which aimed to shake thrones, like those which stem from political calculations, and which hide at times, impure intentions. We must confess that the confusion which Metternich intended to cause was an easy matter, for indeed a movement such as the Greek one had never broken out in Europe before.

The proclamation signed by the Czar, together with the Emperor of Austria and the King of Prussia, at the end of the conference of May 1821, was characteristic of the prevailing mentality.

"We shall ignore", stated the three monarchs," every change that is made by force of arms in the interior state of the nation, and we shall take the necessary measures which these situations demand to confront the criminal events which have occurred in Eastern Europe."

In the eyes of powerful Europe, the movement of the Hellenic nation was, from its very beginning, the form of conspiracy and its aim was considered to be the shaking, by force of arms, of the interior security of the Sultan's empire.

Eighteen months after the first outburst, when the Greek soil was drenched in blood, the Conference at Epidaurus had stated with that admirable concise declaration of January 15, 1822, the true character of the struggle:

"The Hellenic *nation,*" stated the declaration, "attests to heaven and earth that it exists".

And yet, the powerful ones of Europe, who had assembled in Verona, closed their ears

stubbornly to the cry of Greece who was struggling in vain to convince them that her fight was different and that its ideological basis was a completely distinct one.

It is worth mentioning here the contents of the mandate signed by Athanasios Kanakaris, then vice president of the legislative body—a message to the assembled monarchs of Europe in Verona. This message was brought by Andreas Metaxas, the Bishop Germanos of Paleon Patron, and the son of Petrobay Georgakis Mavromihalis. The message stated:

"Twice, from the beginning of the war, Greece raised her voice, requesting aid and understanding from Christian Kingdoms of Europe, or demanding, at least their neutrality in her present holy struggle.

"Rivers of blood have flowed to date, yet the flag of the lifegiving cross waves unfurled over the fortresses on all the mainland, in all parts of Epirus, Thessaly, in Crete and in the islands of the Aegean Sea. The temporary Greek Government hastens to announce by this declaration, that it shall never accept any treaty, no matter how beneficial it appears, unless proper audience is given to her lawfully dispatched ambassadors".

But those "lawfully dispatched ambassadors," as the declaration called them, never reached Verona. The mighty ones who conferred there—and they were not few: 2 emperors, 3 kings, a cardinal, 3 foreign ministers, 20 ambassadors, and 10 secretaries of state—blocked the road to those bringing the paper drenched in blood, which contained the great and glorious message from Greece.

Pope Pius the VII, to avoid displeasing the conference and fearing even for his own safety which he believed was threatened by the Hellenic movement and the ideas that it represented, stopped the Greeks at Ancona and forced them to turn back, unsuccessful, to Greece.

Back, also, turned the message which emanated from the inner depths of the pure Hellenic soul—a soul which naively believed that the European Monarch should see more clearly the justice which was as great as her 3,000 year history.

Three times the message spoke of the *Hellenic nation;* three times it asked for justice, liberty, equality, and independence, not for individuals, but *for the nation;* three times it formulated a *new idea* which was destined in a short while to shake all of Europe and to constitute an ideological lever to reshape the political camp of the Continent.

"The Hellenic nation attests by heaven and earth that it exists."

Vibrant nations may not, alone, create the historical moment. In fact, they may appear at times to contradict the course of history. And yet, whether it is obvious or not, in reality they express the tendencies of their time.

The Greek uprising of 1821 was from this point of view, a preamble to history. It was the morning song of the new concept of nationalities which resonated in the eastern basin of the Mediterranean and the Balkan area. It was the early expression of that which, by historical necessity was destined to become, shortly, common conviction, truth and law. For 3,000 years the sacred task of Greece was such: to precede, not to follow the search, never resting, never being satiated, never quenching its thirst from the fountainhead of life. Within her, unceasingly blow the winds of freedom and of creation, and her heart is flamed from the quest of a new idea.

In spite of her being enslaved and insignificant, she was the first to feel through the unerring sensitorium of her aliveness, the deepest significance of the historical moment which was ripening in the 18th century.

The seed which flowered the spring of 1821 on Hellenic soil was a strange seed because it was sowed without being born from the same flower, because it was new—of the first origin—like the creation itself.

We said that vibrant nations perhaps do not mold the historical moments, but they express them. *This was the deeper meaning of* 1821.

The Hellenic revolution was not only a movement of a proud nation, a movement toward human freedoms, it was something more. *It was the expression of a new idea* which had not yet become a conviction, and which was soon to light fires on all European soil.

It was the sweet dawn of a new concept—the nation. This concept originated from the realization of the value of the common historical ties; it brought recognition of ethnic identity; it made possible the renewal of the political architecture resulting in reshaping the balance of powers before the new historical quests.

We said that it stemmed from the realization of the value of the common historical ties. Thus history was becoming the recollection of a nation and was transformed from a sterile teaching to a live thread which tied the generations together—which tied the present with the past and which made possible a new outlook on the future.

It also brought forth recognition of the *concept of ethnic identity* for this period which was seeking new political shapes and new philosophic and social foundations in view of the unraveling of the 18th century world. The idea of ethnic "identity," in broader meanings, became a valuable asset, which helped greatly, as we know, in the building of the new Europe and of the world to come.

In 1453, Byzantium, a state, was conquered and its people enslaved. In 1821 a *nation* rose in its place united as one body. A nation that leaped automatically, that became conscious of itself as from historical premonition and which sealed prophetically, with its blood, not only the boundaries of its own country, but the new map of Europe.

We can be proud of the Greek Revolution not only *as Hellenes but in general, as human beings.* For with her flame she melted the bonds which held prisoner, the anonymous units within the morally or historically unjustified state boundaries, and paved the way toward the validation of the moral unit which is the nation. And this was, for that era, progress and gain for the entire human race.

We can be proud of the Greek Revolution as human beings, because I believe that this is the measure by which we must judge the true value of historical events, since no conquests and no victories have any meaning or substance over the human being and beyond it.

MAN'S INHUMANITY TO MAN—HOW LONG?

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. SCHERLE. Mr. Speaker, a child asks: "Where is daddy?" A mother asks: "How is my son?" A wife asks: "Is my husband alive or dead?"

Communist North Vietnam is sadistically practicing spiritual and mental genocide on over 1,500 American prisoners of war and their families.

How long?

ACTION NEEDED TO PREVENT AIRCRAFT HIJACKING

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. RODINO. Mr. Speaker, we have all been shocked by the recent piracy and destruction of four planes in the Middle East last week. Fortunately, most of the passengers are now safe, but for a considerable time their lives were in jeopardy and the fate of the remaining 55 hostages is yet unknown. It is imperative that we take all feasible action to halt the senseless hijackings that are increasingly endangering air travel. I was heartened to note that the President has ordered sky marshals to travel on our international flights and the expanded use of antihijacking detection equipment at airports. These actions are similar to those I am recommending in legislation to be introduced this week. However, international action is essential to solve this problem, and I continue to urge that the President seek international agreements to impose sanctions against countries which shelter individuals or organizations that perpetrate armed attacks and seizures of aircraft. I was very pleased to note that the two fine daily newspapers in my home city of Newark, the Star-Ledger and the Newark Sunday News, both recently published editorials calling for strong action to meet the hijacking situation. For the information of my colleagues, I include the Star-Ledger editorial of September 12 and the Sunday News editorial of September 13 in the RECORD at this point:

[From the Star Ledger, Sept. 12, 1970]

SKY MARSHALS

The President's decision to have armed security guards on U.S. international flights is an unfortunate but necessary move. It is an action that has been forced by the wave of unspeakable aerial piracies by Arab terrorists who have seized 280 passengers and are holding them hostages.

The ordeal of the passengers on the four planes hijacked by Arab guerrillas underscores the urgency of taking counter-measures to forestall similar incidents in the future. The fanatical air pirates have been buoyed by their past successes; their criminal acts have demonstrated the political profitability of hijacking.

The latest hijackings have raised serious doubts that abject submission constitutes the most practical way of assuring safety of passengers. In the five hijackings pulled off the past week, the criminals were thwarted in only one instance, when the crew and security guards aboard an El Al Israel 707 resisted, killing one Arab commando and seizing another.

As it turned out, the passengers on the El Al plane fared much better than those on the other hijacked airliner because of the heroic action in fighting off the guerrillas.

Supine surrender no longer makes sense in these political aerial piracies: non-resistance was prudent in previous hijackings where planes were forced to land in countries governed by international law. They were permitted to depart with passengers and crew; this has not been the modus operandi in the four political hijackings pulled

off by Arab terrorists, who are using the hostages as pawns to barter for the release of guerrillas held by Israel.

The use of highly-trained "sky marshals" to protect American citizens and property in the airways is completely justified by the circumstances. It has been done by the Israeli government with considerable success, and there is no reason why the U.S. should not take these security measures. Unarmed planes on certain international flights are easy prey for terrorists; in fact, they encourage these fanatics to continue this political blackmail.

Sanctions also should be imposed against Arab nations, boycotting international flights to these countries until firm assurances have been given that these potentially murderous acts will be halted. These Palestinian extremists could not hijack airliners without the covert connivance of Arab governments, who are in a position to curb these incidents if they chose to act with firmness.

[From the Newark Sunday News, Sept. 13, 1970]

COMBATING PIRACY

President Nixon's decision to place armed guards on American planes is a welcome step toward combating the heinous air piracy that imperils the lives of innocent travelers and strikes at an important foundation of world order.

The presence of federal grants on international flights and some domestic runs will not of itself eliminate the threat of hijackings, whether by members of extremist groups or by demented individuals. But it will at least serve as a deterrent and as a means of thwarting hijacking attempts once under way.

While the potential dangers of a gun battle aboard an aircraft cannot be minimized, they clearly are outweighed by the risks of continuing to allow air pirates to operate unimpeded. Moreover, the White House has provided assurances that only "very sophisticated, highly trained, mature men" will be assigned security duty, thus reducing the chance of a midair disaster.

Nevertheless, apprehension of would-be hijackers before they are able to board planes remains the ideal course, and to this end President Nixon has ordered expanded use of electronic detection devices at airports. Both the Federal Aviation Administration and the Air Transport Association—the organization of the nation's scheduled carriers—contend that such equipment has contributed to a marked drop this year in the frequency of hijackings in the United States. In combination with extensive baggage checks and efforts to detect behavioral traits often exhibited by hijackers, the additional equipment should prove an important asset in the future.

Yet, for all the obvious advantages of armed guards and electronic surveillance, they are essentially national, and therefore limited, remedies for an international malady. Only when the nations of the world are prepared to band together in an air boycott of those countries that harbor and encourage terrorists will there be any chance of striking at the heart of the menace.

In recognition of this fact, the President has called for such a boycott and also has urged implementation of an international treaty providing for the punishment or extradition of hijackers.

This long-overdue measure, endorsed by the International Civil Aviation Organization last June but sidetracked by opposition from Arab countries, has the firm support of the Air Transport Association.

As events of the past week vividly have demonstrated, it is high time that it become operative and that nations refusing to subscribe to it be ostracized from the international aviation community.

B. & W. PLANT TOWNS

HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. BROOMFIELD. Mr. Speaker, it has become increasingly apparent to me that the future of America lies neither in its cities nor on its farms, but in the imaginatively planned and financially secure communities located between them.

One such community is Rochester, Mich. I think Rochester will prove a model after which more and more of our suburbs will be patterned.

Generator magazine, a publication of Babcock and Wilcox Co., has included in their issue for July and August a fine description of Rochester. I insert at this point in the RECORD their excellent article.

TWELFTH IN A SERIES ON B&W PLANT TOWNS

To the men and women of our Automated Machine division's Detroit Broach & Machine unit, Rochester, Mich., is an exciting place to work and a pleasant place to live.

The people of Detroit Broach supply three principal products—broaches, broaching machines and tracer lathes—to many important industries, and our people feel it's satisfying to be part of the growing, dynamic machine tool industry.

The Rochester people boast that they live in an attractive residential community, close to two spheres of recreation—the sophisticated culture, music and theater of Detroit and the hunting, fishing and boating of the Upper Michigan Peninsula. Rochester, located on M–150 in the heart of the Bloomfield Hills, is only 45 minutes drive north of downtown Detroit, and several hours drive to the five-mile Mackinac suspension bridge across the Straits of Mackinac to the sportland of the Northern Peninsula. Closer to Rochester, in Oakland County, there are more than 200 lakes.

The first permanent settlement in Oakland County was made at the present site of Rochester in 1817. The first settler, James Graham, became familiar with the Indian language and often served as an interpreter. There were several families of Chippewa Indians in the area and they helped clear the land and worked the farm land for the white settlers.

Most of the settlers came from western New York state, and the settlement was named after Rochester, N.Y.

The village remained under the general government of the township of Avon until 1869 when it became an incorporated village. It became a city in 1967.

Several industries settled in Rochester around the mid-1800's, and the Detroit United Electric Railway was built through Rochester in 1898. The electric railroad gave fast passenger and freight service to Detroit. One of the railway's steam generators provided electricity for homes and stores in Rochester from 6 a.m. to 12 midnight on weekdays and until 1 a.m. on Saturdays and Sundays. This system was purchased by the Detroit Edison Company in 1922 and is still serving the area.

Although generally considered a residential community, Rochester has in its area such industries as Parke-Davis Experimental Farms, National Twist Drill and Tool Company, the Detroit Broach and Machine unit of B&W and Control Data Corporation. And the nationally known home of the Leader Dogs for the Blind is in Rochester.

Gustav von Reis founded the Detroit Broach and Machine Company in 1934. The company became widely known in the machine tool industry, and was acquired by B&W in 1966. Together with W. F. & John Barnes of Rockford, Ill., and Century Detroit it forms the Automated Machine division.

The Rochester Community Schools comprise nine elementary schools, two junior and two senior high schools. More than 25 churches of various denominations serve the spiritual needs of the 7,000 residents.

VETERINARY MEDICINE'S CONTRIBUTIONS TO OUR HEALTH

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. ROGERS of Florida. The United States today is undergoing a health services crisis. The present health care delivery systems are expensive and frequently inadequate. Too little is being done to prevent illness. A tremendous health manpower shortage is mounting with no visible end in sight, unless the Nation redirects its budgetary priorities.

Total shortages of allied health professionals, nurses, doctors, dentists, pharmacists, optometrists, podiatrists, and veterinarians have been estimated by the Public Health Service at a level of almost 500,000. The total budget request for health manpower for 1971 is $242,234,000—approximately one-half of the congressional authorization of $417,500,000.

It is estimated that the Nation presently needs 36,000 veterinarians. We have only 26,000—a shortage of at least 10,000 veterinarians in the United States.

The veterinary medical capability of the Nation must be expanded to meet current and near-future demands for services. Conservative estimates indicate the need for 40,000 to 45,000 veterinarians in the United States by 1980. Obtaining that number and maintaining it will require twice as many new veterinarians, each year, as are currently graduated.

Veterinary medicine, with its 26,000 professionally active veterinarians, is one of our major health professions. Its contributions to man's health and well-being include helping to assure an adequate supply of food of animal origin; evaluating and reducing the hazards of environmental pollution; assuring safe, wholesome food; developing of medical care techniques and methods; and controlling infectious diseases.

Veterinary medicine is a vital force in the maintenance and improvement of the health of man. To meet the future need for veterinarians, we will have to make marked increases in the enrollment in the present colleges of veteri-

nary medicine and establish several new ones. Continued Federal assistance to the colleges of veterinary medicine is important in assuring an adequate and effective health manpower capability.

Mr. Speaker, I now insert in the RECORD two letters from two distinguished leaders in the veterinarian profession, Dr. Erskine V. Morse, past dean of Purdue University School of Veterinary Science and Medicine and present professor of Veterinary Medicine and Environmental Health, and Dr. Frank A. Todd, Washington representative of the American Veterinary Medical Association. These gentlemen have done an excellent job in promoting the cause for veterinary medicine and in pointing out many of the scientific activities in which veterinarians are playing an important part. The letters are as follows:

AUGUST 27, 1970.

Hon. PAUL G. ROGERS,
Rayburn Office Building,
U.S. Congress,
Washington, D.C.

MY DEAR CONGRESSMAN ROGERS: Your interest in, appreciation for and support of the veterinary profession are well recognized. Veterinarians are making contributions in two current nationally significant areas—environmental health and preventive medicine. Awareness of our impending environmental crisis is receiving worldwide attention and concern. Your own dedicated support in the Congress of environmental health and preventive medicine needs to the benefit of all of our people is a matter of record.

The re-emergence of cholera (Russia and the Middle East), diphtheria (Texas), and bubonic plague (New Mexico) presents grave problems. The resurgence of these disease antiquities stresses that we cannot be complacent where preventive medicine is concerned. In the past veterinary expertise has been involved with and contributed to public health knowledge involving these three scourges.

The Doctor of Veterinary Medicine (DVM or VMD) is a required and significant member of the health sciences team in teaching, research, and public service. By 1980 we anticipate a shortage of at least 6500 DVM's. Past experience and projected estimates indicate that the U.S. should have approximately 17.5 veterinarians per 100,000 population. We can meet this goal only if adequate federal support to veterinary medical education is continued. The assistance provided under "Title VII, Health Manpower Act of 1968" initiated many needed and beneficial programs. Since contributions of the profession have been acknowledged as a part of the total medical sciences effort, veterinary medicine should be included in forthcoming legislation relating to Medical Education Assistance.

I have taken the liberty of presenting documentation and statements delineating the past and possible future responsibilities and contributions of veterinarians in solving our nation's problems in environmental health and preventive medicine:

ENVIRONMENTAL HEALTH

The current environmental crisis will not diminish nor "go away" due to wishful thinking. The situation is of man's own making and irresponsible past and continuing actions. A basic behavioral pattern practiced among the lower animals, and largely ignored by man, is expressed as an admonition in the old cliche: "Don't foul your own nest or den!" The total environment—land, streams, lakes, oceans, and air—represents the "den or nest" of the human race. We have approached the brink of pollution due to the world's population explosion with its accompanying food shortage, consumer demands and trash surpluses. Worst of all, we do not know the true state and impact of all the implied and actual consequences which we read and hear about daily in all news media. The recent "nerve gas" fiasco emphasizes the extent of our utter confusion and widening credibility gap. Obviously, damage was done; but where? what? and how much? These questions will no doubt remain eternally unanswered. One fact *is* crystal clear: We *cannot* continue the past complacency nor afford the luxury of our questionable and irresponsible disposal systems in an already overburdened environment.

Environmental studies represent a great opportunity for a broad, truly interdisciplinary approach or meeting ground of medical, biological, agricultural and social scientists. Veterinary scientists are currently active in many key phases of animal waste disposal; air pollution; pesticide, herbicide, and drug toxicity; water pollution; noise abatement, and aquatic animal health. Veterinarians can play focal and pivotal roles in bridging gaps in comparative medicine, ecology and toxicology. The Doctor of Veterinary Medicine, by his educational background, training and experience, is qualified and skilled in tackling matters relating to both medicine and agriculture. The problems are not simple, for they may involve insect vectors, wildlife, livestock, pet animals, aquatic creatures as well as man. We have many challenges and opportunities to change or alter the course of our impending environmental crisis. Veterinary medicine is obtaining, and will continue to find, solutions while working individually and cooperatively with other scientists. The need is apparent and the challenges multiply each day!

Americans are meat eaters; our individual consumption averages 238 pounds per year. The total number of U.S. cattle has been increasing at about twice that of our human population. Livestock and poultry manure, once valued as fertilizers, now present a horrendous waste disposal problem of nearly 2 billion tons per year. The magnitude of this waste is clear when we consider that: wastes from 5 million feedlot cattle represent equivalents from 50 million people; 7 million dairy cattle equate to 105 million persons, 10 million hogs represent 10 million human beings, and 100 million laying hens produce wastes equal to that of 10 million people. One feed lot containing 50,000 cattle, and there are such operations, has a waste disposal problem equal to that of a city of 600,000 population. The gigantic 3000–8000 head feedlots and the million bird poultry production units accentuate the problem by concentration of manure wastes in extremely small areas. The resultant soil, water, and air pollution are no secret to even an urbanite. Re-cycling wastes, i.e., to cropland and pastures and refeeding are possible answers. Protein-rich poultry waste can be processed and fed to swine, cattle, and poultry. Any method must be checked and evaluated to protect human and animal health, control insect pests and vectors and to ascertain suitable ecological, physiological, nutritional, and toxicological parameters.

Therapeutic and growth stimulatory feed additives as well as herbicides or pesticides in forage may be passed in the feces and urine of livestock. Some of these chemicals or their metabolic degradation products may contaminate soil and potable water supplies. Proper treatment of animal or human wastes is imperative to prevent the spread of various enteric disease agents: enteric viruses, salmonella, leptospirae, hepatitis virus, etc.

Aquatic animal health is a developing area in veterinary medicine. Activities relate to the protection of human health, husbandry and care of water fauna, as well as the use of aquatic animals as models to study normal physiology, disease processes, behavioral patterns and underwater communication. We are becoming ever dependent on the seas for protein-rich food; this reservoir will be tapped more and more to feed the hungry of the world. The aquatic environment must receive protection and not be rendered next to useless by man's pollution.

The monitoring of various environmental pollutants can be accomplished utilizing fish, birds, and animals. It has been found that city pigeons' feathers contain more lead than those of their rural cousins. Evidences of fluoride, lead, and arsenic poisonings are found in livestock near smelting operations. High concentrations of mercury and DDT have been found in fish and shellfishes raised in industrially and agriculturally contaminated waters. Dogs, cats, rats, mice, squirrels, sparrows and pigeons might well be studied as monitors for and predictors of many common urban pollutants. We can well utilize animals in our pollution surveillance systems in both the city and farm. A smog in Smithfield, England, in 1873 affected one-third of the cattle at a livestock exhibition. Many animals were slaughtered to salvage their meat. In 1952 a similar incident occurred at Smithfield. Fortunately, public health investigators looked into the occurrence and found the causal relationship between both the cattle deaths and the demise of over 4,000 people during that seven-day smog. In October 1958, the Donora, Pennsylvania, community suffered a smog episode. Fifteen percent of the dogs was affected and one-fourth of the group died. The role and value of the canary to coal miners in monitoring poisonous mine gases is classic. We do not know enough about the effects of air pollution on cancer, respiratory, circulatory or eye disease in man and animals.

Pollens, dust, fungal spores and other particulate matter are a part of the atmosphere we breathe. Allergic reactions in man are debilitating and costly to the sufferer. Agricultural and industrial activities contribute to this problem. Particulate fallout in cities may reach 50 to 100 tons per square mile monthly. Assessment of the long-term effects on human and animal health should be thoroughly investigated.

Understanding the many facets of ecology draw upon veterinary expertise. For example, during the growth of apparently innocuous molds and fungi on cereal grains, metabolite products are produced which are toxic to livestock and man. These are called mycotoxins, and they are quite heat resistant.

The current corn blight has destroyed a portion of our corn crop—estimates of 5–25 percent are reported. The 1969 grain crop, now in storage, will be used more extensively in human and animal foods. Improper grain storage may lead to extensive mold growth. Whether or not we will find more mycotoxicosis in livestock during 1970–71 due to this chain of ecologic events remains to be seen. Veterinary researchers have studied the mycotoxicoses extensively.

Sounds can be very pleasant or annoying as we well know. The quality, intensity, or interval of noise produces hormonal changes in animals. Performance, behavioral patterns and general health may be affected. We do not know the impact of sound on existing diseases or the role of noise as inciting factor for future maladies. Noise, as a stress, may influence the development or course of cancer, physiologic diseases, or even infectious processes. Studies involving livestock, wildlife, and pets which embrace the basic sciences of veterinary medicine may yield significant answers.

Many poisons have a cumulative or additive effect. The body tends to retain and build up concentrations of the compound. The toxic effect is, therefore, chronic. Consideration should be given to combinations of disease causes and environmental stresses and pollutants, i.e., mycotoxins and cancer or

vitamin deficiencies; air pollution and respiratory or circulatory ailments; acute and chronic infections combined with noise; sublethal levels of metal or organic poisonings and cancer or deficiency diseases, etc. The possible combinations are limitless; the paucity of knowledge is very apparent and must be of real concern.

Veterinarians are becoming active and are direly needed on the environmental health team. They have already made important contributions to our knowledge of toxicology, pathologic physiology, and the broad areas of public health. More veterinary manpower will be required in teaching, research and public service during the next decade. An interdisciplinary environmental health team approach, which will include veterinary expertise, is required if we are to solve the pressing problems confronting us in industry, agriculture and medicine.

PREVENTIVE MEDICINE

The health and well being of both man and food-producing animals during this and the next decade will be determined in a major degree by the judicious application and practice of the broad concepts of preventive medicine. There are nearly 25,000 veterinarians in the U.S. Over one third of these professionals are private practitioners who minister to and protect our $34 billion livestock and poultry industries. The USDA has approximately 2500 veterinary employees, while state and local regulatory and disease control veterinarians number 1250. Their efforts are directed towards preventing diseases, which threaten our food supply. Yet with all the dedication of these disease prevention specialists we are still incurring a 15–20 percent loss in total livestock production due to disease. Preventive medicine is costly to the industry and the consumer. However, "living with a malady" is even more economically unsound and devastating should the infection flare up in epidemic proportions. Eradication or elimination of a given disease has proven the best long range course of action. Such has been well demonstrated and proven as in the cases of foot and mouth disease, bovine contagious pleuropneumonia, cattle tick fever, and vesicular exanthema in swine. Stringent national and state cooperative programs in regulatory veterinary medicine are moving towards eradication of bovine tuberculosis, brucellosis, hog cholera, screw worms of cattle, and pullorum disease in fowl. Regulatory veterinary medicine is in reality preventive medicine. The first aim is *control*, while the ultimate goal is *elimination* of disease.

As our livestock production units become larger (5,000 beef cattle or pigs on feedlots and up to 50,000 laying hens or broilers in a single house), infectious agents will have maximal opportunity to wipe out entire herds or flocks in *days—not weeks*. Even the most efficacious treatments will be of little immediate value in preventing the spread of an agent in populations numbering thousands. Recently, "bootlegged" turkey blood, contaminated with Newcastle disease virus, was used to "vaccinate" chickens for Marek's disease. Some 100,000 birds were directly involved with a potential threat to many more; death loss due to the contaminating virus was 100 percent. Properly regulated and controlled movement of vaccines and biologicals is a definite statutory responsibility of regulatory veterinary medicine.

Veterinary research is classically directed toward prevention of disease through studies involving accurate diagnosis, transmission patterns, common hosts, wild-life reservoirs as well as insect vectors. Immunization or vaccination to protect animals against a given agent receives special emphasis. If these basic facts are not known and established, treatment may be a superfluous, and even a bit late to control or prevent future outbreaks.

Prevention of the over 200 zoonoses, i.e., those animal diseases transmissable to man, is imperative. Livestock, companion animals, or pets as well as wildlife serve as reservoirs or infection sources. Rabies is well known to the layman. The role of the dog in the infection-chain is common knowledge; cattle and swine also make their contribution in the spread of the disease. Both insectivorous and frugivorous bats disseminate rabies to susceptible hosts *via* their urine. The most significant and uncontrollable reservoirs, however, are our wild animals—foxes, raccoons, skunks, etc. Tuberculosis, leptospirosis, brucellosis, fungal infections, tularemia, botulism, ornithosis, trichinosis, protozoan parasites and tapeworm infections all have received veterinary research attention to the benefit of preventing transmission to man.

The inspection of meat, dairy and poultry products by 2600 veterinarians of the USDA, FDA, U.S. Air Force, and U.S. Army is well documented, and yet sometimes overlooked as a contribution to preventive medicine. The application of veterinary knowledge through monitoring and inspection protects consumers' health against agents of disease, toxic materials, and noxious adulterants. This activity is purely and simply preventive medicine to the benefit of the American consumer.

Cornerstones in the history of preventive medicine are the result of the studies utilizing animals and their diseases as models. A few of the major contributions of the past have been:

Jenner's discovery in 1796, that attacks of "milker's nodules" produced immunity to human small pox.

Zinkle's finding (1804) that sputum of rabid dogs transmitted rabies to susceptible hosts.

Koch's experiments (1876) with anthrax which established bacteria could cause disease.

Pasteur (1880) produced the *first* successful bacterial vaccine. It protected sheep against anthrax.

Bollinger's (1877) demonstration that fungi could be infectious agents; his studies with lumpy jaw of cattle established this fact.

Griffith Evans in 1880 demonstrated that protozoa were capable of infecting higher animals. Surra of horses and camels served as an example.

Veterinarians, through their own researchers and investigative efforts, have added materially to our progress in preventive medicine. A few examples are:

1. Benesch developed spinal anaesthesia.

2. Tabourin devised the hypodermic (needle) injection technique.

3. Ramon formulated immunizing techniques with his toxoids—particularly those of tetanus and diphtheria.

4. Chauveau catheterized the living horse's heart and paved the way for the successful use of the technique in human surgery.

5. Schofield recognized the anti-coagulant properties of dicumarol while studying "sweet clover disease of cattle." The discovery has prolonged life of heart disease patients and prevented heart attacks. Dicumarol is also the active ingredient in the "rat poison", WARFARIN.

6. K. F. Meyer was instrumental in solving many of the problems of botulism, a deadly poison, to the benefit and success of the American canning industry.

7. T. N. Spencer advanced the hypothesis that canine "black tongue" and human pellagra had the same cause. Elvehjem, a biochemist, proved him to be correct. The disease is due to a niacin deficiency and can be prevented.

8. Maurice Hall discovered the value of tetrachloroethylene in the treatment of canine hookworms. Other researchers found the drug efficacious in treating and controlling human hookworm.

9. Alfred E. Earl found that reserpine had tranquilizing effects in laboratory animals. He thus laid the basis of studies on tranquilizers in animals and man.

Over one half of the U.S. veterinary profession, either directly or indirectly contributes to human health and preventive medicine through their activities in livestock practice, regulatory disease control, food inspection, and research. We do not have enough veterinarians to staff adequately the current consumer protection programs.

Thank you, Congressman Rogers, for your assistance in the furtherance of modern veterinary medical education. The support and understanding which you and your congressional colleagues give our profession will also materially strengthen the nation's total endeavors and programs in environmental health and preventive medicine.

Sincerely yours,

ERSKINE V. MORSE, D.V.M., Ph. D.,
Dean, Purdue University School of Veterinary Science and Medicine.

SEPTEMBER 8, 1970.

HON. PAUL G. ROGERS,
U.S. House of Representatives,
Washington, D.C.

DEAR REPRESENTATIVE ROGERS: The following will provide information on the relationship and growing role of the veterinary medical scientists, teachers and professionals in the discovery and application of the facts of living processes in man's health and disease.

More and more, bits and pieces of information that together form the mosaic of our medical knowledge are being acquired from all forms of life, including plants, and all members of the animal kingdom, encompassing the simplest forms to the most complex. The lines of demarcation are once again dissolving into a single, continuous stream of one medicine, as was expressed by such medical greats as the pathologist Virchow, in the late 19th century. The M.D., who is trained in all of medicine concerning man, and the DVM–VMD, who is trained in all medicine involving animals other than man, together form a melding of the sciences and the practice of one medicine today. This is increasingly apparent through the participation and involvement of the veterinary-medically trained practitioners, scientists, and teachers in the human medical communities throughout this country.

Veterinary medical graduates are serving in judging the scientific validity of medical research proposals and training proposals supported by granting agencies of our government. They are collaborating as scientists and co-investigators with human physicians in the study of health and disease, as it relates to problems in man. They, further, are serving as faculty members, in teaching the comparative aspects of biology and medicine to students and graduates of human medicine, to broaden the base of the latters' experience and insight into life's processes.

Veterinary medical graduates are developing and collaborating in the development of clinical procedures, equally useful in the diagnosis of diseases in man, as well as other animals, and the development of instruments and devices (such as Stader splints), with direct applicability to man's service and well-being.

Because of their knowledge in comparative biomedicine (biology and medicine), the veterinary medical doctor is providing leadership and guidance to the growing number of medical scientists who are seeking to solve questions of vital importance to human medicine with animal subjects in laboratory surroundings. This is a logical and effective area of contribution wherever trained veterinary medical scientists can perform.

Dr. Dorland Davis, M.D., Director, National Institute of Allergy and Infectious Diseases, has made the following statement:

"Recent experience has demonstrated that the basic qualifications and training of veterinarians equip them to assume broader roles in research administration, and in the management of broadly-based health activities. In the past, these functions usually have been discharged by physicians. In the future, the expected shortage of physicians available for research administration and public health practice will, probably, become more acute, and provide more opportunities for other individuals trained in the problems of veterinary disease.

"Veterinary training in microbiology and in pathology, for the scientific understanding of broad health problems and responsibilities for conduct of investigations. In recent years, more and more positions of scientific management are being occupied by veterinarians, and it is almost certain that this trend will accelerate. Veterinarians in the Department, therefore, should be oriented to biomedical investigations and their application on a broad scale to national health needs."

As you know, Congressman Rogers, this nation's veterinary schools were finally included, along with other medical schools, in Federal legislation to provide grants, first for construction and, in 1968, for educational improvement. This achievement represented the culmination of a long struggle to obtain appropriate treatment of veterinary medicine as a medical profession, with direct interest in, and concern for, human health.

An obvious benefit for the public, from further supporting education and development of veterinary medicine, lies specifically in nutrition. An adequate diet is a basic factor in good health.

Undernourishment, in general, refers to an inadequate intake of energy, i.e., calories, while malnutrition may result from many and varied nutritional imbalances or deficiencies. The most important, by far, however, is protein malnutrition.

Protein deficiency particularly affects young children and pregnant and lactating mothers. An important consequence of protein deficiency is the impairment of the health, vigor, and efficiency of future generations.

The nutritive value of dietary protein depends as much on its quality as the total amount present. The prime sources of the best proteins, those having the highest biological values, are foods of animal origin, i.e., meat, milk and egg products. Animal products are, also, rich in other essential nutrients.

The veterinarian is an important protector of that portion of our food supply that comes from animals. While the United States has only 6% of the world's population, it consumes 29% of the world's meat. Many factors enter into the reason for this abundance of animal and poultry products.

One of its traditional and highly valued functions of veterinary medicine is its service to animal agricultural in protecting the health and productivity of food-producing herds and flocks, an over $50 billion industry. The American housewife is provided with an abundant, wholesome and economical supply of meat, milk and eggs, probably unmatched by any other country in the world.

There is a shortage of veterinarians—not just for private practice—important though this is to the immediate health of our food-producing animals—but a shortage, also, in education, research, livestock disease control, and public health.

With the current great need for improved health services for the citizens of this country, it is necessary to utilize all of the health personnel available. It is recognized that there is a shortage of such personnel and that measures must be taken to increase our capability for the training of these individuals.

Trusting this information will be of assistance to you in your continued interest in the nation's health problems, I am

Sincerely,

FRANK A. TODD, D.V.M.,
Washington Representative, American Veterinary Medical Association.

REFORMING THE REGULATORS

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. ROSENTHAL. Mr. Speaker, on August 11, 1970 Philip Elman, Federal Trade Commissioner, gave the following paper before the American Bar Association, Antitrust Section, St. Louis, Mo. This paper entitled "The Regulatory Process: A Personal View," makes a very convincing case for the "radical structural reform," of our independent regulatory agencies.

Without a doubt, Mr. Elman states:

The theory underlying the independent regulatory commission was original and brilliant. . . . It is almost a century, however, since the Interstate Commerce Commission, the grandfather of the federal agencies, was created in 1887. We must now look to experience more than theory.

Elman attributes the chronic unresponsive and basic deficiencies in agency performance, to outmoded structure. This structure must be reformed, these agencies must be made more visible to the public, and more responsive to the public interest. It is time, he says, to examine these agencies, and adapt them to "changing social and economic conditions."

The points Commissioner Elman makes are well worth our consideration.

The text of the paper follows:

THE REGULATORY PROCESS: A PERSONAL VIEW

(By Philip Elman, Federal Trade Commissioner)

I appreciate very much your invitation, as I leave government service after more than 31 years, to express a personal view of the regulatory process, particularly in relation to the agency I know best—the Federal Trade Commission.

I came to the Commission in 1961 with the strong encouragement of Justice Frankfurter, who during our long friendship had instilled in me his profound faith in the administrative process. Indeed, no one ever came to an agency more convinced that the independent regulatory commission had an essential and important place in government; that its theory and structure were basically sound; and that, while reforms were necessary, they could be achieved simply with better men and better management. I went to law school in the late 1930's, when the New Deal agencies were in full flower. I learned about administrative law from such men as James M. Landis and Calvert Magruder, as well as Felix Frankfurter. As a government career lawyer, my work brought me in close contact with the federal agencies. In the Solicitor General's Office, where I spent 16 years, I argued or briefed hundreds of cases defending government agencies before the Supreme Court.

Thus, it was not unnatural that the only "instructions" I should receive when I was appointed to the FTC were that President Kennedy expected me to be "the lawyer" on the Commission. To others this might have seemed rather vague; but I knew precisely what was meant, and never forgot it. For, as I said in my first speech as a Commissioner, "Lawyers are supposed to be experts in the administration of law, experts in the art of getting things done and in ways that are fair and just. And lawyers in government, especially, become inescapably involved in that most challenging process: the attainment of justice through legal institutions administered by men".

I have burdened you with this long preface so that you will know that the view of the regulatory process which I express is that of a friendly critic-in-residence, whose perspective has perhaps been distorted by being too close to the scene.

Today, when all institutions of government are being found wanting, none has been more criticized and less responsive to such criticism—than the independent regulatory commission. With monotonous regularity, studies and reports appear in an unending procession, all saying essentially the same things. While the criticisms cover a very broad ground, the most fundamental deficiency has been found to be the agencies' chronic failure to fulfill their unique quasi-legislative function of developing and implementing regulatory policies responsive to public needs and the public interest. With each new study and report, there is the same ritual call for better appointments and improved administration. Yet the agencies go on essentially unchanged and seemingly undisturbed, with little evidence of basic improvement in performance.

Without a doubt, the theory underlying the independent regulatory commission was original and brilliant. It emphasized the agency's independence; its ability to bring expert judgment to bear upon technical and complex economic issues; its insulation from political partisan control; its capacity to provide both continuity and flexibility of policy; and its blending in a single tribunal of a wide range of powers and functions, from general rule-making to case-by-case adjudication, permitting the agency to exercise broad discretion in choosing the best tool for dealing with a particular problem.

It is almost a century, however, since the Interstate Commerce Commission, the grandfather of the federal agencies, was created in 1887. We must now look to experience more than theory. And, like Louis Hector and Newton Minow before me, I have come to the view that the chronic unresponsiveness and basic deficiencies in agency performance are largely rooted in its organic structure and will not be cured by minor or transient personnel or procedural improvements.

Experience shows, I believe, that the independent multimember regulatory commission suffers from the defects of its virtues. Independence, collective deliberation and decisionmaking, and fusion of powers and functions in a single agency, are all useful values in the administrative process; but we have pushed them too far, relying too much on the pure simplicities of the original theory and neglecting the lessons of actual experience. It is time for radical structural reform.

II.

At the outset, let me make a preliminary general observation. The public suffers from too much of the wrong kind of regulation. Broadly speaking, government regulation is necessary and justified only when it serves the *public* interest, not the special interests of private groups or industries. While the lines of demarcation are not always sharp and clear, we should recognize that preservation of the environment, and protection of the health and safety and other essential interests of the public, are proper objectives

of government regulation; shielding businessmen from the risks of competition and the marketplace is not. So-called "infant" industries may perhaps need a helping hand from government for a short time; but we should not go on sheltering and subsidizing them forever in the guise of protective regulation. The present transportation mess is an obvious example of what results from misguided regulation. Regulatory institutions should not be allowed to develop permanent lives of their own, impervious to changing conditions and needs. Existing and proposed regulatory programs should constantly be reexamined, and, to the maximum extent possible, competition should be established and maintained as our national economic policy—in fact as well as in rhetoric.

Another basic point which seems to have been disregarded is that the regulatory agencies were created in order to redress those injuries to the public which can best be remedied by administrative action. Where only private interests are aggrieved, the proper remedy is private action in the courts. A tort, whether the victim is a competitor or a consumer, is a private, not a public, wrong—and the place to seek relief is a court, not a regulatory agency. To be sure, there may be disadvantaged individuals or groups who will need—at least for a time—some kind of government help in securing effective access to the courts. But this does not justify the transformation of regulatory agencies into courts. Just as the administrative process should not be used to insulate businessmen from the rigors of a free-enterprise economy, it should not be used to relieve the courts of their duty to redress violations of private rights.

III.

Thus, there is much room for reducing the areas of agency regulation, thereby encouraging greater reliance on free competition and on private self-help through traditional legal methods. Inevitably, however, there will remain many areas in our economic life where administrative regulation is required to serve essential public needs, and where there will be continuing need for federal regulatory agencies.

In creating these agencies, Congress recognized its own inability, through self-enforcing legislation, to prescribe specific and detailed rules and regulations for dealing with complex and dynamic economic conditions. The agencies were established as continuing administrative bodies designed to keep pace with the evolution of a growing and ever-changing economy. Each of these "arms" of Congress was given—as its primary and principal assignment—the duty of developing and executing a body of subsidiary regulatory policies within the broad limits provided by the governing statute.

The agencies were designed to supplement, not to duplicate, the work of the courts. It was contemplated that an agency would sit, not like a court, as a passive and disinterested arbiter of cases or controversies brought fortuitously before it, but, rather, as the surrogate of Congress, exercising delegated legislative power to regulate commerce and affirmatively advancing basic national policies and objectives declared by statute. To that end, each agency was equipped with a broad array of flexible administrative tools, permitting a comprehensive approach to regulatory problems in their full dimensions.

According to the theory, the independence of the regulatory commission would be a source of institutional strength, insulating its members from partisan political pressures and enabling them to act creatively and boldly. Its multi-member structure would insure that agency decisions would be reached after group deliberation, providing both a barrier to hasty or arbitrary action and assurance of judicious and prudent policies. And its flexibility and fusion of powers would assure that case-by-case adjudication would be used, not in the traditional manner of the courts for the purpose of applying established legal rules to particular cases, but rather for the primary administrative purpose of developing new, wise, and informed regulatory policies responsive to changing conditions and public needs.

In each of these basic respects, however, there is a wide gap between the theory and the fact of the regulatory process.

A.

In fact, independence and security of tenure for agency members have not achieved the intended result of insulating agencies from undesirable political pressures and special interest pleading. Of course, government regulators are—and should be—subjected to external pressures and influences. But we must distinguish between those that are improper or harmful to the public, and those that are not only legitimate but necessary and desirable. It is one thing for agency members to be responsive to narrow, partisan, political or special interests; it is quite another to be attentive to, and indeed welcome, the advocacy of consumer interests and public needs. Paradoxically, independence and security of tenure tend to encourage the former and to discourage the latter. In fact, they foster, on the one hand, agency passivity and a reluctance to "rock the boat" by antagonizing powerful special interest groups; and, on the other, an attitude of complacency and indifference to those larger public concerns for which there is as yet no effective "people's lobby".

Since agency members are appointed for long terms and cannot, for all practical purposes, be removed from office, the public cannot take effective action against the regulators directly. Nor, as matters stand now, does the public blame the President for poor agency appointments and continued agency failures. Despite such failures, the public can neither do anything to remedy the situation nor find anyone to hold accountable.

As long as I can remember, Presidents have said—and have been reminded by every new study and report—that revitalization of the agencies must begin by appointing better commissioners. Yet, as Kenneth Cox said the other day in commenting on the quality of agency appointments over the years, "I am appalled by the way Presidents generally have treated the agencies." While it is indeed appalling, it should not be surprising that this is the case, and will continue to be, no matter who is President.

So long as the agencies constitute a "fourth branch" of government for whose performance no one holds him accountable, a President is under little pressure either to seek out the best qualified men or to resist political influence. It would be instructive to compare the agency members appointed over, say, the last quarter of a century with the Assistant Secretaries (or Assistant Attorneys General) chosen during the same period. Both positions receive the same pay and, theoretically, enjoy the same status and prestige. In fact, however, the caliber of appointments to the two categories is vastly different, as are the criteria for selection.

A President knows that after an "independent" agency member is appointed, he is essentially on his own; and if he proves to be incompetent or unresponsive to the public interest, the President will usually not be held at fault. On the other hand, an incompetent Assistant Secretary reflects directly on the President, his Administration, and his standing with the public. Every President incurs political obligations. The "independence" of the regulatory agencies tempts a President to satisfy a political debt to a deserving friend or supporter by appointing him to a comfortable agency berth. It is no historical accident that President Roosevelt's decision to use the FTC, not as an instrumentality for advancing his New Deal programs but primarily for political patronage purposes, coincided with the Supreme Court's ringing declaration of agency independence in the 1935 *Humphreys* case.

Contrary to the original theory, independence is a source of institutional weakness, not strength, and tends to discourage creative and courageous regulation in the public interest. Independence means that an agency lacks a constituency, a power base, and the backing of the President. Without these, the agency will stand naked and alone when it takes controversial action impinging on powerful private interests—as the Federal Trade Commission discovered when it promulgated its Cigarette Labeling Rule in 1964. Independence nourishes institutional timidity and fear of those who may use their political or economic influence to take reprisal action against the agency, reducing its powers or cutting its appropriations.

Another consequence of carrying the concept of independence too far is that it impedes the development of comprehensive and harmonious national policies in such broad areas, for example, as transportation, communications, and trade regulation, where a single agency's responsibility covers only part of the field. In these areas we should not let the abstract notion of agency independence interfere with the President's constitutional power and duty to take care that the laws enacted by Congress are faithfully exectued; that the various agencies concerned do not neglect their statutory responsibilities; and that the specific regulatory policies followed by each of them are complementary and coordinated with basic national goals.

B.

Turning now to its multi-member structure, experience shows that this produces a dangerous depersonalization and invisibility of agency activity. When the public is only dimly aware of an agency as a distant and impersonal institutional entity, when one man cannot clearly be identified as responsible, who is there to hold accountable for the agency's shortcomings? Group deliberation and decision-making also engender unnecessary delay as well as indecisiveness, compromise, and the expedient of solving difficult and controversial problems by waiting for them to go away. As everyone with agency experience knows, its multi-member structure is a substantial and frustrating obstacle whenever swift and incisive regulatory action is required.

C.

Finally, as a device for developing regulatory policy, case-by-case adjudication of alleged violations of law has proved to be inefficient and ineffective, and, in many cases, unfair. Litigation is an excessively slow, expensive, clumsy, and inadequate process for resolving technical and complex economic issues. Yet, agencies like the Federal Trade Commission—staffed as they are by lawyers whose training and experience make them feel most comfortable with procedures drawn from the courts—continue to rely on adjudication as policy-making technique where other quasi-legislative methods, principally rule-making, are far more efficient, expeditious, and advantageous to the public.

On the basis of my own experience and observations, the strongest argument I would make against agency adjudication of alleged violations of law is that the blending of prosecutorial and adjudicative powers in a single tribunal imposes intolerable strains on fairness. The problem of avoiding prejudgment, in appearance or in fact, constantly hovers over all agency activity, and is troublesome to agency members in almost every kind of action it takes. It can arise in the most subtle as well as obvious forms.

Consider, for example, the so-called test case where the agency issues a complaint in order to establish a new legal principle or

remedy—precisely the "Rule in Shelley's Case" type of adjudication which agencies have been urged to undertake as an essential and proper method for developing new regulatory policies. Agency members frequently take an active part in the pre-complaint investigative and prosecutorial phases of these cases; and the complaint is usually issued with the knowledge that, because of the novelty and importance of the issue, it will be fully litigated and be back for adjudication on the record. When such a test case does come up on appeal to the agency members, while there is no bias or prejudgment of guilt in the classic sense, there is an inescapable predisposition in favor of the agency position, as set forth in the complaint. After all, the whole point of starting a test case is to let the case go forward into the reviewing courts, where the issues may be finally settled. To put it bluntly, once such a complaint is issued, one should ask for long odds before betting against issuance of a final order. While a test case may be and usually is vigorously contested, the result—at least in the agency phase—is likely to be a foregone conclusion.

Indeed, in such a case an agency member may vote for an order not because he is personally convinced that there is a violation of law but because he feels, perhaps in an excess of humility, that since it *is* a test case involving a doubtful or unsettled question of law, his duty is to find against the respondent so that the case may go on to the courts for definitive resolution. This Catch-22 process may reach full fruition when conscientious judges on the reviewing court affirm the agency ruling, whatever their own doubts about its merits, because they feel obliged to defer to the agency's expert judgment and discretion.

There are other institutional factors that intrude upon fair and impartial agency adjudication. Theoretically, when an agency member sits as a judge, his freedom to decide is the same as if he were on a court. But the judicial process is designed to insure that the judge is both neutral and disinterested, and has no interest other than that of applying the law fairly and evenhandedly. An agency member, on the other hand, cannot be unconcerned with whether the outcome of the case is to advance or to retard an important agency program to which substantial resources have been committed. Even the most conscientious regulator cannot, when he acts as judge, ignore the effect which the decision will have on the agency's regulatory policies and goals.

Moreover, an agency member cannot escape the implications of his leadership role in the agency. He may fear the effect on staff morale if he votes to dismiss the complaint or reject the agency position in an important case. He may prefer to see the onus of dismissal borne by a reviewing court. And an agency member, *qua* judge, may well be apprehensive that dismissal of a complaint will imply that he made an error in having voted, *qua* persecutor, to issue it.

In these respects and others I have not mentioned, the context of agency deliberation and decision-making differs markedly from court adjudication. But the solution is not to judicialize the administrative process further, or to seek the appointment of "better" commissioners who will make better agency judges. Agency members are not, and should not be selected for their judicial qualities; and the institutional environment in which they work does not nourish the development of such qualities. It should surprise no one that the agencies have not produced a Learned Hand or a Henry Friendly. Agency members should be chosen for their capacity to perform the essential regulatory task of developing policies that are wise, informed, enlightened, and in the public interest—and not for their judicial detachment and learning, or ability to write a polished legal opinion.

In short, agency members will become better regulators if we no longer expect them to act as judges as well as administrators. We should not require conscientious agency members to shoulder the irreconcilable burdens of both vigorously prosecuting and fairly judging in the same case. Those suspected of violating the law should indeed be proceeded against with vigor and dispatch; but the agency should prosecute its cases in an impartial and disinterested judicial tribunal. We should relieve agency members of the impossible duty of determining whether the allegations of their own complaint have been proved by the evidence in the record of a proceeding in which the agency itself is an adversary party.

IV.

Thus, while I have long held to the opposite view, I am now convinced that we will lose nothing, and gain much, by eliminating from agencies like the Federal Trade Commission the function of case-by-case adjudication of alleged violations of law. This function should be transferred either to the district courts or, preferably, to a new Trade Court which is decentralized and holds hearings in every state, thus bringing the judicial phase of the regulatory process much closer to the people. The Trade Court could be given jurisdiction not only of complaints prosecuted by the agency, but also private class-action suits brought by consumers and competitors injured by the same alleged unfair trade practices. To permit full and comprehensive disposition of the case by a single tribunal, the Court should have authority not only to issue preliminary and final injunctions, but also, where appropriate, to award damages, civil penalties, and other equitable relief.

Relieved of its adjudicative responsibilities, the agency's remaining functions should be vested in a single Commissioner serving at the pleasure of *both* the President and Congress, and removable by either (in the case of Congress, by a majority vote of both Houses). This would permit the public to hold both the President and Congress accountable for an agency's continued failures or poor performance.

I do not offer this proposal as a panacea for all agency ills. Nor do I suggest that it is without risks and dangers. On the positive side, however, elimination of the adjudicative function will enable an agency to concentrate its resources on a single central objective: the development and enforcement of regulatory policies carrying out the statutory mandate. To that end, it would conduct investigations and studies, utilizing fully its powers to gather information on emerging regulatory problems; it would make expanded use of its rule-making authority (including issuance of guides and enforcement statements) as the primary method for formulating policies and standards; it would proceed in court against persons charged with engaging in unlawful acts or practices, including those prohibited by valid agency rules or regulations; and it would advise the Congress and the President on any need for new legislation. All of these essential administrative tasks, executive and quasi-legislative in nature, are better performed, more quickly and more incisively, by a single administrator than by a multi-member tribunal.

Centralizing full authority and responsibility for an agency's activities in a single administrator will unquestionably facilitate the development and formulation of regulatory policy. It will also lighten the burden of fashioning comprehensive and coordinated national policies in those areas where other government agencies or departments have overlapping responsibilities.

Moreover, an agency should be no less independent, in the best sense of the term, because it is under the leadership of a single man. The agency should still be required to develop regulatory policies that are truly non-partisan and responsive to public and consumer needs, and not to those of special interest pleaders. By increasing its visibility and accountability to the public, the proposed change in structure should result in a far greater degree of agency responsiveness than now exists.

Admittedly, having only one man in charge may make it easier to exert political pressures on him, bad as well as good. I do not wish to overstate the case, but it seems clear that the present structure of the agencies has failed to insulate them from improper influences, while the proposed change at least offers the hope of increased responsiveness to consumer needs and the broad public interest. Nor do I see any reason why a policy-making government regulator should be appointed for a long term of years, and not be removable from office despite continued public dissatisfaction with his performance. Such a public official should be required to live dangerously in that respect. It cannot be repeated too often that visibility and accountability to the public are essential keys to good government. If Congress, the President, or the public is disappointed with an agency's performance, there should be one man upon whom attention can focus and from whom immediate improvement can be sought. We cannot do that with the independent regulatory commissions today; and both they and the public suffer from it.

With a single man given full authority and responsibility for an agency's activities, it should be easier to attract "better" men. A President will be more reluctant to appoint incompetent Commissioners, for their failure will be his failure; their incompetence will be his embarrassment; continuing them in office, despite poor performance, will be his responsibility.

We should make sure that an agency is not given more jobs than it can reasonably be expected to handle. If it is, we know from experience that the agency will concentrate on those which are easiest, least controversial, and yield the quickest results, putting aside those more difficult and complex tasks which may be more important to the public. Nor should we allow an agency to execuse its own failures by putting the blame on a parsimonious Congress. It makes no sense to assign a job to an agency and then withhold from it the necessary resources of money and manpower.

I think it would be a serious mistake to transfer the regulatory agencies to the large Executive Departments where they would disappear, like the Food and Drug Administration, submerged under massive layers of bureaucracy. Agencies should continue to be independent in that sense—so that they may be clearly visible, fully accountable, and unable to blame others for their own deficiencies.

I am not as fearful as I once was that transferring agency adjudication to the courts would create a competing organ of policy-making. If the proposed changes should result, as I believe they will, in far greater and more effective utilization by the agencies of their administrative powers—again I stress the tremendous potential of rulemaking as a practical and fair method for developing and articulating regulatory policy—, there will be little danger of judicial usurpation of the agencies' authority. Experience shows that where an agency is alert to its responsibilities, and is demonstrably endeavoring to fulfill its statutory duties in the public interest, reviewing courts generally give its actions the benefit of a reasonable doubt.

v.

It is perhaps unnecessary to say, in conclusion, that no reforms in the structure of the regulatory agencies will succeed unless there also are radical charges in the climate of government and the political processes. As John W. Gardner has said, "Our political and governmental processes have grown so unresponsive, so ill-designed for contemporary purposes, that they waste the taxpayers' money, mangle good programs, and smother every good man who comes into the system. * * * Sooner or later, someone is going to have to tackle the central structures of our society or it isn't going to work." We must institutionalize the means whereby the public may be aware of, and participate in, political and governmental processes that affect the quality of all our lives. We must open wide the doors and windows of government agencies, so that the public may see for itself what is or is not being done, and demand an accounting from those in charge.

Every institution of government must be renewed and adapted to changing social and economic conditions. It is no criticism of the administrative process, and the creative scholars and statesmen who have nourished its growth, to find that it is no longer adequate to the needs of the present and the future. The current widespread dissatisfaction with the performance of the regulatory agencies offers an opportunity for genuine reform. I leave you with the hope that this opportunity will not once again be allowed to slip by, without meaningful change and improvement.

"HIJACKING" THREATS IN WASHINGTON

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. RARICK. Mr. Speaker, many remember that a little over a year ago presidential aspirant George Wallace promised that if elected, he would protect the inhabitants of Washington even if necessary to place armed marines on every corner of the city.

Judging from the events of the past several days, it appears that President Nixon will need to station armed guards at every public accommodation room in Washington.

Such is the plight of our "hijacked" Nation's Capital.

I include several news clippings, as follows:

[From the Evening Star, Sept. 11, 1970]

HOLDUP IN THE MEN'S ROOM

(By Ned Scharff)

A man was seated in the sixth-floor men's room in a downtown office building yesterday when he heard a voice above him say, "Give me all of your money."

Morris C. Brinton, a 45-year-old patent draftsman, looked up and saw someone holding a pistol and peering at him from the space above the stall's partition, police said.

When Brinton refused the gunman's demand, the man shot him in the left leg and fled without money, police said.

Brinton was treated at George Washington University Hospital for the wound and released.

The attempted restroom holdup was the second of its kind in two weeks in the American Railroad Building, 1920 L St. NW.

Joe W. Grotegut, a public relations executive for the American Association of Railroads, said he thinks yesterday's restroom would-be robber may have been the same person who accosted him two weeks ago.

"No doubt about it," Grotegut said, "this man's approach sounds almost identical to that of the one who robbed me."

Grotegut said he entered the fourth-floor men's room Aug. 28 in the early afternoon.

"As soon as I sat down, I heard a voice coming from above me and when I looked up I saw a gun pointed at my head. The guy must have been standing on top of the stool in the next cabinet.

"It was a nerve-wracking experience," Grotegut said. "But as soon as the man asked me for my money, my watch and my rings, I realized that all I had was $14 and a watch.

"I'd read enough about these kinds of things to know that the simple, safe and wise thing to do was to give him everything I had. I guess if he'd asked me to write him a check I would have done that, too."

Herbert Blum, a partner of Swesnik and Blum, Inc., the firm which owns the building, placed much of the blame for the unique problem on his tenants.

"They haven't kept the bathroom doors locked, as they should have," he said, explaining that keys to the restrooms had been issued when the building opened in 1968. "But naturally the keys got lost and the people who work in the offices get lazy. The restrooms have almost never been locked."

Many people who work in the building were alarmed over yesterday's shooting and by the theft two weeks ago. Some have called for stepped-up security precautions, including full-time guards.

"This is becoming uncomfortable," said one. "Its getting so that you have to bend down and look under the doors for suspicious looking feet before you enter any of the johns."

The New York Times, whose Washington bureau occupies the building's top floor, is planning to change the locks on all its restrooms. In the meantime, however, many of the newspaper's employes joke nervously about the situation. One man told his secretary:

"I'm not afraid. I'm going to the bathroom, but if I'm not out in two minutes, send some one in after me."

[From the Washington Post, Sept. 12, 1970]

YOUTH ASSAULTS HILL SECRETARY

A congressional secretary was attacked and beaten in a women's restroom in the Rayburn House Office Building about 2:30 p.m. yesterday by a youth who climbed over a toilet stall, police said.

MAN'S INHUMANITY TO MAN—HOW LONG?

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 15, 1970

Mr. SCHERLE. Mr. Speaker, a child asks. "Where is daddy?" A mother asks. "How is my son?" A wife asks. "Is my husband alive or dead?"

Communist North Vietnam is sadistically practicing spiritual and mental genocide on over 1,500 American prisoners of war and their families.

How long?

WHO SPEAKS FOR THE AMERICAN STUDENT?

HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. WYMAN. Mr. Speaker, the troublemakers on American campuses are a small minority. Most students want to get an education and get on with their basic responsibilities of earning a living, raising a family, and becoming a useful member of society.

In a situation where a vast majority of students do not want to have their education interrupted, especially by a truculent, often irrational, violent minority, two basic requirements exist. One is that the educational institutions themselves promptly expel those who wilfully disrupt their proper educational operations. The second is that in some way those students who believe they are in school to get an education and not to start a "revolution," must have a reasonable amount of leverage in dealing with their contemporaries who are "making things tough."

In this connection I commend reading of an editorial from the Indianapolis Sunday Star recently reprinted as a guest editorial in the Manchester, N.H., Union-Leader.

THE REVOLT OF THE PAMPERED

(Guest editorial from the Indianapolis Sunday Star)

Although less than 10 per cent of American youth has been participating in the violent, senseless protests about their own colleges and universities, there is a growing danger that the noisy, militant leaders of America's young revolutionaries will lure more and more students to their cause.

The vast majority of students are seriousminded young people striving to get an education. They have, so far, refused to enter into "the gory glee" of hell-raising on the campus. But no leadership among the silent majority of students has arisen to challenge the revolutionaries.

The president of the student body at a large state university was elected by a vote of 1,013 to 323. Only 1,300 of 23,000 students voted in that election. They simply weren't interested in the militant program of the radical leaders. However, the student who was elected president claims that he represents the entire student body and demands a voice in board of regents meetings despite the fact that 90 per cent of the students wanted no part of his program.

Unless the students who believe they go to college to get an education rather than to start a revolution begin very shortly to organize and challenge the revolutionaries on the campus, they may find they have waited in silence while their precious heritage of freedom and opportunity has gone down the drain in a blazing, destructive, senseless revolution led by leaders who don't know what they want or what they would do with it if all their demands were granted. They want a noisy voice in everything but beyond that they know not what they are shouting about.

A sober observation about America's youth recently came from England where the editor of the London Daily Telegraph declared that no generation of young people ever had as great a heritage of freedom and opportunity as today's American youth.

Under the caption "Revolt of the Pampered," the editor of the Telegraph wrote:

"America is a victim of its national myth. It entered history proclaiming the rights of man. Its Constitution is aimed at fostering freedom at all costs. Its young have been brought up largely on an educational theory which attaches supreme importance to self-expression. Is it odd that it should lead the world in rebellion or that its volunteer forces should sometimes lack the virtue of unrelenting discipline? Yet the marvel does defy explanation. Why should America's pampered and idolized student youth, living in a country that enjoys freedom and prosperity in unprecedented degrees, turn all its righteous anger not against the despotisms that rule most of the rest of the world, but against America itself?"

A PROPOSAL FOR PREVENTIVE CAMPUS ACTION

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. ASHBROOK. Mr. Speaker, slowly but surely indications are appearing that public reaction to radical violence on campuses is resulting in various legitimate—and incidentally, peaceful and legal—proposals for corrective action. More and more school administrators have been putting themselves on record endorsing firmer approaches to cope with illegal actions against educational institutions. In addition, increasing emphasis is accentuating the rights of the offended, the serious students and others who have suffered losses due to this comparatively recent phenomenon of campus lawlessness. There appears in the September 9 issue of the CONGRESSIONAL RECORD the text of a position paper issued by Americans for Effective Law Enforcement which proposes the use of lawsuits for potential plaintiffs, the nonviolent students, the taxpayers and the contributors of funds to the educational institutions.

The Wall Street Journal of September 10 carried a short but pertinent item stressing the same corrective theme proposed by the dean of the University of Wisconsin Law School and a noted insurance expert which has been introduced in the Wisconsin legislature. Centered around a student-supported insurance fund, the proposal is designed "to motivate responsible students to take control from undisciplined activists who lead them astray." I insert at this point the above-cited item from the Wall Street Journal entitled "Wisconsin Proposal Would Assess Student for Campus Disorder":

WISCONSIN PROPOSAL WOULD ASSESS STUDENT FOR CAMPUS DISORDER

THOSE ATTENDING STATE SCHOOLS WOULD PAY DEPOSIT TO COVER DAMAGE CAUSED BY DISRUPTION

(By a Wall Street Journal Staff Reporter)

MADISON.—College students in Wisconsin would be assessed as much as $300 a year to pay for damages resulting from campus disruptions if a proposal made by a legislative study group becomes law.

The student-supported insurance fund—the first of its type in the country—was proposed "to motivate responsible students to take control from undisciplined activists who lead them astray," asserted its drafters, who include the dean of the University of Wisconsin Law School and a noted Pennsylvania insurance expert.

The proposal brought opposition from university officials. One declared it would "prevent some students from getting a college education in the state." The University of Wisconsin has been a center of campus protest and violence, capped by a recent bombing.

Under the plan, each of Wisconsin's 7,000 students at state universities and junior colleges, would pay a $100 deposit each semester. Ninety percent of the deposit would go into a special account for a student's particular campus and be repaid to the student if there weren't any losses during the semester. The other 10% would be nonrefundable and would go into a general reinsurance account for all public institutions of higher education in the state. Students could be assessed as much as $150 a semester if losses exceeded a campus' special account's fund.

The proposal would insure against property damages, cover death, disability and medical expenses for persons hurt in disorders, pay costs incurred by calling in National Guard troops or state police and, "within limits," compensate private property owners for losses resulting from student disorder.

The proposal is far from becoming law. It has been sent to members of Wisconsin's insurance laws revision committee, who must act upon it, as must members of the Wisconsin legislative council and the state legislature.

AMERICANS DISAGREED WITH PRESIDENT

HON. LAWRENCE J. HOGAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. HOGAN. Mr. Speaker, although many Americans disagreed with President Nixon's decision earlier this year to send American troops into Cambodia, I am sure all held the hope that, once begun, this campaign and its costs in American lives and money would bring the War in Vietnam closer to an end and permit more immediate and greater Vietnamization of the War.

Even though this hope remained upon completion of the exercise, when statistics of captured and destroyed enemy bases and supplies clearly indicated short-range success of that operation, it was yet difficult to evaluate the long-range impact of this action on the war.

In the September 7, 1970, issue of U.S. News & World Report, Col. William C. Moore of the U.S. Air Force provided an appraisal of the situation in Southeast Asia 2 months after the Cambodian operation, which I found very interesting. I recommend it to the attention of the Members:

A MILITARY APPRAISAL—CAMBODIA PLUS 2 MONTHS

(By Col. William C. Moore, U.S. Air Force)

Four months have passed since U.S. forces moved into Cambodia to destroy Communist sanctuaries. Two months have passed since U.S. troops completed their mission and were withdrawn on June 30.

What are the military results at Cambodia-plus-two-months?

Sufficient time has not passed to permit a conclusive appraisal of the over-all strategic implications of the Cambodian operation. But sufficient time *has* passed to permit analysis of the tactical pluses and minuses that accrued during the operation and since.

On balance, the pluses far exceed the minuses. Most importantly, the Allied position in South Vietnam has improved far more than expected. And it was to improve the Allied position in South Vietnam that the Cambodian operation was undertaken.

The most significant failure of the Communists has been their slowness in re-establishing new base areas from which to conduct operations against South Vietnam. They are attempting to do this now in Southern Laos and Northeast Cambodia. Here the enemy has been forced to accept less efficient, more vulnerable alternatives than the sanctuaries he had in Cambodia.

Sanctuaries, assembly areas, bivouacs—call them what you wish—are extremely important to military operations. They permit combat troops to rest, regroup and plan new attacks. Most importantly, they permit combat units to assemble, to concentrate in force prior to commitment to battle.

Without base areas, concentration must be done independently by small units at the scene of battle.

Under the most favorable circumstances, this is a tricky, highly sophisticated military operation which military leaders try to avoid as extremely dangerous. To attempt such an operation—considering the climate and terrain of Southeast Asia—would be a cardinal tactical error.

The consequences to North Vietnamese commanders making such a decision would more often than not be disastrous. Commitment of forces would be piecemeal, with subsequent defeat in detail by Allied forces. The military commanders in Hanoi and in the field know this.

In order to comprehend fully what the loss of the base areas in Cambodia means to the enemy, the loss should be viewed in the perspective of history.

In 1967 the enemy base areas, known then as War Zone D, War Zone C and the Iron Triangle—and encompassing more than 1,500 square miles of area—were in South Vietnam. The Iron Triangle was only 25 miles from Saigon.

In late 1966 and early 1967 these areas were overrun and cleared out by the Allies during a series of operations, the principal one being "Junction City."

As a result, the enemy established new sanctuaries in Cambodia, principally in the areas called Fishhook and Parrot's Beak.

Now these have been disrupted by the Cambodian operation; the newest strongholds, it appears, will be in Northeast Cambodia and Southern Laos, approximately 275 miles from Saigon.

The geographical progress since 1967 in reducing the threat to Saigon, and indeed the whole of South Vietnam, is readily apparent.

This retrogression is a serious blow to the enemy. Vital areas of South Vietnam are now great distances from the new bases. Enemy troops will no longer have a short midnight jaunt to their targets. Infiltration routes will no longer be as free from danger as they once were. The new sanctuaries themselves will not be immune from attack, as were the old. The Allied air forces will see to this. There will be no rest and recuperation for the troops once they leave North Vietnam.

Enemy leaders will find that planning and conducting military operations under these conditions will be far more complicated and hazardous than before. Getting troops to vital targets will be at best a long-drawn-out operation. Supplying them for any form of

sustained attack will be even more difficult and time-consuming.

The dilemma facing the enemy planners will be nothing compared with that facing the individual soldier who will be operating continuously in an environment that will grow more hostile each mile he travels southward from North Vietnam. The trail south will not end in a large, well-stocked, secure rest area, as it once did. For many soldiers, apprehension and preoccupation with their own survival will make them less effective, less able to carry out the tasks assigned to them.

Before and after Cambodia—How war in Vietnam has dropped off:

Two months before Cambodian operation, March–April, 1970, weekly average: 108 Americans killed in action.

During Cambodian operation, May–June, 1970, weekly average: 141 Americans killed in action.

Two months following Cambodia, July–August, 1970, weekly average: 70 Americans killed in action.

Thus, in the two months since the end of the Cambodian operation, U.S. combat deaths in South Vietnam have declined by 35 per cent from the two-month period immediately preceding the attack on Red sanctuaries.

OTHER INDICATORS IN VIETNAM

	Pre-Cambodia weekly average March-April 1970	Post-Cambodia weekly average July-August 1970	Down (percent)
Enemy terror and sabotage attacks	490	233	52
Enemy ground ambush attacks	40	6	85
Enemy attacks on population centers	7	4	43
Enemy battalion-level attacks	1	1	(1)
U.S. aircraft lost	40	17	58
South Vietnamese troops killed in action	300	267	11
Communist troops killed in action	2,561	1,558	39

[1] No change.

Source: Vietnam field reports through Aug. 25.

Under these conditions, it is doubtful whether the enemy ever again will be able to mount a large-scale operation in the Mekong Delta or, for that matter, in the southern half of South Vietnam. If he does, it will be short-lived, suicidal and of no lasting significance. The report that the enemy will return to guerrilla warfare using extremely small units is undoubtedly true. But this decision is not a preferred choice by the leaders in Hanoi. The operation into Cambodia has given them no alternative.

Since the end of the Cambodian operation, the U.S. Department of Defense has monitored statistics in South Vietnam closely to determine trends. These statistics confirm the optimism engendered during the Cambodian operation. The tactical situation is better, not worse. The chart on page 32, prepared by "U.S. News & World Report," shows the dramatic improvement since the attack on the Cambodian sanctuaries. It is worth noting that the number of enemy killed has dropped. This is a plus, not a minus. It indicates an unwillingness to stand and fight—not better performance by the enemy.

The reductions take on added significance when you consider that the statistics shown prior to the Cambodian operation are themselves a dramatic reduction from the statistics for 1969. In American lives lost, for example, the post-Cambodian figures represent a 35 per cent reduction from the pre-Cambodian figure, as shown on the chart, but this is a 60 per cent reduction below 1969 figures.

Recent reports indicate that infiltration of enemy troops into South Vietnam, based on monthly averages for the first half of 1970, has been one half the 1969 monthly average—from 12,000 to 6,000 per month. This is barely enough to replace losses.

These signs point to significant progress in the tactical military sense. This in turn portends progress in the broader strategic sense. It means progress in Vietnamization. Asian forces are assuming more and more of the burden. The number of combat operations in which absolutely no U.S. forces are involved increases daily. U.S. forces are being withdrawn on schedule. Draft quotas at home, as one result, are the lowest since 1964.

The optimism contained in this report does not mean that the U.S., South Vietnam or Cambodia itself is out of the woods. Things could change, governments could fall, the end of the monsoons could signal new initiatives on the part of North Vietnam. Targets in South Vietnam opposite the new Communist base areas are sure to come under more and more fire—as indeed some already have. The figures on the chart may rise; they may approach the pre-Cambodian figures. But at present, this seems unlikely.

The U.S. will continue to monitor closely enemy activity to determine Communist intentions. Their activity in Cambodia and Laos will be of particular interest. The leaders in Hanoi, having suffered a crippling blow to their ability to attack South Vietnam, may now attempt to redress the situation at the expense of these two countries. The odds at present, however, do not favor early success in such a venture.

THE UNITED NATIONS IS 25 YEARS OLD—SO WHAT?

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. BROWN of California. Mr. Speaker, this morning's newspaper carried a story indicating that a Presidential commission reports that the United Nations must undergo a number of needed reforms if it is to become the effective instrument that we had originally hoped it would become.

The urgency of this need was spelled out in May of this year by Secretary General U Thant, who stated:

The Members of the United Nations have perhaps 10 years left in which to launch a global partnership to curb the arms race, to improve the human environment, to defuse the population explosion, and to supply the required momentum to world development efforts. If such a partnership were not developed within this decade, these problems might reach such staggering proportions that they would be beyond our capacity to control.

A former colleague, Jerry Voorhis, agrees with the contention that changes are needed in the U.N., stating in the July-August 1970 issue of World Federalist magazine that:

The United Nations should be given original authority to stop or prevent wars. It should be able to tell any single nation that it cannot interfere by force in the affairs of any other nation. Czechoslovakia or Vietnam, for example.

The United Nations should be strong enough to enforce a disarmament treaty so all nations could trust its effectiveness.

If need be, the Charter should be amended to make all this possible.

Mr. Voorhis goes on to point out that taking steps like these:

To save mankind from nuclear death would be a worthy way to observe the 25th anniversary of the United Nations.

He indicates, and I agree, that the United States policy toward the U.N. will have to be drastically altered if these steps are ever going to be undertaken. I am sure that our colleagues will find this article to be most worthwhile, and I ask unanimous consent that it be printed in the RECORD at this point:

THE UNITED NATIONS IS 25 YEARS OLD—SO WHAT?

(By Jerry Voorhis)

(Mr. Voorhis is a former US Congressman, educator and author. A world federalist from the early days of the movement, he attended while still a Congressman conferences which led to the formation of the United World Federalists (changed to World Federalists, USA, in 1969). Jerry Voorhis continues to provide active support to the federalist movement in the USA).

Nineteen seventy marks the 25th anniversary of the founding of the United Nations.

On the back pages of newspapers for Wednesday, May 6, 1970, appeared an article which told of a call by the Secretary-General of the United Nations for a conference of "all interested parties to settle the tragic wars raging in Southeast Asia".

It is certainly logical for the Secretary-General to make this proposal in the 25th anniversary year of the founding of the United Nations in 1945.

But tragically enough there is no assurance that the "interested parties" will respond positively to the Secretary-General's appeal.

For Americans the question is what response the United States will give to it.

Surely if the United States government really wants to bring the wars to an end and bring its soldiers home it will immediately accept the proposal of U Thant and challenge other "interested parties" to do likewise.

But there is no assurance that this will happen.

Nor is there assurance of vigorous "all-out" support from the USA for the proposal of 11 Asian UN member nations for a conference to settle the Indo-China wars.

For in recent times the United States has shown far less respect for the United Nations than should have been the case.

Nor have the so-called "great powers" done much better.

Why?

Because the United Nations was created in the first place, and has been, ever since, an institution very different from what the people of the world hoped and believed it was going to be. They hoped and believed that the UN would be an agency of peace, an agency speaking for mankind, a world-wide institution able to stop wars, effect disarmament and keep the peace.

But the "great powers" saw to it that the UN would be no such thing. Instead they hedged it 'round with all manner of disabilities, only a few of which have been overcome as time has passed.

The United Nations has no original authority of its own. Only that which its members give to it. Its World Court, thus far at least, has only those cases brought before it which *both* parties to the dispute are willing to submit. The Court has only the jurisdiction which its litigants will give it. It is

like a policeman who would have to get a criminal's permission before he could arrest him.

The United Nations can enter, with teams of observers, or peace-keeping forces, or conciliators, only those countries which consent to let it come. And those countries can tell the UN to get out whenever they please.

The UN cannot raise a dime except what its members voluntarily contribute. It cannot raise a soldier except by appeal to its member nations to supply contingents. United States soldiers are still dying and killing in Southeast Asia for one principal reason: because their country, and others, have refused to make the United Nations strong enough so it could bring about and enforce peace in Southeast Asia or the Middle East or anywhere else in the world.

And yet, despite all its handicaps and weaknesses, the United Nations has accomplished remarkable things in its 25 years of existence.

It has brought literacy, better health, and more efficient food production to millions of people. It has enabled dozens of countries to obtain their independence. In a few cases where the "powers" allowed it to act, it has brought peace to troubled areas. It has provided a world forum where the crimes of nations could be—and are being—exposed to the light of world opinion. It has begun to establish a principle of accountability of nations to the judgment of mankind.

There are urgent problems with which the UN is currently trying to deal.

One of these is chemical and biological weapons—the most diabolical kind of weapons yet devised. So diabolical in fact that even Hitler never used them.

An overwhelming majority of the members of the United Nations are seeking to implement the Protocol of Geneva, agreed to in 1925, which prohibits the use of chemical and biological weapons, and which every major nation on earth has ratified—except the United States. Almost all the member nations of the UN want a strong treaty that would ban the production or use of *both* chemical and biological weapons.

They had reason for encouragement when, some time ago, Mr. Nixon made a speech renouncing the first use of such weapons by our country.

But the United States now refuses to include chemical weapons. It wants the prohibition to be against biological weapons only. Because we are using chemical weapons all over the place in Southeast Asia. When a resolution was presented in the UN to ban CBWs completely, the United States voted against it. Only Portugal and Australia voted with us.

The 24th General Assembly of the United Nations voted 82 to 0 to ask the United States and Russia to stop the testing and deployment of any more frightful nuclear weapons. Neither of them has done so. On the contrary the United States is going right ahead with full development of the MIRV—the multiple warhead missile that can hit many cities at once.

Most of mankind wants to prevent the beds of the seas from being used for the installation of nuclear weapons. Most of mankind wants to declare the seabeds as the "common heritage of all mankind". The great wealth which lies beneath the seas could then be used to provide desperately needed income for the United Nations and its peace-keeping efforts. Belgium, Norway, Sweden, Ecuador and the Cameroons have proposed such a treaty. The United States has opposed it.

There were eight votes in the last session of the United Nations General Assembly which would have advanced the cause of peace. India, Pakistan, and Ceylon voted YES on all these eight proposals. Russia supported only three of them. The United States supported only two.

Americans who care about the future of mankind—or about the lives of their own sons—have "homework" to do.

The United Nations should be given *original* authority to stop or prevent wars. It should be able to tell any single nation that it cannot interfere by force in the affairs of any other nation. Czechoslovakia or Vietnam, for example.

The United Nations should be strong enough to enforce a disarmament treaty so all nations could trust its effectiveness.

If need be, the Charter should be amended to make all this possible.

Taking steps like these, to save mankind from nuclear death would be a worthy way to observe the 25th anniversary of the United Nations.

But if any such steps are to be taken the policy of our own country toward the United Nations will have to undergo something like a complete turn-around. *We* have to start really seeking peace instead of military dominance.

There is one piece of as yet uncertain evidence that gives a ray of hope.

Life Magazine in its excellent editorial about the 25th anniversary exposes that ray in these words:

A new initiative is also needed to establish peace-keeping machinery on a permanent basis . . .

With big-power agreement—and there are signs the US and Russia seek accommodation in a number of areas—a small UN stand-by force in the next year is attainable. It would be a worthwhile improvement for a world organization which, liabilities notwithstanding, has proved itself consistently useful—and occasionally vital—in its first 25 years, and is well worth sticking with and strengthening now.

ANNUAL PROGRESS REPORT TO CONSTITUENTS—PART II

HON. DONALD W. RIEGLE, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1970

Mr. RIEGLE. Mr. Speaker, as I indicated last May, it has been my policy since I was first elected to Congress in 1966, send to my constituents in Michigan's 7th District an annual progress report explaining my activities as their Congressman. On May 14, I inserted into the CONGRESSIONAL RECORD part I of my 1970 progress report.

Having just completed part II of the 1970 progress report, I would like to insert it into the RECORD at this point, so that it will be available to the general public:

YOUR ANNUAL PROGRESS REPORT FROM CONGRESSMAN DON RIEGLE, 1969–70, PART II

DEAR FRIEND: This is the second portion of a two-part Annual Report dealing with our work in Congress over the last year—on the issues and problems facing our country. Its purpose—together with Part I which you received several weeks ago—is to provide you with up-to-date information on work done, and on the problems that remain ahead.

As always, this Congressional job belongs to all of us—and I need your help. I work for you, and I need and welcome your comments and suggestions.

Please let me know if I can ever be of help to you or your family.

Sincerely,

DON RIEGLE.

BUILDING A BETTER RELATIONSHIP WITH FRANCE

Since the retirement of Charles DeGaulle and the emergence of the Pompidou Administration, there has been a new opportunity to build a better working relationship between the U.S.A. and France—our oldest ally. Some months ago, Congressman Riegle and Congressman Ottinger (D-NY) co-hosted a group of young French Congressmen who visited Washington and several Congressional districts across the country. The two groups of Congressmen met to discuss common problems facing the two countries—particularly foreign policies concerning S.E. Asia and the Middle East.

These French legislators came to America to compare ideas for making representative government work better—and to develop closer ties with their legislative counterparts in the United States. Ms. Terrenoire, Congressman Riegel's guest, felt the most useful part of his visit was spent in Flint—meeting with local citizens—beginning at 6 a.m. at the Buick Plant gates. Ms. Terrenoire invited the U.S. Congressmen to France for a similar visit, which had the dual purpose of evaluating the Paris Peace Talks on the Vietnam situation.

PARIS PEACE TALKS

A few weeks ago, I was privileged to head a 9 man official bipartisan congressional delegation to France. One important part of our work was a lengthy private session with Ambassador Habib who at that time was the head of the American negotiating team at the Vietnam Peace Talks in Paris. I knew Ambassador Habib before he was asked to head the Peace Talks and his lengthy off-the-record briefing was candid and thorough.

Although I cannot reveal the substance of his remarks, I can relate my own impression of where the "Peace Talks" stand today: The outlook for a negotiated settlement is grim. After some two years at the conference table, virtually no progress has been made. During that period, 20,346 American men have been killed in Vietnam.

It appears that any negotiated settlement would require the formation of a coalition government in South Vietnam—a mixed government that would share power among all major religious, regional, ethnic and political groups in Vietnam. The Thieu/Ky regime, now in power in South Vietnam, refuses to consider sharing power through a negotiated settlement, and the U.S. Government has said it will not force the Thieu/Ky regime to compromise. Meanwhile the war continues, with 2,830 Americans killed during the first 6 months of this year.

While the appointment of a new Ambassador, Mr. David Bruce, is a hopeful sign, the fundamental negotiating positions of the two sides have not changed, and the near-term prospects for a significant breakthrough in the talks are regrettably not good.

KOREA AN IMPORTANT LESSON

As a representative of the Appropriations Committee, Congressman Riegle visited Vietnam and South Korea to evaluate the continuing American military and economic efforts in those countries. A previous study we made of postwar Korea showed that Korea really got on its feet, and became independently strong, only when the U.S. stopped carrying the load.

Based on his briefings and observations in Korea—and along the Korean DMZ—Congressman Riegle formally recommended to the Administration and the Appropriations Foreign Operations Subcommittee, that the remaining American troop level in Korea be

reduced—and finally phased out. It's important to remember that the Korean War ended 17 years ago, and the population of South Korea is about twice as large as that of North Korea.

In a recent statement, the Secretary of Defense announced that an official decision has been reached to finally begin the phased withdrawal of American troops from Korea. Congressman Riegel said: "I am encouraged to see this shift of military responsibility to the South Koreans where it belongs. This is an important breakthrough."

OUR APPROPRIATIONS COMMITTEE ASSIGNMENT

WORKING TO CUT GOVERNMENT SPENDING—AND CHANGE OUR PRIORITIES

One way to attack the rising cost of living problem is to cut wasteful and unnecessary government spending. Serving on the Appropriations Committee, I share the responsibility for reviewing the entire 200 billion dollar national budget. Thus far this year we have been able to cut over $7,000,000,000 from the Administration's budget requests. Of course, our job is not just to cut spending but to see that $'s are properly used where they will do the most good. Clearly the Congress must do a better job in this area.

FOREIGN OPERATIONS SUBCOMMITTEE

This year we continued to seriously question the value and effectiveness of the U.S. Foreign Aid program and took action to cut it back by $1,175,304,000—the largest reduction in history. My firsthand inspection of AID projects in Thailand, Vietnam, Korea, India, etc. provided convincing evidence that we must reallocate our direct foreign aid assistance to countries on the basis of our strategic security interests. We also have to put more emphasis on helping people help themselves. We are now beginning to move more in this direction.

DISTRICT OF COLUMBIA SUBCOMMITTEE

Many of the problems of Washington, D.C. stem from the fact that the citizens of D.C. are denied local self-government. This is wrong and must be changed. To help get at D.C.'s problems, I recently took the unprecedented step of forming a 25 person advisory council of D.C. citizens and professional experts to help me do a better job of representing the citizens of the District of Columbia. This group helped me prepare for our subcommittee budget hearings by providing me a direct grassroots understanding of the District's problems. Many important problems were brought to light—and I intend to continue this practice. Hopefully this effort will provide at least one small bridge toward self-government, while helping to solve the urban problems here in our nation's capital.

YOUR CONGRESSIONAL OFFICE AT WORK 1969–70

WORK WITH INDIVIDUAL CITIZENS

3,411 individual case problems solved.

11,800 letters received and answered.

16,000 special information letters, and individual responses to petition signers.

4 newsletters to each family.

WORK IN THE COMMUNITY

75 local federal aid projects monitored.

1,050 congressional office inquiries and followup on local federal programs.

22 working trips back to Genesee and Lapeer counties by the Congressman, 86 meetings with local groups, regular neighborhood "office hours" held in area shopping centers, thousands of personal conversations.

190 statements and discussions on issues through local and national press media.

YOUR DISTRICT CONGRESSIONAL OFFICE

34,000+ phone calls received from local citizens.

2,000+ citizens visit to the office with questions or problems.

384 community meetings attended by Congressman's staff.

135 unpaid volunteers pitching in to help bring good congressional service to our community. (if you'd like to help call 239–5705).

ACTION IN CONGRESS

353 votes on legislation.

APPROPRIATIONS COMMITTEE ASSIGNMENT

86 committee meetings.

7 billion dollars + saved by cutting unnecessary spending.

VETERANS

As the daughter of a deceased veteran, I have missed a semester of college because I have been unable to get financial aid from the Veterans Administration. Can you help me?

A quick phone call showed that her application was 8 weeks behind schedule. As a result of this inquiry she received the scholarship in time for the next semester.

INTERNAL REVENUE

I am a minor who was left holding the bag for back taxes on my deceased father's business. It doesn't seem right that I should have to pay all the family debts when I'm not even 21 years old.

The IRS decided he was not a true partner in the firm and therefore not responsible for its debts. All money he had paid in back taxes was reimbursed.

SOCIAL SECURITY

I am totally disabled, losing my sight and struggling to maintain my family, yet Blue Shield contends I am not entitled to additional benefits. I don't want sympathy, only my rightful allotment.

After a brief investigation he received his rightful allotment—an extra $210.

I don't think my Medicare reimbursement claim will ever come through. I am trying to find out why the delay and am getting nothing but the run-around.

Our intervention forced the immediate correction of the bureaucratic delay and the check was in the mail.

IMMIGRATION

We have 300 children in our congregation school, but no teacher. The man we hired to run the school is in Canada, unable to obtain a visa to enter the U.S. Without a teacher we may have to cancel everything—and school is scheduled to start in 3 days.

Our inquiries showed no legal hang-ups—just thoroughly mixed-up communications. By dealing directly with top federal officials, we were able to bring this man to Flint in time to begin classes on schedule.

MILITARY

I'm home on emergency leave. My wife is ill and hospitalized, facing the possibility of losing our unborn child. My leave expires in 2 days and the Army still has not acted on my request for a hardship discharge.

Extension of leave was granted immediately—shortly thereafter he received a hardship discharge.

TEACHER CORPS

I applied to the Teacher Corps in January; it's now April and still no word. I graduate from college in June and would like to make future plans. Can you please help me?

We found that many Teacher Corps centers were in need of volunteers. The young man is now teaching in Minneapolis.

HANDICAPPED STUDENT

My daughter lost her arms and legs in a car accident but—thank God—has now worked her way back to where she can be a student at Wayne State. The Division of Vocational Rehabilitation, having assured us she would receive money for tuition, room and board, now tells us she can only have half of this aid. Are there any federal programs that could help our daughter?

Upon reexamination, the Division of Vocational Rehabilitation decided the seriousness of the case—and the girl's valiant personal efforts—merited full financial aid. Funds were allotted and the girl is now in college—and making great progress.

WASHINGTON'S COMMUNITY SCHOOL PROGRAM EXPANDS—WITH FLINT'S HELP

A most satisfying accomplishment this year on the D.C. Appropriations Subcommittee was to help in expanding Washington's two "pilot" community schools to a total of 13 community schools for this coming year. In 1967–68, the Mott Foundation and the Flint schools helped start the first two "pilots." Here's what's happened since:

The first two schools showed good results—community involvement of all age groups, increased pride, higher scores in reading and arithmetic, lower rate of vandalism, etc.

We made a formal presentation to former HEW Secretary Finch, who, along with HUD Secretary Romney, has provided Administration interest.

D.C. schools scraped up federal and city money to get four more community schools going.

Based on good results of these first schools, we persuaded Senate and House Appropriations Committee members to fund two more new schools this year.

To help carry on these initiatives, the Mott Foundation agreed to fund five more schools for a full range of community activities—bringing the grand total at this time to 13 schools.

Only by this kind of citizen-government and public-private cooperation can we offer full and equal opprtunity for all the citizens of our nation's capital and set an example for other cities across the country.

FENTON HIGH SCHOOL DEDICATION—MARCH 22, 1970

(What follows is a portion of the dedication remarks of Congressman Riegle) . . . "these buildings—this new school—represents an investment in our young people and in the world they will build.

This school was built because this generation believes in the next generation—it is why we tax ourselves today to raise the money necessary to provide the working tools our country needs to build a good tomorrow. This school was built to provide a place where people can learn—about themselves, and about the challenges and opportunities that confront us all.

It is not the outside of these buildings that we dedicate today, rather it's what happens inside these buildings that really counts—and that story is ours to write each day. For we will accomplish here, exactly what we require of ourselves. If we require excellence and do the things necessary to achieve excellence—then that can be one of our accomplishments. And this is true for teachers and students alike.

If we seek to make our students open—and striving—and honest—and loving—and sensitive to the needs of others—then we can accomplish this—perhaps we can form a student volunteer service here—a program where students could do part of their learning outside the school—and inside human and social problems in the community. Most of the young people I know want to be involved in the world around them—and want to participate—want to help—Let's let them do it—let's encourage their contributions of effort.

Why not let them work on the pollution problems here locally. Or, let them organize themselves to help our senior citizens and retirees. I think a young high school person helping an older person take down storm windows is one good way to bridge the generation gap.

AUTO SAFETY AND EMISSION CONTROL

Recently Congressman Riegel spent a day at the General Motors Technical Center, and the G.M. Proving Grounds, to better under-

stand and evaluate progress being made in improving auto safety and controlling automobile exhaust. After briefings by automotive experts and careful examination of the work being done and the results already achieved, Congressman Riegel said, "I was highly encouraged by the quality and quantity of determined effort, underway now for some years by the management and workers of G.M., to solve these two problems. Tremendous progress has been made in building safety features into cars—and I share the belief that we are rapidly approaching the point where further major reductions in traffic fatalities will have to come from improved highway design, driver performance, and by doing a better job of keeping unsafe drivers off the road."

"On control of auto exhaust, several experimental designs are being tested. Present exhaust systems have greatly reduced the amount of air pollution coming from new cars—the remaining challenge is (a) to eliminate all toxic fumes at a cost that will not drive the cost of cars up so far that people stop buying them, and (b) to develop ways for car owners to maintain and service their cars so that exhaust performance will not degenerate to unaccepted levels as the car gets older."

OUR ECONOMY IS IN TROUBLE

The cold facts are that every American family is being hurt by rising prices, rising unemployment, high interest rates, and ever-increasing taxes. Our present national economic policies are wrong and must be changed. I have fought these policies tooth and nail but they persist despite my opposition and the opposition of others.

We must take emergency action to:

Get our unemployed men and women back to work.

Stop the rising cost of living.

Bring interest rates down.

Stop spending tens of billions of dollars in Southeast Asia.

Today the Federal government is spending too much money on the wrong things—such as excessive farm subsidies, Vietnam, the supersonic transport airplane, the space program, the multi-billion dollar ABM white elephant, cost overruns on government contracts, etc. We've got to cut down this massive government spending by eliminating the waste and low priority items.

We must also face up to the continuing wage/price spiral—rising costs and prices which bear no relationship to product improvement and real productivity. We must insist on policies that begin to stabilize the price level—and which are fair to labor and management. More direct Presidential and Congressional action on prices and wages is long overdue.

As you know, last year I voted against the 10% surtax—and I will oppose any request for higher taxes now or in the months ahead, because I believe people are being taxed to death and I'm convinced much of any new tax revenue would be wasted on unnecessary budget items.

IS THERE A NATURAL GAS SHORTAGE?

HON. LEE METCALF

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 15, 1970

Mr. METCALF. Mr. President, many of us are concerned about the accelerating depletion of our energy resources. Some of us are also concerned about the adequacy and reliability of data upon which Federal and State resource management decisions are based.

The shortage of information is especially crucial regarding the natural gas industry. Congress is partly to blame for this. It has not seen fit to pass the proposed Natural Gas Information Act, S. 3900. This proposed legislation has been recommended by the Federal Power Commission during the tenure of four Commission chairmen: Jerome Kuykendall, Joseph Swidler, Lee White, and John Nassikas. Nor has Congress chosen to act on the Utility Consumers' Information and Counsel Act (S. 607 and H.R. 4866), which would provide legislators, regulators, and the public with basic information that is closely guarded by gas, electric, and telephone companies.

So Congress is not blameless in the matter. On the other hand, the Federal Power Commission appears too ready, if not eager, to accept the gas industry's claims of shortages and requests for higher rates and special bonuses. Substantial testimony before the Senate Subcommittee on Antitrust and Monopoly indicated that gas producers are not reporting discoveries; producers are collectively withholding gas from the market pending approval of increases which could boost gas costs by from 50 to 100 percent for consumers, utilities, and industrial users.

The distinguished senior Senator from Michigan (Mr. HART), chairman of the Subcommittee on Antitrust and Monopoly, has asked the Federal Trade Commission to use its unique authority and determine the gas reserves which the Federal Power Commission is unable to determine. Ongoing events close at hand underscore the need and urgency of such a survey. These events, which involve the Virginia Electric & Power Co., also illustrate how precipitate action by utilities can lead to substantial increases in housing costs as well as utility bills, and decrease construction of needed new housing.

Vepco sells electricity throughout much of Virginia. In addition, Vepco also sells gas in the populous Tidewater area of Virginia. The company is currently spending thousands of dollars advertising the sale of natural gas in the Norfolk area. One would gather from the ads that the company is ready, willing, and able to fulfill its obligation as a public service corporation.

Therefore, I was amazed to learn that this same company which is advertising for increased sale of natural gas has preemptorily moved to discontinue the provision of gas service to new customers. Vepco's senior vice president said that the move was necessary because the company could not assure adequate supplies of gas to customers for the next two winters. This abrupt decision by Vepco could sharply increase utility bills, the housing shortage, and housing costs. Electric heat is conservatively estimated by Virginia architects to be approximately $5 a month more expensive than gas heat. Furthermore, Federal Housing Administration underwriters have refused to permit the use of electric heat in projects under their jurisdiction because of high operating costs. The unavailability of gas for new customers will jeopardize needed new housing projects.

In addition, the utility's effort to immediately halt service to new customers adds to the cost of housing designed for gas heating. Extra thousands of dollars will be required for the redrafting of plans. These extra costs will no doubt be passed on to new homeowners, who have already paid to have the housing plans drawn for the use of gas heat. They, the builders, and the architects had every reason to believe that Vepco would fulfill its utility responsibility and provide the gas, as advertised. In elaboration of this point, I shall place in the RECORD later in these remarks a letter from a Norfolk architectural firm which has 1,423 apartment units in various stages of completion, with 560 drawings, including mechanical design and layout, ready for construction, all designed for use of gas fuel, which the utility now says it will not supply.

The only party which stands to benefit from Vepco's refusal to serve will be Vepco. It has a monopoly on electricity, the principal alternative energy source, for the sale of which it obtained a substantial rate increase this year.

The Vepco case illustrates the need for the passage of S. 4013, which would require Vepco and the 77 other combination gas-electric utilities to divest themselves of either the gas or the electric department, in order to encourage competition and its benefits to the consuming public. More immediately, Vepco's actions—its advertising the sale of a fuel it suddenly refuses to supply—suggests that the company either advertises indiscriminately—at the customer's expense, of course—or else is extraordinarily uninformed regarding the availability of one of its principal products.

We must remember that the only information the public has on natural gas supply is what the industry chooses to report. Either industry information is unreliable or else the customers are paying for false and misleading advertising. Senator HART's proposed inquiry by the Federal Trade Commission is in order. The FTC should proceed with thoroughness and dispatch.

Mr. President, I ask unanimous consent to have printed in the RECORD the letter previously referred to, from Irwin M. Kroskin, of the Norfolk architectural firm of Brundage, Cohn, Kroskin & Associates, to Virginia State Senator Henry Howell; Senator Howell's September 10 submission to the Virginia State Corporation Commission; and an article on the subject which was published in the Northern Virginia Sun of September 12, 1970.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

BRUNDAGE, COHEN,
HOLTON & KROSKIN,
Norfolk, Va., August 17, 1970.

Senator HENRY E. HOWELL,
The State Capitol,
Richmond, Va.

DEAR SIR: The principals in this firm feel that it would be of interest to you in your continuing efforts to "Keep the Big Boys

Honest" to be apprised of one aspect of the recent move by the Virginia Electric and Power Company to discontinue the provision of gas service to new customers as of August 1, 1970.

Multi-family residences comprise approximately 50% of the work in this office and as a firm we are responsible for a large portion of the housing units constructed in Tidewater each year. Apartment projects insured under various Federal Housing Administration programs now account for a definite majority of living units built and many of these are for low-income groups. The increase in construction of these FHA projects, for whatever the reason, does seem to fulfill one of the oft-stated national goals; that of providing housing for the masses.

In recent years the FHA underwriters have refused to permit the use of electric heat in projects under their jurisdiction. Although the initial cost of installation is lower for this equipment than for equipment using any other fuel, the operating costs are so high as to be prohibitive. This fact has resulted in virtually a 100% use of gas-fired equipment for heating in multi-family buildings. This applies to both FHA work and conventionally financed projects. Thus, with all of the "kick-backs" or "advertising allowances", the Gold Medallion program has been unsuccessful in the apartment field. Gas demand continues to increase.

At the present time this office has working drawings for one thousand, four hundred and twenty-three (1,423) apartment units in various stages of completion. The drawings, including mechanical design and layout for five hundred and sixty (560) units, are 100% complete and ready for construction. The working drawings for the eight hundred and sixty-three (863) units are in preparation.

All of these units have been designed for the use of gas fuel which we, unfortunately, assumed was as available as any public utility can be expected to be. This is obviously not the case and in order to proceed with these apartments, the decision will have to be made to provide a mechanical system based on an alternate fuel and the necessary re-design and re-drafting accomplished. The work involved here is considerable and the costs are significant. Of immediate interest to us, and most architects and engineers, is the question of who shall be responsible for the cost incurred in re-doing this work. We, of course, do not feel that the architect or engineer should absorb this cost. The various owners, apparently, are justified in believing that they have paid to have the work done once. Who, then, pays?

The basic point which we wish to emphasize and bring to your attention is that we believe it to be of questionable legality for a public utility to make such an announcement on the same date that it becomes effective. This seems especially true when the policy concerned effects the construction of buildings for which planning and financial arrangements are made far in advance of the actual construction.

As stated before, this is one small aspect of a problem which we believe effects the entire construction industry and probably the entire economy of this part of the state. If we can be of assistance in providing any additional information, do not hesitate to call upon us.

Very truly yours,

IRWIN M. KROSKIN, A.I.A.

PETITION IN OPPOSITION TO THE PROPOSED AMENDMENT FILED BY VIRGINIA ELECTRIC AND POWER COMPANY TO THE TERMS AND CONDITIONS UNDER WHICH IT WILL FURNISH GAS TO CUSTOMERS WITHIN ITS TERRITORY

Now comes Henry E. Howell, Jr., in his capacity as a State Senator to the Senate of the General Assembly of Virginia, and intervenes in the above captioned hearing being held on the application of Virginia Electric and Power Company as above captioned, and petitions this Honorable Commission to deny the application of Virginia Electric and Power Company and to grant other alternative relief as hereinafter set out, for the following reasons, among others to be adduced at the hearing on said application:

First: The City of Norfolk, Virginia, and the State of Virginia, are faced with a critical shortage of low income housing. In particular, the City of Norfolk is a central city which is prevented from expanding its boundary lines by reason of its being adjacent to the Cities of Chesapeake and Virginia Beach. The land area of Norfolk having been fixed, its population expansion and its energetic efforts to rehabilitate old and decadent dwelling units, requires the replacement of these units by low income housing units within the confines of the city. Most of this type of housing is insured under various Federal Housing Administration programs, which in recent years has refused to permit the use of electric heat in projects under its jurisdiction because of the disproprotionate high cost of heating and cooling with electricity as compared to gas.

Second: Virginia Electric and Power Company is a utility which enjoys a monopoly in the City of Norfolk and in other areas of Virginia with respect to the supplying of both electricity and the competing fuel, gas. Recently the Virginia Electric and Power Company has secured a sharp and inflationary increase in its electrical rates and it is to its advantage to have new dwelling units built to be heated and cooled exclusively by electricity rather than by the more economical and more efficient gas energy.

Third: If Virginia Electric and Power Company is permitted to amend its schedule so as not to provide gas to new dwellings after August 1, 1970, the tenants who will occupy any new units built will have saddled upon them the high cost of electricity for the life of the new units, estimated at fifty (50) years and, therefore, tenants will be irreparably harmed for half a century or more if Virginia Electric and Power Company is permitted to create a condition where electricity will be the only source of energy available for the next year or longer.

Fourth: In addition, every citizen who builds his own private residence during the coming year will find that heating and cooling with gas is much more economical than with electricity and if Virginia Electric and Power Company be permitted to refuse to furnish gas to these citizens, they will be saddled with the high cost of electricity for the life of the home.

Fifth: At the same time that Virginia Electric and Power Company is petitioning not to furnish gas to new dwellings after August 1, 1970, it is spending thousands upon thousands of dollars in billboard and bus-side advertising, advertising gas as a fuel to be used in the Norfolk area. Such conflicting corporate action constitutes fiscal irresponsibility and results in the cost of the irrelevant and immaterial advertising promoting the use of gas to be fed into its cost of doing business and to be ultimately reflected in the rates charged to consumers.

Sixth: Utilities that exclusively furnish gas, without furnishing the conflicting competing product of electricity, are not seeking to cut off new gas customers.

Seventh: Portsmouth Gas Company, which furnishes gas to Portsmouth, Virginia, is seeking no such limitation as that sought by Virginia Electric and Power Company.

Eighth: Washington Gas Light Company, which furnishes gas to the populous, booming area of Northern Virginia, has requested no limitation that will affect residential construction, either low cost or high cost. Washington Gas Light Company has found it necessary to limit new customers to 300,000 cubic feet per day, which would limit to some extent large industrial users, but would in no way limit residential construction.

Ninth: The Federal Power Commission is currently holding hearings regarding natural gas supplies and Virginia Electric and Power Company should not be permitted to cease furnishing natural gas for residential purposes during the pendency of these hearings.

Tenth: Admittedly, there is a potential shortage in the future for large industrial users of natural gas by reason of the fact that 83% of proven gas reserves are controlled by twenty of the United States' largest petroleum companies, who are seeking to force a price increase of up to 60% from the Federal Power Commission by conspiring to cut off normal gas supplies to local distributors, but this illegal price fixing anti-trust action on the part of these large petroleum companies is not affecting the ability of other gas distributors in Virginia to furnish the needs for new residential dwellings during the coming year.

Eleventh: To permit the Virginia Electric and Power Company to refuse to furnish gas for new residential units after August 1, 1970, while other areas of the state would have available natural gas for new dwelling units would constitute a discriminatory and unconstitutional practice within the State of Virginia.

Wherefore, your petitioner prays:

(1) That the application of Virginia Electric and Power Company be denied;

(2) That Virginia Electric and Power Company be required to intervene before the Federal Power Commission and present a case to insure that it receives adequate natural gas supplies for its territory at reasonable prices;

(3) That if Commonwealth Natural Gas Corporation cannot furnish Virginia Electric and Power Company with adequate resources of natural gas for new residential units after August 1, 1970, Virginia Electric and Power Company be required to seek other sources of natural gas;

(4) That if Virginia Electric and Power Company cannot obtain adequate sources of natural gas to supply its territories, including the territories of Norfolk and Newport News, that it be required to divest itself of its exclusive franchise license and permit to distribute both electrical energy and its competitive source, gas.

Respectfully submitted,

HENRY E. HOWELL, JR. (Pro se and on behalf of his constituents in the City of Norfolk, Virginia.)

State of Virginia, City of Norfolk, to-wit:

This day personally appeared before me, Catherine J. Crane, a Notary Public of and for the City aforesaid in the State of Virginia, Henry E. Howell, Jr., who after being by me first duly sworn, deposed and said as follows:

That he is the petitioner in the foregoing petition; that he has read the foregoing petition and that the facts contained therein are true to the best of his information, knowledge and belief; that the basis for his information and belief is conversations he has had with officials of the Portsmouth Gas Company, Washington Light Power Company and with architects familiar with the material related herein.

And further this deponent saith not.

HENRY E. HOWELL, JR.

Given under my hand this 10th day of September, 1970.

CATHERINE J. CRANE,
Notary Public.

My commission expires November 11, 1973.

[From the Northern Virginia Sun, Sept. 12, 1970]

VEPCO ASKS PERMISSION TO REFUSE NEW TIDEWATER NATURAL GAS SERVICE

(By Jeffrey C. Reynolds)

RICHMOND.—The Virginia Electric and Power Co. yesterday asked the State Corpo-

ration Commission for permission to refuse natural gas service to new customers in the Tidewater area. The SCC took the request under advisement.

E. B. Crutchfield, VEPCO's senior vice president, said the move was necessary because the utility's supplier is unable to provide sufficient additional amounts to guarantee adequate service for the next two winters.

State Sen. Henry E. Howell, D-Norfolk, intervened in opposition to the VEPCO petition.

Crutchfield said VEPCO's supplier, Commonwealth Gas Co., notified him last May that it could supply only about 50 percent of VEPCO's request for additional natural gas for the 1970–71 heating season and could not guarantee that the situation would improve by 1971–72.

The executive said rather than curtail supplies for existing consumers in the Tidewater area, there was "no alternative" but to deny service to commitments made after last Aug. 1. He said the policy would not apply to single-family homes on existing pipelines.

Crutchfield said VEPCO began supplying natural gas in the Tidewater area in 1951 and pumped out 9.6 million cubic feet daily. By 1967, he said, the figure had risen to 131 million.

The federal power commission has been asked to approve a 60 percent increase in natural gas rates.

"There are reliable reports that the petroleum industry . . . is participating in a concerted action to produce a critical shortage of natural gas in an effort to coerce" the FPC into granting the increase, Howell said.

Howell wonder why VEPCO's supplier is short of gas when the Washington Gas Light Co., which serves Northern Virginia, reports it has "plenty of gas."

The senator said while the embargo is only for two years, apartments installing electricity—with VEPCO also provides—would "be forced to heat and cool by electricity and the people forced to pay the higher rates not only this year, but for the next 50 years," the estimated life of the dwelling.

Howell produced a Norfolk architect, Irwin Kroskin, who testified that natural gas "provides the lowest operating costs of all fuels available." Kroskin said the VEPCO proposal would affect about 7,500 Tidewater units, many of them for low-income persons.

He said the Federal Housing Administration generally will not approve low-cost housing loans which feature electrical heat unless there is no other source available. He said natural gas, while a more expensive installation, is 25 to 50 percent cheaper to use than electricity.

Crutchfield said by 1971–72 VEPCO expects to have enough storage facilities and the means to convert liquid propane gas to natural gas to alleviate the shortage.

Howell said the SCC should either deny VEPCO's request, compel VEPCO to appear before the FPC and demand additional gas supplies, postpone the hearing until the FPC rules or "order VEPCO to divest itself" of its natural gas interests and concentrate on electricity.

CAN A BLACK MAN GET A FAIR TRIAL IN THIS COUNTRY?

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 15, 1970

Mr. DIGGS. Mr. Speaker, under unanimous consent, I include the following item from the New York Times Magazine of July 12, 1970:

CAN A BLACK MAN GET A FAIR TRIAL IN THIS COUNTRY?

(By Haywood Burns)

"I am appalled and ashamed that things should have come to such a pass that I am skeptical of the ability of black revolutionaries to achieve a fair trial anywhere in the United States.

"In large part the atmosphere has been created by police actions and prosecutions against the Panthers in many parts of the country. It is also one more inheritance from centuries of racial discrimination and oppression."

When Yale president Kingman Brewster recently expressed these doubts about the possibility of a black revolutionary receiving a fair trial in the United States today, there was an immediate outcry. The judge in the New Haven Black Panther trial took Brewster to task for his statement, and the Vice President of the United States had some rather unkind comments for the Yale president. There are, however, more and more persons who not only share Brewster's doubts as they apply to revolutionaries but also wonder whether any black man in America can receive a fair trial.

Given the special relationship blacks have had to the law since they were brought to this country, such doubts are more than reasonable. Whereas white Americans are accustomed to viewing the law as an historic vehicle through which liberties have been progressively expanded, black Americans have experienced law in quite another fashion. From the very first, American law has been the handmaiden of American racism. It has been the means by which the generalized racism in the society has been made specific and converted into the particularized policies and standards of social control.

So many of the milestones in the early history of liberty in this country are emblazoned with the exception: "But not for blacks." Thus, black people cannot view the Declaration of Independence, the Constitution or Jacksonian democracy in the same lofty manner as many who see them as triumphs of liberty; for the early Americans who sought freedom so assiduously for themselves, at the same time so cruelly denied it to others in their midst.

For so much of the past, the law rather than being a tool for expanding liberty, has been an implement for constricting, downgrading and narrowing the possibilities for blacks. It was the law which institutionalized American chattel slavery (by making black bondage life-long and later hereditary). It was the law which provided the onerous slave codes to govern in oppressive detail the lives of millions of blacks until their emancipation, and which returned to perform the same function through the notorious Black Codes after emancipation. It was with the law that the architects of segregation built a Jim Crow society which is still intact a decade and a half after Brown v. Board of Education and more than a century after the Emancipation Proclamation.

For long stretches of American history in many parts of the country, black people lacked any legal personality whatsoever. By law they were excluded from bringing lawsuits to protect their rights. There was no legal recourse for injury to themselves or their property. They were not even allowed to take the witness stand to testify in cases where the interests of white persons were involved. Nor were they permitted to serve on juries. In the criminal area—it is the criminal case that I shall concentrate on in this article—the penalties the law prescribed for blacks were often different from those prescribed for whites for the same offense.

Perhaps the most striking example of the latter disparity is the way in which certain jurisdictions reserved the penalty of sexual mutilation for blacks and Indians accused of interracial sex crimes. A reading of the statutes provides insights into the psychosocial pathology of white America—of its fear of letting black men be men; of its need to deprive them of their manhood; of its artfulness in employing the law in this base service. As recently as the mid-nineteenth century, white men sat in the Kansas Legislature and introduced, debated and passed legislation which provided that the penalty for any black convicted of attempting to compel a white woman to marry should be castration "by some skillful person," the cost of such a procedure to be charged to the convicted person. The penalty for corresponding acts by white persons was "confinement and hard labor not less than five years."

The Agnews and the present-day guardians of the American judicial system often have little patience with such discussions of the past. References to past legal unpleasantness, at best, are seen as irrelevant diversions from the present point, and at worst, as inflammatory devices which hinder a cool, contemporary and pragmatic approach to the closing of what are seen as minor gaps in the legal system. The fact that the explicit racial distinctions have for the most part been removed from the statute books, and that, in a formal sense, race has ceased to be an articulated ground for judicial decision, is for many sufficient proof that our avowedly neutral system of justice is both neutral and just.

This impatience with history would be justified if America had, in fact, somehow accomplished the impossible task of severing the past and completely exorcising the demons of old. However, in truth, the past of the American legal system is inextricably bound up with its present. Many of the same forces which kept blacks out of the courts or imposed harsher penalties on them in the past are at work today, militating against any black man receiving full justice in an American court.

The barriers to fairness are basically of two kinds: (1) personal—those related to the racial views and attitudes of persons responsible for the day-to-day administration of justice; and (2) structural—those related to the nature of our legal system itself, its procedural rules and substantive doctrines. Sometimes the barriers are a hybrid combination of both.

The manifestations of racism in the legal system today may be more subtle than many of those of the past, but they are not necessarily less pernicious. As their cases make their way through the courts, black lawyers and litigants must still often sustain personal indignities from biased judges and other court personnel. Despite United States Supreme Court disapproval of the practice, it is still not uncommon to find judges and prosecutors who fail to use the courtesy titles "Mr.," "Mrs." or "Miss" when addressing black defendants, and in some cases when addressing black lawyers. Similarly, normally expected courtesies often fall away when court attendants, clerks, bailiffs and marshals find themselves dealing with blacks.

Recently, I appeared with two other black lawyers before a Federal judge in the South, challenging employment discrimination against our black clients. Early in the legal proceedings, much to his consternation, we had taken exception to the judge referring to our clients as "nigras." At the very beginning of the trial itself, the judge told us in no uncertain terms that "nigra" was listed in his dictionary as a regional pronunciation for "Negro" (he did not point out that it is a *white* "regional pronunciation"), and that for the balance of the proceedings he and anyone else in the courtroom could use the term. By instant judicial decree we then had become nigra lawyers pressing the claims of

nigra clients in a white man's court. A corollary of the judge's pronouncement was that we were not to use the term "black" in referring to our clients and the racial community from which they came, since it was not the term traditionally used in "our jurisprudence."

This is by no means to suggest that what we are contending with is exclusively a Southern phenomenon. Daily, in courts throughout the country, black and poor defendants suffer the humiliations of a legal system which refuses to accord them full recognition of their dignity as human beings. In February of this year, Judge John M. Murtagh, presiding at the New York Panther conspiracy trial, ordered the pretrial hearings recessed and the defendants remanded to jail until all of them gave him a promise that they would deport themselves at the hearings in a manner in keeping with his standards of "good conduct."

A group of lawyers from the National Conference of Black Lawyers challenged the constitutionality of Judge Murtagh's action by petitioning for a writ of *habeas corpus* in the Supreme Court of Queens County, the area where the defendants were being held. When the defendants refused to comply with Judge Murtagh's demand, it appeared that they would be jailed indefinitely, awaiting trial. The *habeas corpus* action of the black lawyers on their behalf was something of a psychological victory for the Panther defendants because it enabled them to get back into court—in another jurisdiction—to carry on their struggle without having had to comply with the demands of the New York County trial judge.

However, when the 11 defendants were led into the courtroom for the argument on the petition they found that no chairs had been provided for them next to the counsel table. They were told to sit on the floor. They did so slowly, reluctantly; only the tensing of their bodies and their facial expressions betrayed their controlled fury. All this was demeaning for the proud young black men, but no less so for "the dignity of the court." Eleven might be considerably more than the average number of defendants in a criminal case, but not so many more that the largesse of New York State was incapable of providing seats for them.

Outside courtrooms the clerk's office is an area where personal attitudes can impair fairness. Lower-level clerks are often extremely powerful persons in the bureaucratic machinery of justice and they can use this power in an obstructionist and hostile manner when they do not like the people or the issue involved. This is seldom blatant, but can be seen in differences in flexibility and cooperativeness, and in the way normally straightforward matters can suddenly become complicated—as, for example, with the simple act of incorporating an organization or group when that group happens to have the word "black" in its title.

Biased judges use procedural devices and their judicial discretion to avoid ruling in favor of blacks when the legal mandate in their favor is clear. This is true in a wide variety of areas, but perhaps most obviously with many Southern judges in civil-rights cases. In general, judicial or administrative discretion can be used to cloak racism in sentencing, parole and probation.

Unexpressed racial bias creeps in to pollute the process—North and South—without fear of being exposed or proved. While it may not always be possible to show the bias in an individual case, an examination of statistical patterns demonstrates the disparity in treatment received by black and white persons convicted of crime. It is impossible to determine to what extent disparities are related to individual bias and to what extent they flow from a built-in systemic inequity, but there can be no argument with the fact of the disparity.

Blacks usually receive longer prison sentences than whites for most criminal offenses. A study of persons convicted of burglary and auto theft in Los Angeles County, most of them first offenders and unskilled laborers, revealed that on the average whites were treated much less severely than blacks. Forty-five per cent of the whites and 27 per cent of the blacks were given sentences for these crimes of four months' imprisonment or less, or probation; 42 per cent of the whites and 47 per cent of the blacks received four to nine months; and 13 per cent of the whites and 27 per cent of the blacks got 10 to 20 months.

A 1951 study showed that the average number of months served before release in all the states was 25 for blacks and 20 for whites. The disparity was greatest in the West and the Northeast. Proportionately about 10 to 14 percent more whites than blacks are annually "released conditionally" or granted some kind of parole. This racial disparity in the granting of parole helps to keep the percentage of blacks in the prison population high. According to reports in National Prison Statistics, blacks comprise about one-third of all prisoners, though they make up only about 11 per cent of the general population.

Some of the most glaring disparities occur in sentences imposed for capital crimes. According to the Bureau of Prisons, 3,857 persons were executed in the United States between 1930 and 1966; 53.5 per cent of these were black, 45.4 per cent were white and 1.1 per cent were members of other minority groups. Not only is it less likely that a white person will be sentenced to the electric chair, gas chamber, gallows or firing squad, but the workings of executive and administrative discretion are such that, once condemned to die, a white person is more likely to have his sentence commuted to life imprisonment by a governmental executive board of pardons or similar agency. Marvin E. Wolfgang, the noted criminologist, reports that among those condemned to die, between 10 and 20 per cent more blacks than whites are actually executed.

White America still reserves special penalties for blacks convicted of sex crimes—especially interracial sex crimes. National Prison Statistics shows that of the 19 jurisdictions that have executed men for rape since 1930, almost one-third of them—six states—have executed only blacks. There have been some years in which everyone who was executed for rape in this country was black. Detailed state-by-state analysis has shown that the discrepancy in death sentences for rape is related to the race of the victim.

Blacks raping blacks is apparently less serious than whites raping whites, and certainly less serious than whites raping blacks. But the black man today convicted of raping a white woman can be as certain of receiving the harshest treatment as was a Kansas black convicted of an interracial sex crime in 1855. For example, in Florida between 1960 and 1964, of the 125 white males who raped white females, six—or about 5 per cent—received death sentences (four of these involved attacks on children). Of the 68 black males in the same period who were convicted in Florida of raping black females, three—or about 4 per cent—received death sentences; and this when in two cases the victims were children. However, of the 84 blacks (same period, same state) convicted of raping white women, 45—or 54 per cent—received the death sentence; only one of these cases involved an attack on a juvenile. None of the eight white men who raped black women was sentenced to death.

Although there have not been sufficient detailed statistical analyses, available evidence indicates that black youths are more likely to be condemned to death and executed than the children of white parents. One study has shown that between 1950 and 1953, nine teen-agers were executed in the United States—seven black, two white. In 1954, 10 teen-agers were executed—seven in Georgia, two in New York, and one in Florida. All were black.

Just as with their elders, black youths can expect a difference in what the system of justice metes out to them and to others. The President's Commission on Law Enforcement and the Administration of Justice found that almost all youths committed acts for which they could be arrested and taken to court. However, the commission also found that the likelihood of a youth being arrested and taken to court varied according to where he lived. Juveniles from the nation's ghettos were much more likely to be arrested as delinquents than youths from white suburbia.

Of course, a good deal of the difference may be attributed to the cold sociological fact that certain kinds of condition of economic deprivation breed more so-called "antisocial" acts. But it must also be attributed to the differences in the way the police and the courts perform. If a suburban youth is arrested, it is more likely that some disposition will be worked out which will not involve incarceration. A ghetto youth will seldom find a policeman cautious about making an arrest merely because the youth is the son of a community leader, any more than in court will his parents be able to provide private counsel, private psychiatrists or to make an impression with personal prestige of their own as their child's fate is weighed in the balance.

Black people distrust the judicial system not only because of what happens to them when they are caught up in its machinery, but because of the failings of the legal system they witness when blacks are the victims. Black people wonder why no arrest was made last winter in Indiana when guards at the Pendleton Reformatory systematically shot unarmed black prisoners engaging in a sit-down demonstration. Black people wonder why there were no arrests in Brooklyn recently when a group of off-duty policemen fell upon and savagely beat Black Panther party members in the halls of the courthouse. Black people wonder why in Chicago—particularly after the Federal grand jury report—no one was arrested for the murderous late-night submachine-gun assault upon nine young Black Panthers. Black people wonder why in Mississippi there was never a murder prosecution of the men charged with snuffing out the lives of James Chaney, Andrew Goodman and Michael Schwerner (the Federal prosecution for violating the civil rights of the three was hardly a sufficient response for so heinous a crime).

Black people wonder why in November 1969, white radicals charged with bombing several New York buildings could have their bail reduced by 80 per cent to a reasonable amount in two days, while Black Panthers have languished in jail under unreasonable bail for 15 months for allegedly plotting to blow up the Botanical Garden.

Black people wonder why white men's juries in Michigan or Mississippi cannot find it in the evidence—or perhaps, even with the evidence, in their hearts—to convict white men for killing unknown blacks in the Algiers Motel in Detroit, or Medgar Evers in front of his home in Jackson. Black people wonder.

Blacks are no longer barred, because they are black, from bringing lawsuits or giving testimony in American courts. They have the legal capacity to give testimony no matter whose rights are involved. However, the weight that testimony is accorded is another matter. British barrister Anthony Lester conducted a study of state courts in the Deep South in 1964 and reported in his

"Justice in the American South" that "whenever there was a conflict of evidence between Negro and white, the judge appeared automatically to believe the white man. On no occasion was a policeman's evidence challenged."

Though this situation may have changed somewhat since Lester made his study, it is the general experience of lawyers who represent blacks—North, South, East and West—that judges and juries seldom accord the testimony of nonwhites the same weight as that of whites. When the issue is one of credibility, one white witness on one side of a lawsuit often cancels out several nonwhite witnesses on the other.

I recently represented some young black defendants who had been stopped by the police in the Bronx, allegedly for an infraction of the traffic laws. Prompted by a racial remark from one of the officers, a verbal duel between the young men and the officers ensued, in which the officers were outfenced. The result was that the young men were jailed on a long string of charges, including resisting arrest and inciting to riot. The defendants, though disturbed by the treatment they received, were not overly concerned about their trial since there had been so many people at the site of the incident who had seen that the most that had occurred was an argument between the police and the defendants.

By way of defense, I put on a large group of these witnesses—all black or Puerto Rican—most of whom did not know the defendants and who had no personal interest in testifying. Despite the disinterestedness of our witnesses and their number, the court chose to believe the policemen, on all but the most serious of the charges, and convicted the defendants. The impact of this lesson in credibility was strong, both on the defendants and on some of the spectators.

One of the defendants indicated to me that some of his worst notions about the workings of American justice had been confirmed and that the lesson he took away from the experience was in the future to resist unwarranted police action directed at himself, since he would probably be charged with doing so anyway. One boy of 11 or 12 who had seen the arrest and been at the trial blurted out to me at its conclusion, "Wow, if that's what happens to you in courts, I ain't gonna stop if a cop ever tells me to stop. I'm gonna run. Those guys didn't do nuthin'!"

It has long been the law that systematic exclusion of blacks from grand and petit juries is unconstitutional. In 1880 in Strauder v. West Virginia, the Supreme Court overturned a state statute which explicitly limited jury service to whites. Nonetheless, jury selection procedures are still such that it is difficult for blacks to obtain juries on which members of their race are fairly represented. Jury-qualification rules, the discretion left to jury commissioners and the lists selected as the source of prospective jurors have resulted in gross underrepresentation of the young, the black and the poor. Legal scholar Michael O. Finkelstein has recently documented the fact of racial exclusion in several Northern communities. His analysis of venire records of persons selected for grand juries in Manhattan, the Bronx and Westchester revealed that Harlem districts with heavy black populations contributed *less* than 1 per cent of the Manhattan veniremen, although they comprised 11 per cent of the voting population.

If there had been a random selection of jurors, it would have been virtually impossible for discrepancies this large to occur. According to Wolfgang and Cohen in their study "Crime and Race," the mathematical probability that the Manhattan grand jury venires in 1967 would have had the racial composition they did have through chance was smaller than the probability of being dealt 24 consecutive royal flushes in an honest game of five-card draw poker. Finkelstein also showed that in Westchester towns with large black populations—Mount Vernon, New Rochelle and Yonkers—blacks were represented almost not at all on the jury rolls.

It is not enough, however, to get blacks on the rolls as prospective jurors, for there still remains means of assuring that they do not serve. Throughout the country in cases involving black defendants, prosecutors use their allotted peremptory strikes to make sure that, so far as possible, the outcome will be determined by a white jury. Thus, legions of black men must still have their fates decided by juries from which members of their own race have been systematically excluded. A prosecutor is not required to give any reason when he uses his peremptory strikes to remove prospective jurors from the jury panel. The Supreme Court, while continuing to hold explicit exclusion invalid, in Swain v. Alabama (1965) has sustained this use of the peremptory strike.

Some of the greatest barriers to blacks receiving fair treatment in the courts today rise not so much from direct racial antipathies as from the structure of the law itself. It is here that the link from the past to the present is most clearly revealed. Historically, the men who made the laws were for the most part explicitly hostile to the interests of the poor and the nonwhite, or at least ignored them. This historic hostility and neglect have brought about a structural inequality through which the law, by its substantive doctrines and procedural rules, works invidious discriminations against the poor and the nonwhite.

Intent is not necessary. Institutionalized bias need never make reference to race or class to remain in its operation and impact highly discriminatory. The structural inequality represents a confluence of caste and class bias in the law in which poor whites are deeply affected, too.

On its face, the structural inequality relates largely to differences in the economic status of individuals, but it has a peculiarly racial dimension since such a widely disproportionate number, of the poor in this country is non-white. Even without bad motives on the part of those who administer the system of justice, the continued application of the legal system in this way is racist because of the way in which it perpetuates past racial wrongs. It battens upon blacks' depressed condition, for which racial injustices were largely responsible in the first place.

A prime example of the structural inequality in the law, and one which results in massive systemic unfairness to the typical nonwhite brought before the courts, is the operation of the money-bail system. Two accused persons can be in otherwise comparable situations—length of time in the community, length of time steadily employed, number of dependents and family obligations—except that one has money and the other does not. Upon arraignment on a criminal charge, one will walk free until the time of trial, the other will be locked up—though both are equally presumed innocent.

The city jails across the country are filled to overcrowding with the poor and nonwhite who must serve weeks, months, and sometimes more than a year in jail before coming to trial. In many cases the amount of bail is nominal—but even $25 is a considerable sum if you have not got it.

Statistically, the jailed defendant has much less chance of being acquitted than the bailed defendant. The defendant who comes to trial from the streets will have had greater access to his lawyer in preparing his defense, and having been at liberty will be able to arrive in court with a demeanor that will not cause those trying him to associate him readily with criminality. Jail in lieu of fines for indigents, creditor-biased consumer law, landlord-biased tenant law, lack of due process before administrative agencies which deal with the poor are but a few further examples of the law's structural inequality.

Many of the revolutionaries of whom Kingman Brewster spoke have identified some or all of these impediments to fairness endemic to the present legal system. They have no expectation of an acquittal when charged with crimes in connection with their political activity, for they know that they face not only the institutional bias against black defendants, but the political animus as well that is reserved for those that are perceived as a serious threat to things as they are.

As far as the legal system is concerned, the question becomes, as it did with Debs and with Sacco and Vanzetti and other unpopular defendants, not so much whether the defendants are guilty or innocent, in the sense of having committed or not committed certain acts, but whether in the present political climate such a determination can be made fairly.

Brewster and persons both in and outside the legal community admit to skepticism on this point. Many black revolutionaries have answered the question firmly in the negative. Having made this assessment of the legal system and their chances within it, many revolutionary defendants have ceased to look upon the courtroom as an arena in which a contest for and against their exoneration is waged, but rather as a platform to expose the failings of the legal system, to educate and politicize a larger public—to indict the system. What has so often been characterized as disruption is often less a calculated attempt to impede the progress of their trial than it is a refusal to sit silent when being subjected to personal affronts.

If such defendants believe someone is lying about them, they say so. If they believe their constitutional rights are being abridged, they say so. If they believe the judge is behaving in a racist fashion, they say so—and in their own terms. This refusal to accept the rules of the judicial game stems from a judgment on their part that the game is fixed.

In their minds there is no reason to sit passively by or to participate cooperatively in a process that is designed for their own destruction. As revolutionaries they believe it is their obligation to behave as revolutionaries wherever they find themselves—in the streets, in the courtroom, in jail. If this conduct is calculated at all, it is calculated to make manifest the latent bias which these defendants believe is rife in the legal system, to bring to the surface the vicious antipathies that would otherwise be masked by the niceties of legal rules.

This approach sometimes results in something of a self-fulfilling prophecy. It has, in fact, often provoked extreme judicial responses which were subversive of the rights of the defendants and in violation of the accepted legal standards of a fair trial.

What is the role of the black lawyer in this whole process? If there is structural inequality in the machinery of justice in this country, is not the lawyer guilty of complicity when he participates in this process? Is he not, in fact, an agent of the system?

The answer has to be that of course he is, but as one activist black lawyer recently said, "The lawyer must be a double agent." He participates in the process, but he can do so in such a way as to maximize the protection and the gains that are possible for oppressed persons under the existing order. He can use the rules of the very system that many of the oppressed are challenging to insulate them so that the can continue to go about the business of challenge.

The legal system has so far proved unable to eradicate racism from American society,

in large part because it is itself so severely tainted with racism. But the law is much too valuable a weapon in the struggle for major social change to be discarded for this reason. Not only can it serve as an insulator of the activist, but experience has shown that through test case litigation it is possible to correct at least some of its structural inequality.

It is unrealistic, however, to speak of major structural change and fairness to blacks in the legal system without examining the social context in which law operates. In many ways, the law merely reflects the larger society. It is unreasonable to think that in a racist society the law, or any institution, can completely transcend that racism. Changing the law involves changing America. In a nation of inverted priorities, misallocated resources and inhumane, materialistic values, it is too much to expect that the law will provide the fairness and justice to the poor and the nonwhite that is being denied them in every other sector of society.

There will not be institutional fairness for blacks in the courts until there is fairness for blacks in America. This relates not only to the structure of the law in terms of its procedural and substantive rules, but to the personal level as well. It is folly to say that ours is a government of laws, not men. Laws are made, interpreted and applied by men—and in America's case by men in a racist society. Ultimately, there is the simple and obvious truth that the judicial system is run by people, mostly by white people and that most white people are racially biased.

The likelihood of the legal process being entirely uncontaminated by bias in any given case is small. Individual blacks can and do win civil suits and individual blacks can and are acquitted of criminal charges, but in an institutional sense in almost all instances the law functions in a discriminatory and unfair manner when blacks (and poor people) are involved.

Can a black man get a fair trial in the United States? If by fair one means free of bias, the answer has to be generally "no."

LAW ENFORCEMENT OFFICIALS NEED "TOOLS" TO WORK WITH

HON. LOUIS FREY, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 15, 1970

Mr. FREY. Mr. Speaker, it has been suggested that the administation is somehow to blame for the lack of new anticrime laws. Any such suggestion is merely an attempt to shift the blame from where it belongs. Since the beginning of the 91st Congress, over 20 major proposals have been advanced by President Nixon to combat crime in this country. Yet, as of this moment, only one of these has been enacted into law, and that one applies only to the District of Columbia. Other legislation has been submitted which comprehensively covers measures against organized crime, terror bombing, drug peddlers, pornography, and provides for increased controls of parole and probation procedures as well as increased assistance to State and local enforcement agencies. No final action has been taken on any of these vital measures. Why?

During the 1960's the crime rate increased seven times faster than the population, with felonies doubling the 1960 rate. The problem is real and is upon us. But law enforcement officials are still not being given tools by the Congress. It is time we acted. It is time we provided the legislation necessary to increase the law and order capabilities of our Nation's enforcement agencies.

SENATOR SCOTT'S POSITION ON CONSERVATION

HON. RICHARD S. SCHWEIKER

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 15, 1970

Mr. SCHWEIKER. Mr. President, on Sunday, September 13, candidates for the U.S. Congress were asked to answer questions submitted by members of the northeast division of the Pennsylvania Federation of Sportsmen's Clubs. John Anderson, president of the northeast division of the federation, presided and asked a number of questions from the chair. These questions and Senator SCOTT's answers develop a number of environmental issues of considerable importance to the Commonwealth of Pennsylvania and the Nation. I ask unanimous consent to have these questions and answers printed in the RECORD.

There being no objection, the questions and answers were ordered to be printed in the RECORD, as follows:

QUESTIONS FROM THE CHAIR TO OUR U.S. LEGISLATORS AND CANDIDATES

Are you in favor of and will you vote for:

1. Uneven flow of cold water from the Cannonsville and Delhi Dams in the Delaware River causing adverse affects on spawning of fish and the use of the water for recreation.

Answer. I have been in touch with the Delaware River Basin Commission to try and find some solution to the uneven water flow and temperature variances resulting from the lack of a uniform water release policy at the Cannonsville and Delhi Dams. These dams are under the administration of the City of New York. Several years ago, Congressman McDade and I were successful in working out an informal uniform flow agreement. Recent fish spawning problems indicate that the City of New York is no longer abiding by this agreement. If the Delaware River Basin cannot stop these uneven releases, I will introduce legislation to correct the problem. I do not intend to permit further harm to the recreation and sportfishing potential of the upper Delaware.

2. Proposed sale of federal lands by the present administration.

Answer. Sale of surplus Federal land may be authorized by an Executive Order by the President. This order need not be ratified by Congress. Under an Executive Order recently signed by President Nixon, each Federal Department and agency head was asked to designate the surplus lands under his control. I contacted Secretary Hickel and received an assurance from him that no National Parks, National Forests, nor Wildlife refuges would be considered surplus. Our wildlife refuges are an important part of our national heritage. I will fight any attempt to sell even one square foot of refuge land.

3. Use of chemical defoliants on our highways, power lines, gas lines, railroads, etc.

Answer. The need for more effective legislation in this area is underlined by my recent experience in the Clavarack Electric Company matter. After receiving a copy of a letter from North East Federation President John Anderson complaining that the Electric Company was spraying valuable game land adjacent to its power lines with lethal chemical defoliants, I contacted Secretary Maurice Goddard of the Commonwealth Department of Forests and Waters, and Secretary Leland Bull of the Commonwealth Department of Agriculture. Neither of these gentlemen had the authority to take specific administrative action to stop the spraying.

In February, 1969, I was the first national legislator to call attention to the threat posed by insecticide, pesticide and herbicide use. High concentrations of DDT and other lethal chemical agents were discovered in coho salmon catches. My warning and subsequent call for Senate hearings produced action. The Senate Subcommittee on Energy, Natural Resources and the Environment held hearings on this danger. The response has been gratifying. Secretary of Agriculture Hardin banned many pesticides and herbicides with a high DDT content. I am working to secure passage of tough new legislation before the end of the Ninety-first Congress. Next year, Federal officials will have the authority to stop dangerous spraying.

4. Atomic reactor plants—in particular the one proposed at Meshoppen, Pennsylvania, on the Susquehanna River.

Answer. I have opposed and will continue to oppose nuclear power plants that pose a threat to the health and living environment of our Commonwealth's citizens. On September 1, in a letter to Glenn Seaborg, Chairman of the Atomic Energy Commission, I expressed my opposition to the construction of the Meshoppen fast breeder reactor as long as regulatory officials felt there was the slightest danger to the public health and safety. I also solicited assurances from the AEC that environmental considerations would be given great weight during the application process—even to the extent of denying the required licenses. Our power generating capacity must be expanded to meet our growing needs but not at the expense of the health and environmental rights of Commonwealth citizens.

5. Make available surplus grain to sportsmen's clubs raising game that is released on land open to public hunting.

Answer. I am in favor of and will vote for any legislation to make surplus grain available to sportsmen's clubs raising game for release on lands open to public hunting. A precedent for this action already exists under Public Law 87–152. On February 11, 1970, I used this legislation as the basis for my request to Secretary of the Interior Hickel that surplus grain be flown in to prevent starvation kills of deer and wild turkeys due to the heavy snow cover over much of the Commonwealth last winter. This is another example of positive action designed to benefit Pennsylvania sportsmen.

6. Strip clear cutting of more of our federal forests to provide food and cover for game.

Answer. On August 12, I wrote to Secretary of Agriculture Clifford Hardin stressing the need for greater recreational concern in the management of our National Forest lands. Too much emphasis has been placed on timber growth and not nearly enough attention has been given to the need for adequate food and cover for deer, wild turkey, and ruffed grouse. Secretary Hardin has directed the Forest Service to plan additional strip clear cutting on Federal Forest lands.

7. More strict water and air pollution laws on a national level.

Answer. Since my election to the Senate in 1958, I have supported tough air and water pollution control legislation. In this Session of Congress, I have introduced air pollution control legislation which would encourage the rapid development of pollution-free vehicles and provide fines of up to $10,000 per day for violators of stationary source

pollution regulations (S. 3466). My water pollution control bill would also provide $10,000 per day fines for violators (S. 3471). This tough legislation hits polluters where it hurts—in the pocket book. I am still waiting for the Democrats to bring these bills before the Senate for a vote.

8. Make the Delaware and Susequehanna Rivers Wild Rivers.

Answer. The National Wild and Scenic Rivers Act divides designated rivers into two classes. Those in the first class are immediately listed as wild and scenic rivers. Rivers in the second class are to be studied for possible future "wild river" designation. Although several Pennsylvania rivers are in the second class, the settled nature of their river basins makes large scale Federal land acquisition both difficult and costly. The natural beauty of the Delaware and Susequehanna Rivers can best be preserved through interstate compacts and the creation of river basin commissions with the power to terminate pollution and provide for recreational development.

9. Susquehanna River Compact and on the (W) amendment.

Answer. As its primary sponsor in the U.S. Senate, I favor the enactment of the Susquehanna River Basin Compact and the coordinated, comprehensive planning for the preservation and enhancement of the Susquehanna, which this Compact would make possible. One fact is unmistakable; further development on the Susequehanna River is unavoidable. All of the forces needed are present to bring it about. What the Susquehanna Compact offers is the mechanism—a Susquehanna River Basin Commission representing equally the three Basin States and the Federal Government—to facilitate Federal-State intergovernmental and interagency cooperation to ensure that the best rewards of coordinated development are realized.

Significantly, the Compact recognizes that the powers which it would grant to the Commission are broad. Accordingly, commensurate public safeguards—including especially the requirement and opportunity for public hearings throughout—are provided by the Compact. As introduced, the Susquehanna Compact legislation makes no mention of any specific project; nor, would its enactment imply any such endorsement.

In cases of potential conflict with other regulatory agencies, I believe it is imperative that the Susequehanna River Basin Commission must retain final authority over water use and quality if the Commission is to carry out in any meaningful way its mandate for comprehensive planning for the preservation of the Basin. Therefore, I favor, and intend to recommend the enactment of, additional language to Reservation "W" which would provide this assurance and protection.

THE 1971 BUDGET SCOREKEEPING REPORT—SEPTEMBER 10, 1970

HON. GEORGE H. MAHON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 15, 1970

Mr. MAHON. Mr. Speaker, the 10th in a series of periodic "budget scorekeeping" reports prepared by the staff of the Joint Committee on Reduction of Federal Expenditures was distributed to Members yesterday, September 14. This report reflects the cumulative actions of the Congress on the President's budget requests—as originally submitted and as revised by him—through September 10.

The report reflects all the actions of Congress—beginning with the actions of each committee as a bill is reported—on regular appropriation bills; on legislation containing so-called backdoor appropriations; on legislation providing for mandatory spending; inactions on legislative proposals to reduce budget authority and outlays—the negative spending proposals; and actions or inactions on revenue producing proposals.

HIGHLIGHTS OF THE REPORT

The "scorekeeping" report is largely satistical and somewhat technical in nature and therefore not easily read. It is essentially for this reason that I am inserting in the RECORD certain factual highlights from the introductory section of the report together with certain summary information prepared specifically for this purpose from the more detailed tabulation contained in the report:

INTRODUCTION TO STAFF REPORT ON THE STATUS OF THE 1971 FISCAL YEAR FEDERAL BUDGET

HIGHLIGHTS AND CURRENT STATUS OF THE 1971 BUDGET

Presidential revisions in the budget

A. New budget authority for fiscal 1971 in the February 2 budget submission was estimated to be $218,030,495,000. By budget amendments, legislative proposals and reestimates (May 19, 1970), the President has increased the estimates for new budget authority for 1971 by $2,698,722,000 to a new total of $220,729,217,000.

B. Budget outlays for fiscal 1971 in the February 2 budget submission were estimated to total $200,771,129,000. By budget amendments, legislative proposals and reestimates (May 19, 1970), the President has increased the estimated budget outlays for fiscal 1971 by $4,571,871,000 to a new total of $205,343,000,000.

C. Budget receipts for fiscal 1971 in the February budget submission were estimated to total $202,103,000,000, including $1,522,000,000 for increased taxes proposed to the Congress. By additional revenue proposals for estate and gift taxes ($1,500,000,000) and leaded gasoline tax ($1,600,000,000) offset by some adjustments downward in his May 19, 1970 reestimates, the President has increased fiscal 1971 estimated receipts by a net of $2,006,000,000 to a new total of $204,109,000,000.

Congressional changes in the budget

A. Budget authority for fiscal 1971:

1. *House* actions to September 10, 1970 on all spending bills—appropriations and legislative—have *increased* the President's requests for fiscal 1971 budget authority by $7,504,735,000.

2. *Senate* actions to September 10, 1970 on all spending bills—appropriations and legislative—have *increased* the President's budget authority requests for fiscal 1971 by $3,260,324,000.

3. *Enactments* of spending bills—appropriations and legislative—to September 10, 1970 have *added* $2,759,172,000 to the President's budget authority requests for fiscal 1971.

B. Budget outlays for fiscal 1971:

1. *House* actions to September 10, 1970 on all spending bills—appropriations and legislative—have *added* a net of $3,222,083,000 to the President's total estimated outlays for fiscal 1971.

2. *Senate* actions to September 10, 1970 on all spending bills—appropriations and legislative—have *added* a net of $2,754,629,000 to the President's total estimated outlays for fiscal 1971.

3. *Enactments* of spending bills—appropriations and legislative—to September 10, 1970 have *added* $1,776,361,000 to the President's total estimated outlays for fiscal 1971.

C. Budget receipts requested by the President for fiscal 1971 requiring Congressional actions total $4,622,000,000:

1. *House* actions to September 10 on revenue proposals total $548,000,000 (including a net of $13,000,000 not requested for fiscal 1971 by the President) leaving a balance of $4,087,000,000 additional revenue increases required to meet the President's revised fiscal 1971 budget requests.

2. *Senate* actions to September 10 on revenue proposals total $1,011,000,0000 (including $693,000,000 not requested for fiscal 1971 by the President) leaving a balance of $4,304,000,000 additional revenue increases required to meet the President's revised fiscal 1971 budget requests.

3. *Enactments* of revenue proposals to September 10 total $516,000,000 (including $194 million not requested for fiscal 1971 by the President) leaving a balance of $4,300,000,000 additional revenue increases required to meet the President's revised fiscal 1971 budget requests.

Facts on the budget deficit

The budget for fiscal 1971 submitted to Congress February 2, 1970 reflected a unified budget surplus of $1.3 billion, made up of an $8.6 billion surplus from the trust funds and a $7.3 billion deficit in the general Federal funds.

The budget for fiscal 1971 as revised by budget amendments, additional legislative proposals, and reestimates, exclusive of any separate direct congressional actions on the budget, as announced by the President on May 19, 1970, reflected a unified budget deficit of about $1.2 billion. Including congressional actions, as announced by the President May 19, 1970, the unified budget deficit was estimated to be $1.3 billion, made up of an $8.7 billion surplus from the trust funds and a $10 billion deficit in the general Federal funds.

These surplus and deficit projections are dependent upon various factors of an uncertain nature, such as:

1. Experience shows that actual outlays are likely to increase over earlier projections—thus increasing the deficit. Since submission of the fiscal 1971 budget in February the President has revised his official outlay estimates upward by about $4.6 billion and Congressional enactments to September 10 have added approximately an additional $1,776 million to estimated outlays for fiscal 1971.

2. The economic slowdown may decrease actual revenues from the amounts projected—thus increasing the deficit. The staff of the Joint Committee on Internal Revenue Taxation estimated last May that revenue collections for fiscal 1971 will be about $3.2 billion less than the administration was then projecting.

3. The revised budget contained about $2,414 million in estimated outlay reductions for legislative proposals to the Congress such as postal rate increases, sales of surplus stockpile commodities, revisions in various Veterans benefits, Medicaid reform, sale of Alaska Railroad, etc. The effective date of the proposed $1,568 million postal rate increases has been delayed by at least six months reducing that saving by at least $784 million (which is reflected as a Congressional increase in spending above); and only $180 million of the $250 proposed surplus sales have been approved. No other actions have been completed. Thus $666 million of these proposed outlay reductions have not yet been acted upon by the Congress.

4. The budget as revised to May 19, 1970 contains receipt estimates from various revenue producing proposals in the amount of

$4.8 billion (including $503 million for trust funds of which $194 million was not requested by the President) which, if not enacted by Congress, will automatically reduce receipts of the Treasury by the amounts estimated—thus increasing the deficit. Congress has enacted, to date, $322 million of the President's new revenue requests plus $194 million in new revenue not requested by the President. This leaves a balance of about $4.3 billion of the revenue requests of the President yet to be enacted or because of the enactment of $194 million not requested by the President a balance of $4.1 billion yet to be enacted toward meeting the President's estimated revenue requirement.

Taking into account Congressional actions to date on the uncertain budget estimates outlined above, and unless pending budget proposals for outlay reductions and additional revenues are enacted, the unified budget deficit for fiscal 1971 estimated by the President on May 19, 1970 to be about $1.3 billion would be increased to about $7.8 billion. Adding the loss of $3.2 billion revenue collections as estimated by the Joint Committee on Internal Revenue Taxation the total unified budget deficit could be as much as $11 billion, made up of a $7.9 billion surplus in trust funds and a $18.9 billion deficit in general Federal funds.

These deficit figures are not projections. They are simply arithmetic computations. Additional and pending actions by the Congress enacting revenue measures or increasing or decreasing expenditures will have a direct effect on any deficit computations. In addition, any increase in uncontrollable expenditures, like interest, or any additional savings made by the Executive will also have a direct impact on the projected deficit.

SUMMARY OF ACTIONS AFFECTING 1971

Mr. Speaker, I include a tabulation summarizing congressional actions and inactions to September 10 on various spending and revenue measures affecting the President's budget estimates. This summary has been compiled from tables 1 and 3 of the comprehensive "budget scorekeeping" report.

The tabulation reflects the effects of congressional actions and congressional inactions in terms of both budget authority and budget outlays. The budget outlay side of the picture has been combined with the actions remaining to be taken on various revenue-producing proposals to reflect the current status of the President's May 19, 1970, fiscal 1971 deficit estimate as that deficit estimate has been affected by congressional actions or the lack of congressional actions to September 10.

It should again be pointed out that the arithmetical deficit figures shown in this summary tabulation are *not* projections; the many remaining actions of the Congress on various spending and revenue proposals which are pending disposition will necessarily adjust these figures up or down as those actions are taken. Furthermore, these deficit figures do not reflect consideration of any shortfall in revenues below those projected in the budget estimates.

The tabulation follows:

FISCAL YEAR 1971 BUDGET SCOREKEEPING REPORT—AT A GLANCE AS OF SEPT. 10, 1970

[In thousands]

Spending authorizations	Changes from the Budget: Budget authority: House	Budget authority: Senate	Budget authority: Enacted	Budget outlays: House	Budget outlays: Senate	Budget outlays: Enacted
1. Appropriation bills	−$745,549	+$1,368,844	+$440,310	+$226,150	+$1,044,500	+$352,550
2. Legislative bills with "backdoor" spending authorization	+6,892,851	+224,851	+974,851			
3. Mandatory-type spending authorizations in legislative bills (pay, pensions, etc.)	+418,433	+882,629	+560,011	+2,061,933	+926,129	+639,811
4. Legislation affecting proposals to reduce budget authority and outlays—on which final action has been taken	+939,000	+784,000	+784,000	+934,000	+784,000	+784,000
5. Total changes from the budget as of September 10, for spending authority (the sum of items 1, 2, 3 and 4)	+7,504,735	+3,260,324	+2,759,172	+3,222,083	+2,754,629	+1,776,361
OTHER ADJUSTMENTS AFFECTING THE BUDGET AND THE DEFICIT						
6. Legislative proposals to reduce budget authority and outlays—on which no congressional action has been taken				+$450,564	+$665,564	+$665,564
7. Balance of $4,622,000,000 in revenue requests still pending enactment				+4,074,000	+3,611,000	+4,106,000
8. Impact of spending changes and remaining unmet revenue requests on the deficit (the sum of items 5, 6, and 7)				+7,746,647	+7,031,193	+6,547,925
9. Presidential deficit estimate May 19, 1970, excluding congressional actions				1,234,000	1,234,000	1,234,000
10. Total deficit—potential without further congressional changes in revenues or spending (the sum of items 8 and 9)				8,980,647	8,265,193	7,781,925

MR. H. I. ROMNES: A MAN OF COURAGE AND DISTINCTION

HON. JOHN E. HUNT

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 15, 1970

Mr. HUNT. Mr. Speaker, among the many hundreds of college and university commencement exercises across the Nation last June is one to which I would like to pay special attention. St. Louis University was singularly unique, to my knowledge, in choosing as its commencement speaker a businessman—a man of courage and distinction in the business community, the chairman of the board and president of the American Telephone & Telegraph Co., Mr. H. I. Romnes.

While I will not consume the pages of the RECORD to recite the full text of Mr. Romnes' address, I do want to emphasize and single out several of the very pertinent and poignant passages of his address which he imparts with the force of his convictions.

As to the times in which we live:

If there is virtue in times of stress like these, it is that they force us to examine previously unexamined assumptions and test the reasonableness of what we have all too comfortably taken for granted.

Mr. Romnes' address, while recognizing problems in society, refuses to yield to words of despair:

"Crisis" is a word that I am most reluctant to use, even to describe so perilous a passage in our history as the present one—first of all because we have had so many "crises" in recent years that turned out to be simply problems and, second, because, however much the word might satisfy our own yearning for a unique place in history, it implies that somehow events have gone beyond our capacity to manage them. This I don't believe has happened and—what is more—I don't believe we are going to let it happen.

The challenge is implicit. He said:

What I do understand . . . is what every American must understand by now—and that is that we are a deeply troubled and divided country and that we had better begin to ask ourselves what is happening to our country before it is too late.

The remedies he suggests are simple, yet vitally important:

We need to restore confidence in our ability to solve our own problems.

We need . . . to restore some measure of rationality to the processes by which Americans make up their minds on great issues and on small.

And we need to communicate.

Confidence:

For me, confidence that we can and conviction that we shall surmount our present difficulties comes from the reminder that this is not the first time in our history that we have been a deeply divided country.

Mr. Romnes cautions as to the limits of the passions of youth who want to change things:

What I would like to suggest is that there are limits to passion, however noble the cause that inspires it. Sooner or later, when the last demonstration is done and the shouting is over, someone is going to have to apply himself to the hard tasks of building the new and better world you want.

He warns that the ideals of today's college-age generation will not be realized merely by taking them for granted:

The achievement of your generation's aims, much as they depend on the conviction with which you pursue them, will depend even more on the plain down-to-earth competence you bring to the job . . . The quality of our society will increasingly depend on the quality of its individual components—the skills and energy that each of us brings to his chosen field of endeavor, the sense of responsibility that each of us brings to the tasks of citizenship.

Understandably, the role of business which Mr. Romnes envisions lies at the

heart of our way of life and our ability to meet the challenges faced by our society:

Business will in fact provide opportunities to shape the future as great or greater than some other pursuits that currently appear to offer more of the satisfactions of self-dramatization. . . . And it is business, I believe, that will provide the central testing ground of our ability—the ability of all Americans—to work together in dignity and mutual aspect.

He suggests that there is more to communication than merely perfecting the technical means:

There is no more disturbing aspect of our times than that we appear to have lost the capacity to listen to each other with a decent respect for one another's opinions.

There is no doubt, as Mr. Romnes observes, that communications involves risks. He said:

There is the risk that in the process we might discover that the world is a little more complicated than it seemed. There is the risk that we might discover frailties in our most firmly held convictions. And, finally, there is the risk that in seeking to change others, we may be changed ourselves.

Mr. Speaker, we certainly need more men of Mr. Romnes' kind who will apply themselves to the pressing matters of the day without fear or favor.

METHADONE AN ANSWER TO DRUG ABUSE

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 15, 1970

Mr. MOORHEAD. Mr. Speaker, for the longest time, heroin addiction was almost a terminal affliction. Although heroin of very poor quality, or in excessive amounts, sometimes kills a user directly, more often than not, the heroin addict dies a hundred deaths trying to feed his habit, which never stabilizes but always grows.

The drug addict is responsible for much of today's street crime, the muggings, the petty robberies, and others which he must engage in, in order to get the money to pay for his daily craving for drugs.

The costs to the community, his family, and himself that the addict creates are incalculable. Suffice it to say that full-blown heroin addiction is debilitating to both the individual, those around him, and the place where he plys his habit.

Recently, there has been success in treating addicts using the substitute drug, methadone. This inexpensive, synthetic narcotic, when taken properly allows the addict to be weaned from heroin and eventually offers the hope of an addiction-free life.

The August 21 edition of the Pittsburgh Post-Gazette contains an excellent article on the work being done in my city with addict rehabilitation.

Much of the effort in Pittsburgh is being carried out under the guiding hand of Dr. Charles Burks, the man responsible for Black Action Inc.

Black Action Inc. is a community organization which has been working directly with addicts in their own neighborhoods.

It has been a lifesaver, in more ways than one, for many Pittsburghers who were chained to a drug habit.

Burks and Black Action Inc. have been using methadone in their rehabilitation program.

Although there is a glimmer of hope in this treatment, it is being hampered by too little hospital space and money and too few trained personnel, all of which are needed for a successful drug rehabilitation.

I include this article in the RECORD for the edification of my colleagues:

METHADONE AN ANSWER TO DRUG ABUSE

(By Eleanor Adamets)

Thanks to a recently legalized drug called methadone, and to the pioneer spirit of the city's two Methadone Maintenance Programs, nearly 300 hard-core heroin addicts in Allegheny County have been able to "kick" their habits.

Dr. John Ekstrand, director of the program at Western Psychiatric Institute and Clinic in Oakland, describes the success of the system as "approaching the miraculous."

"In two to three weeks, we see dramatic changes take place in the addicts," he said. "They talk about football, complain if they miss breakfast, and want to see their families."

In less than a year after starting to take methadone, many of the addicts in the two programs are now holding steady jobs. Most are reunited with their families, and some have even been able to return to school.

"The meth is a beautiful thing—I'm starting to dream again about owning my own business and sending my son to college someday," said one middle-aged former addict from the Hill District.

Addicted to heroin for more than 20 years, he now holds a full-time job and has been spreading the word to his addict friends on the Hill about the methadone program at Western Psych.

Another addict, a 25-year-old father of three children who started using heroin nine years ago while stationed in Germany with the U.S. Army, is planning to enter college this fall.

"For me, it's like being born again," he said. "Since I started taking methadone, 'chasing the bag' is all over. Now life means a lot more to me and my family."

"We believe heroin addicts should be rehabilitated, not incarcerated," said Annette Green, administrative assistant at Manchester's Black Action, Inc., the largest methadone treatment clinic in the state.

"Immediate 'cold turkey' withdrawal isn't the answer," she added. "What addicts need is medical help and a long period of intensive counseling."

Both Black Action's program and one at Western Psych base their treatment of addicts on the concept that heroin addiction is a disease that can be medically treated with success like many other physical disorders.

Dr. Charles Burks, the "guiding spirit" of Black Action's program for the past two years, began treating addicts with methadone out on the streets of the Northside more than a year before funds, facilities or staff were available.

"We just can't pray heroin addiction away—if we could, we'd all be praying," he said. "Methadone is the best answer we've come up with yet, and it does work."

The Manchester program treats about 250 out-patients a day at their clinic. But, in Dr. Burks' words, "We're not even scratching the surface of the problem."

"We've got another 250 addicts on our waiting list now, and they'll have to wait 10–12 months before we can treat them—we just don't have the space or staff to handle them all."

Dr. Burks speculates there are as many as 10,000 hard-core users of heroin (those physically dependent on the drug for two years or more) in the country. He estimates the number of "occasional users" to be as high as 25,000.

Partial explanation of Black Action, Inc.'s problems lies in the nature of the methadone treatment.

Methadone, a synthetic narcotic legalized by the State Legislature only last January, blocks the euphoric effects and the physical craving for heroin if an addict receives his daily "stabilized" dosage in liquid form mixed with orange juice.

But, before an addict can come to the out-patient clinic for methadone, a 4–6 week period of hospitalization is necessary to "detoxify" him from heroin and to "stabilize" him at his individual methadone dosage level.

Only nine hospital beds (seven at St. John's Hospital and two at Allegheny General) are available at any one time to admit new patients into Black Action, Inc.'s program.

The shortage of hospital beds, plus a shortage of funds (their annual budget is about $160,000), staff, and space accounts for the long list of untreated addicts trying to be admitted into the program.

The Western Psych program treats 43 out-patients daily, but has only four beds at the hospital available to admit new patients. Forty-eight addicts are already on their waiting list.

Unlike the Black Action program, however, the program at Western Psych has an annual budget that approaches $1.7 million. In an almost unique example of "the university following the lead of the ghetto," it has patterned much of its program on the methods used at Black Action.

But, even with more money, the Oakland center faces some problems stemming from the refusal of ward nurses in May to distribute methadone to addicts because it disrupted normal ward activities.

Since then, the program has been staffed with its own nurses and tucked away into two tiny rooms on the ninth floor of the hospital. The quarters are cramped, but the addicts are free to come in for their methadone without disturbing other patients.

Within the near future, Western Psych hopes to acquire a house in the Oakland area that will also serve as a counseling center for addicts much like the Juniata Street treatment center of Black Action, Inc.'s program.

Regardless of the difficulties both programs face, the results seem encouraging to the doctors in the programs.

Dr. Ekstrand, who is also the staff psychiatrist for Black Action, Inc.'s program, said that in the seven years since methadone was first used to treat heroin addicts in New York City, no adverse effects from the drug have been reported.

According to both Dr. Ekstrand and Dr. Burks, however, there is no way to determine how long an addict must keep on taking methadone.

Much like a diabetic must depend on insulin to maintain proper metabolic balance in his body, a heroin addict may have to depend on methadone for the rest of his life to satisfy his craving for heroin.

But, as one addict says, "Compared to supporting a $50 a day heroin habit, the 15 cents a day it costs for methadone is a real bargain!"

THE SOVIET UNION AND THE PALESTINIAN GUERRILLAS

HON. JAMES R. GROVER, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 15, 1970

Mr. GROVER. Mr. Speaker, during the past summer, I was pleased to have working in my office as a congressional intern, Mr. Robert Lifson, of Huntington, N.Y. In addition to office and seminar study assignments, Mr. Lifson did considerable research in matters concerned in the Middle East. He prepared, prior to the current aircraft hijackings, a scholarly essay entitled "The Soviet Union and the Palestinian Guerrillas." In view of the worldwide concern over the aircraft hijackings by Arab guerrillas and the timeliness of his study report, I am submitting it for the interest of the Members:

THE SOVIET UNION AND THE PALESTINIAN GUERRILLAS

(By Robert Lifson)

Of all the aspects of the current tensions in the Middle East, certainly the one that is least understood is that of the relationship of the Soviet Union to the Palestinian guerrillas. The guerrillas, due to their recent and forceful addition to the complexities of the Middle East, have captured the hopes and imaginations of the Palestinian and Arab peoples. Thus, they are a potentially powerful force, and as such, they are a factor which must be carefully considered by the policy makers in the Kremlin.

In order to understand the relationship between Moscow and the commandos, one must have some idea of what the Soviet Union hopes to accomplish in the Middle East. Only the men in the Kremlin know exactly what these goals are. We in the West can only speculate. At one extreme is the long-run maximum objective of the U.S.S.R. which would most likely be the replacement of all Western political, military, economic, and cultural ties with the Middle East by the U.S.S.R. In other words, the Soviets would desire the virtual communization or Sovietization of the whole area. Realistically, this objective does not seem possible. Perhaps a more reasonable long range goal would be to attempt to become the predominant, but not sole, influence in the region. In the short run, the Russian goal would seem to be one of settling the issues left over from the June war of 1967. More importantly, however, the Russians want the Suez Canal open to their shipping so they can continue and increase their penetration of the Middle East, the Horn of Africa, and eventually, the Persian Gulf and Indian Ocean areas, where a Western presence is in decline. One consideration above all else prevents Moscow from militantly trying to achieve these goals and that factor which the policy makers in the Kremlin must consider is the possibility of a nuclear confrontation with the United States. To the Russians nuclear war must be avoided, and any scheme which could conceivably lead to a nuclear exchange with the United States is approached very cautiously.

The emergence of the Palestinian guerillas as a vital force in the area has not necessarily facilitated the obtaining of these Russian objectives. The common goals and ideology of all the guerilla organizations are readily evidenced in the Palestinian National Covenant which the Palestinian National Council accepted. From this document one can see that the guerillas are not communist, although much of what they say and do, have Marxist-Leninist (and to some extent Maoist) strains. However, many people in the West are ready to dismiss the Palestinian commandos as communist fronts; in much the same manner that Nasser's Arab socialism was criticized as being a prelude to communism. These people do not realize that the ideology of the guerrillas is composed of two parts; Arab socialism and Palestinian nationalism. Authorities on the Palestinian problem have stressed that Arab nationalism is not conducive to communism.

The Palestinian organizations have realized that they are barely united as to the means in which to achieve their common goal of liberating Palestine, let alone deciding the future of a liberated Palestine. To state openly the ideology and politics of a liberated Palestinian state, before the existence of such a state is a reality, could only serve to destroy what little unity there is now. To avoid such a possibility article nine of the Palestinian National Covenant states, "doctrine, whether political or social or economic shall not occupy the people of Palestine from their primary duty of liberating their homeland. All Palestinians constitute one national front and work with all their feelings and spiritual and material potentialities to free their homeland."[1]

The position of the Palestinians is a very nationalistic one. They claim that "Palestine is an Arab homeland, bound by strong nationalistic ties to the rest of the Arab countries which together form the large Arab homeland. Its boundaries are those at the time of the British Mandate and is a regional indivisible unit".[2] Futhermore, article seven states that "Jews of Palestinian origin are considered Palestinians if they are willing to live peacefully and loyally in Palestine".[3] As one can see, the Palestinian groups have a strong desire for unity. The Soviet Union has also expressed a desire to see the Palestinian guerrillas unified, but for entirely different motives. The Russians would like to see the united guerrillas used as an auxiliary force by the Arab states. The guerrillas see their unity as a means of using the Arab states as bases from which they hope to liberate their homeland. Although it would be impossible to say that the guerrillas are not affected by Marxist-Leninist ideology, one must be cognizant that it is on subjects such as anti-colonialism, anti-imperialism, and methods of liberation that the guerrillas take a Marxist-Leninist, and sometimes Maoist ideological approach.

Although Arab marauders have been raiding Israel since the 1949 armistice agreements, it was not until the Egyptians decided in 1955 to aid and support raiders in attacks on Israeli territory that these fedayeen caused the Israelis to become concerned. Eventually these incidents supported by the Egyptians prompted the Israeli thrust across Sinai in 1956. The presence of U.N. emergency forces in the area immobilized guerilla activity until 1964 when the Arab League sponsored the formation of the Palestinian Liberation Organization, headed by Ahmad al-Shuqayri.[4] The fact that Israel had planned the diversion of the waters of the Jordan River at this time makes one wonder as to the reason why the Palestine Liberation Organization's came into being. The U.S.S.R. adopted a rather cool even hostile attitude to the guerillas and the P.L.O., at this time. The Soviets were quite disdainful of Ahmad al-Shuqayri and his pro Chinese leanings. The Soviets did not accept the idea of popular war against Israel. They tried to discredit the guerillas by referring to them in *Izvestia* as "mythical divisionary groups" and the Russians even went so far as to imply to the Israelis that the guerillas were a "tool of Western intelligence agencies".[5]

Footnotes at end of article.

The June war changed Moscow's attitude somewhat. The war and the failure of the Palestinian Liberation Army discredited Shuqayri, whose downfall in December of 1967 was welcomed in Moscow. However, any hopes that Al Fatah's leader Yasser Arafat might have a better understanding of the political situation were frustrated. After the war the guerilla movement grew and splintered into many little bands. By as early as the Fall of 1967 practically every national ideological current in the Arab world had sponsored some sort of fedayeen organization.[6] The growth of the guerillas had been increasing gradually since the end of the war and had made some inroads in the hearts of the dispirited Arabs. Yet, it was not until Al Fatah inflicted heavy casualties on the Israelis March 21, 1968 at the battle of Karameh that Al Fatah and the guerilla movement as a whole caught the hearts and imaginations of the Palestinian and Arab people. Israel no longer seemed invincible. Recruitment in guerrilla organizations rose dramatically. This sharp growth in the guerilla movement and its aftermath caused policy makers in the Kremlin to drop their old policy of virtually ignoring the guerillas. On the other hand, any formulation of a new policy would have to take into consideration the various factors which prevent Moscow from fully embracing the guerilla movement, despite their occasional potential political usefulness.

One area where Moscow and the guerillas have divergent views is that of tactics and strategies. Fatah regards the Russians with some suspicion because while the Soviet Union has been indirectly helpful in making available arms and in championing the cause of liberation wars, in general it has also upheld the right of Israel to exist and it has exerted pressure on the guerillas to mute their activities.[7] If the guerillas feel that Moscow is meddling, then it should also be noted that Moscow does not approve of many of the tactics of the guerrilla groups. Several Palestinian organizations feel that because Israel is a virtual "armed state" that there really aren't civilians per se, but rather every component part of society serves some military purpose. Thus, blowing up airlines is justified, in that, El Al is used to bring arms to Israel and it strengthens the Israeli economy, thus increasing Israel's capability for attacking Arabs. If one extends this thinking to its most logical extremes, then there is a rationale for blowing up children in school buses. After all, the children of today are the soldiers of tomorrow, and besides Israeli planes have killed Arab school children too. The Soviet attitude is quite different. E. Primatov a writer for Pravda told an Egyptian newspaper, "We as a government and people support the struggle of the Palestinian people to free the occupied territories. (I think the guerrillas have something else in mind, R.L.) There are, however, various aspects we can not support, for example, we are against attacking civilian airplanes and other civilian objects".[8] There is no surprise as to why Moscow adopts such an attitude.

The Soviet Union, like all sovereign and responsible states realizes that to condone such acts now may prove to be disfunctional in the future, because in the future it may be Russian civilian targets that come under attack by some extremist organization. Still, the U.S.S.R. wants to keep its options with the fedayeen open and therefore, Russia does not condemn the acts, but merely says in a friendly manner that attacks of this nature are not helping the guerilla movement. Indeed the Soviets would like to make the Arabs and the Palestinians more presentable to the West, and attacking airlines impedes this effort.

To be fair one should note that the position of the guerillas is not unanimous on the matter of tactics either. The more mod-

erate guerillas represented by Arafat do not indulge in such cowardly deeds, as Moscow is quick to point out. One popular Soviet periodical notes that "there is not complete unity among the Palestinian organizations themsolves. They often differ as regards tactics, methods, and even the aims of their struggle".[9] Shortly after the hijacking of a U.S. T.W.A. airliner for which George Habash's Popular Front for the Liberation of Palestine claimed responsibility, Pravda on August 29, 1969 said that the Popular Front for the Liberaton of Palestine acts "isolated from all of the other Palestinian organizations".[10]

An even more serious concern of Moscow is the extent of communist Chinese penetration and influence in the guerrilla movement. The possibility of Chinese involvement in the guerrilla movement poses two obvious questions which must be faced. First, is there some sort of communist Chinese involvement in the Palestinian liberation movement? Second, if such a presence does exist, to what extent does it affect Soviet thinking? That the Chinese involvement in the area, however limited in scope, does exist, can not be doubted in light of the facts. In fact, when one considers the distance of the Chinese from the area and their ability to be of assistance, perhaps the Chinese have demonstrated a greater will to aid the guerrillas than the Soviets. More importantly, many, indeed if not all the guerrillas, feel that the Chinese support them more than the U.S.S.R. One prominent Palestinain authority asserted that the "Chinese give the guerrillas one hundred percent ideological, political, and diplomatic support".[11] In fact, even before the '67 war, China was willing to acknowledge Shuqayri and the Palestine Liberation Organization as an Exile Government.[12] The very idea of a people's struggle is a Maoist concept. Certainly the ideas of George Habash of the Popular Front in his recent Life interview have a Maoist color to them. Even the supposedly more moderate Yasir Arafat talks of "victory through a gun's muzzle". In other words the very militancy of the guerrillas is a rejection of Moscow's thinking and an acceptance of Chinese methods. Although the guerrillas' central ideology can in no way be clearly labeled Maoist, they have adopted some of his principles and have incorporated it into their own ideas to form something unique.

Looking at the other side of the coin, one must remember that the Chinese have expressed an interest in the guerrillas. In contrast to his cool reception upon visiting the U.S.S.R., Yasir Arafat was greeted at Peking's airport by Vice President Li Hsiennien and other high officials. In his farewell telegram to Premier Chou En Lai the Al Fatah leader expressed his gratitude for "your support and assistance to our revolution."[13] Many guerrillas claim that they were trained in China and that Chinese assistance has even included arms. Indeed, informed Israelis are only too willing to point out that Chinese arms have been found on captured and dead guerrillas. One can only speculate what the Chinese motive for its actions in the Middle East is. The point is, however, that the Russians regard this Chinese encroachment in the Middle East, despite its limited scope, very seriously, perhaps too seriously. Although the Chinese factor may seem rather minor and illusionary to people in the West, it is very real to the Kremlin.

If the Russians are to deter the Chinese efforts in the guerilla movement, then the Soviets are left with two possible approaches. They can either try to outbid the Chinese and try to prove that they are more revolutionary, or they can condemn and attack all associations with the Chinese as harmful to the movement. At first the Russians seemed to have opted for the second approach. The Chinese had accused the U.S.S.R. of collusion with the U.S. in preparing for a "Middle East Munich." The Russians countered by saying that Chinese propaganda, calling for the redrawing of the maps of the Middle East (at Israel's expense) would only assist the Israelis in prolonging their occupation of Arab lands.[14] The Chinese, in the Soviets' mind, seem to only increase the danger of conflagration in an already explosive situation.

Some Soviets feel that "the Chinese in every possible way encourage their extremist tendencies and push the Palestinians to lead a popular war against Israel and the rotten Arab regimes. They (the Chinese) lead a campaign against a political regulation of the Middle East crisis and try to introduce a split in the anti-imperialist front of the Arab states".[15] The brunt of this verbal attack, on the one hand, is an accusation that the Chinese by interfering in the area are aiding imperialism. On the other hand, it is advice to the Palestinians that the best way to achieving their goals is to unite and to work with the other anti-imperialist, such as the Soviet Union and its client Arab states. China is excluded from this group because its disruptive and disintegrative policies aid the forces of imperialism. The Chinese, then, are one consideration that the Kremlin is mindful of when it deals with the guerrillas. To some extent the Chinese involvement in the area may have the effect of pushing the Russians further to the left. Any Soviet decision towards the guerrillas will be influenced to some extent, by Russia's relations with China and also by Chinese activities in the area.

Of course, the most obvious divergence between the policies of the Soviet Union and the Palestinian commandoes is over the question of Israel's existence. The Russians are eager to remind people in the West that the Soviet Union was to a great extent responsible for Israel's birth. Indeed, not only did the Russians support the U.N. partition plan, and give recognition to the Jewish state, but it was arms from communist Czechoslovakia which enabled the Israelis to successfully defend themselves shortly after the birth of their state. While many of the Arab states have reconciled themselves to this historical reality by reasoning that Israel should exist, but only if the rights of the Palestinians are restored, not all the guerrillas subscribe to such reasoning. The ever growing and popular Popular Front for the Liberation of Palestine led by George Habash claims that Palestine must be liberated from the Israelis. One gets the feeling that, despite Arafat's protestations to the contrary, this goal is the one which all Palestinian organizations are fighting for. According to E Primakov of Pravda, the difference between the viewpoints of the Palestinian guerrillas and that of the Soviet Union is that the "commandoes oppose Zionist existence, we oppose Zionist aggression".[16] This divergence of view is highlighted by the presence of partisan forces which are guerrilla forces of sorts, supported by the Moscow oriented illegal communist parties of Jordan and Iraq. These partisan forces greatly differ from other commando groups in that they do not call for the dismantling of Israel.[17] Clearly, this line of reasoning reflects the attitude of Moscow rather than that of the majority of Palestinians.

One must remember the emphasis the Palestinian National Covenant places on the redemption of an Arab nation state of Palestine. Articles one through eighteen are all justifications for the destruction of the Jewish state of Israel and the replacement of it by an Arab state, or as the more moderate guerrillas say "a multi-racial state" of Moslems and Jews. Thus, Israel's existence and Russia's acknowledgment of Israel's right to exist is one fundamental issue obstructing better relations between the Russians and the guerrillas. It is interesting to note that the Chinese have no such problem, as they had nothing to do with Israel's creation nor have they even given recognition to Israel.

Since the June War of 1967, the question of Israel's right to exist has become a real point of divergence between the guerrillas and the U.S.S.R. Every major peace plan presented to date has always implied if not demanded that the state of Israel be guaranteed its right to exist. The entire question of a peace settlement poses a problem to Moscow with respect to its relations with the guerrillas. While the Arabs (Palestinians included) are cognizant of the role played by the U.S.S.R. in the formation of Israel, they tend to regard the Russians as true friends who are just beginning to realize their mistakes of the past. They hope that the Russians will try to rectify their past mistakes by future actions. Whether the U.S.S.R. is following such a line remains to be seen. If the Soviets are sincere about achieving a just and lasting peace in the Middle East, then they will have earned the undying hatred of the guerrilla groups. Even Soviet talks of peace raise the suspicions of the Palestinians. However, one should note that at present the Soviets have not been able to agree with the West on any peace formula and have only presented peace plans which have proven unacceptable to Israel and Washington. This type of situation is highly beneficial to the Palestinians, as it aids their cause by keeping the tension in the area high, by giving the guerrillas and the Middle East crisis a great deal of publicity, and most importantly it gives the Palestinians a sense of national identity and purpose. These benefits are only derived as long as the guerrillas prove useful to the Arab states in their endeavor to regain the occupied territories.

The official Soviet line regarding peace between the Arabs and the Israelis usually refers back to the U.N. Security Council Resolution of November 22, 1967. The Soviet Union's proposals proceed from the premise that Israel on the one hand, and the U.A.R. and the other Arab countries which would take part in the peace settlement, on the other hand, must be ready to abide by all the provisions of the November 22 resolution. Thus, both sides must reject the possibility of gaining territories by war and they must recognize the necessity of establishing a just and reliable peace in the Middle East in conditions in which every state in the area would be able to enjoy security.[18] The U.N. resolution of November 22, 1967 involves basically the following principles: Israeli withdrawal from the occupied territories, termination of all claims of a state of belligerency and the recognition of the territorial integrity of all states in the area, and their right to live within secure and recognized boundaries free from the threats or acts of force. In addition the resolution affirmed the necessity for a guarantee of freedom through international waterways in the area, a just settlement of the refugee problem, and the guarantee of the independence of every state in the area through measures including the establishment of demilitarized zones.[19] To the Palestinians this resolution is not acceptable. While it does recommend the necessity of resolving the refugee problem, no specific solution is suggested, and on the other hand, it does seem to be an international guarantee of Israel's existence, which although not binding on the guerrillas would nonetheless make their struggle more difficult.

Whether Russia is sincere in her support of peace in the area is a debatable point, but the fact that both the U.S. and the U.S.S.R. talk about resolving the conflict worries the guerillas. Many Palestinian guerrillas fear that the Russians really do want peace because they feel that the Soviets are afraid of a nuclear confrontation, that compromise while not acceptable to the Pales-

Footnotes at end of article.

tinians because one of the concessions is sure to be a guarantee for Israel's existence, may be most convenient for the Russians, and finally, the Palestinians fear that the U.S.S.R. and the U.S. are coming closer together on the idea that stability is necessary in the area.[20] Even more distressing to the guerillas is the Soviet approach to a peace formula. Despite all the talk about a "package deal", the Soviet proposals call first for a withdrawal of Israeli troops, then, state to state agreements, and finally the resolution of the refugee problem. That Moscow does not consider the refugee problem one of prime importance is evidenced by a radio Moscow broadcast on June 27, 1969 which stated that "all attempts of imperialist propaganda to maintain that the center of gravity in the Arab-Israel conflict has moved into the struggle of the Palestinian partisans are, all the same, naked demagogy; the main side of the conflict can only be Israel and the Arab states".[21] Although Moscow's attitude since then has changed slightly, as the guerillas have emerged as a more potent force, one can still conclude that despite the warmth found for the guerillas in the Soviet press, that for the present the Soviet Union and the guerillas are far from agreement on the priorities for peace in the Middle East.

Since the visit of Yasir Arafat of Al Fatah to the Soviet Union this winter, the Soviets have been quick to hand out praise for his organization. However, due, on the one hand, to the growing popularity of the guerillas in Arab lands, and considering, on the other hand, the positions of the Russians and the guerillas on the various issues, one could conclude that this friendship is little more than expedient propaganda, at least for the moment. Yet one must wonder how lasting this attitude may be. How long will the Russians wait for the diplomatic settlement which will assure them of their minimum goal of opening the Suez Canal? Should the U.S.S.R. grow impatient, it could possibly take the initiative by encouraging the Egyptians to try to force the Israelis from the east bank of the canal, or they might decide to adopt the guerillas' attitude and press for the eventual destruction of Israel. Approaches such as these would seem unrealistic because of Moscow's basically cautious manner in dealing with the problem so far, and also there is no substantive evidence that Moscow has abandoned the state to state approach towards resolving the conflict. Quite the contrary seems to be true for basically two reasons. Firstly, the Soviets have shown a preference to dealing with states rather than various political organizations, other than the communist parties. The Soviets have adopted this attitude because they like to deal with groups and bodies which they can hold responsible to see that their agreements will be enforced.

They also like to have some measure of control over the situation and it is far easier to make a state keep its promises than an irresponsible revolutionary organization. Secondly, all Soviet peace proposals have adopted various mutations of the same approach, but they are all virtually the same, that being, that they have placed the refugee problem to secondary role while the primary task remains the removal of Israeli troops. From a Soviet perspective, this approach is quite logical. After all, one of the urgent goals of the U.S.S.R. is to open the Suez Canal, not to create an Arab Palestine. Furthermore the Russians have no desire to run the risk of a great power confrontation. In addition any deviation from the present approach would seem unlikely unless the success of the new approach could reasonably be expected. Although any new approach may seem improbable, it is not inconceivable, and one should be cognizant of the possibilities should the Russians grow impatient.

Footnotes at end of article.

Another possibility worth exploring is what would happen if the Russians were able to achieve a political settlement along the lines that they have previously suggested. In other words, what would happen once the Soviets had accomplished their goal of reopening the Suez Canal? What more could the Russians then offer the Arabs after the occupied lands are returned? Would the Russians then conceivably aid the Palestinians in their attempt to liberate Palestine? There is no reason to believe that the Arabs will find a peace settlement in 1970 any more to their liking than the ceasefire in 1967, the 1956 U.N. peace keeping operations, the 1948 armistice, or the 1947 Partition Plan for that matter, unless, the settlement would give the area now called Israel to the Arabs. In brief, what they have failed to obtain in the wars, they hope to achieve at the conference tables, or by other means if necessary. Logically, then, if the Russians are to continue to court the Arabs, then, they too must continue an anti-Israel campaign, regardless of any peace settlement which may have proved acceptable. At this juncture the policies of the Soviet Union, the Arab states, and the guerrillas will be in virtual harmony.

What evidence can I submit to substantiate this hypothesis? First, the Soviets and more specifically the Moscow oriented Communist Party of Jordan set up "partisan forces" which are really communist guerrilla organizations. In the Partisan Forces Manifesto published in the pro communist, Beirut daily *Al Nida* it was stated that, "the partisan forces fight against Zionism and imperialism and is a partisan of the liberation battle fought by the forces of freedom, peace, and progress led by the U.S.S.R."[22] At present these "partisan forces" differ from the other guerrilla organizations in that they do not call for the dismantling of Israel. Yet, nothing precludes them from adopting such a position in the future. In fact, the natural progression of events would logically require them to do so. If they are to receive any substantial support from the Palestinians, and other Arabs, then they must offer some means of satisfying Palestinian desires, which would mean the advocacy of an Arab Palestine in what is now Israel. To advocate a peace settlement is a first step, but to reject a continued struggle for the liberation of Palestine, once the Israeili troops are withdrawn from the occupied territories, is quite a different story. In short these partisan forces must adopt a more militant position or they will wither when and if a peace settlement is agreed upon. Second, the wording of the various peace proposals, especially those of the Soviet Union, is ambiguous, to say the least.

For example, part of the Soviet peace plan as presented in the March 31, 1970 edition of *New Times* calls for "return to the rightful owners of all that was seized by force." At present, this proposal is referring to the return of the occupied territories, but if this wording is taken literally, and if one adopts an Arab point of view, that Israel itself is really an occupied territory, then, this proposal can be used by the guerillas to press for the return of Palestinian lands now controlled by Israel which the Palestinians say is about 93% of present day Israel. Another part of their peace proposal states that "as soon as the Israeli troops withdraw *behind the line they occupied* prior to June 5, 1967, the full end of the war should be officially proclaimed. Particular attention should be paid to the words "the line they occupied" because this phraseology in no way implies that such lines are permanent boundaries. Thus, while the occupied territories will be secured for the Arabs, Israel will not necessarily have recognized and permanent borders. Finally, the Russians have included the inevitable escape clause for her Arab clients because this peace proposal further states "It stands to reason that in case *Israel* violates its commitments on the withdrawal of troops, the Arab countries will have the right to abstain from carrying out their corresponding commitments." Who is going to decide whether a violation has been committed—the Arabs? If so, one could easily invent a pretext for resuming the hostilities. Even if the Russians do have the best of intentions, one can not ignore the fact that there are too many loopholes (loopholes which are very convenient for the Arab states and the guerillas) in the Russian peace plan, to realistically believe that if this proposal was adopted that a lasting peace would follow.

More alarming to my mind, however, is that many Russian periodicals have picked up the Arab and the guerrilla charge that the Israelis are really neo-Nazis. That anyone could link the survivors of Hitler's death camps to neo-Nazism is the height of ridiculousness and/or international irresponsibility, even if one attempts to quickly dismiss such charges as propaganda for Arab consumption. Yet, the Soviet Union does exactly this sort of thing. Constantly in the Soviet press the words Zionist expansion and fascist aggression are used interchangeably. For example, one Soviet publication stated that "in this case, the situation is similar to the one which existed during the Second World War when the resistance movement was active in Nazi-occupied territory".[23] Every conceivable link between Israel and the Federal Republic of Germany is analyzed. The usual Soviet conclusion is that the result of any connections between these two states can only lead to the most sinister of schemes. The Soviets maintain that it is West Germany which supports Israel's armed forces.[24] When one considers the deep hatred the Soviet leaders and indeed, the Soviet people have for Germany, one must wonder about the implications of such linkages. Certainly a peaceful atmosphere has not been created. In addition, the Soviets have shown increasing amounts of "sympathy" for the Palestinian viewpoint. As early as February 12 of 1969 Radio Moscow broadcast that "the Soviet people regard the Arab resistance with true sympathy and offer *the joint Arab* causes all support".[25] Since the visit of Yasir Arafat to the U.S.S.R. and his talks with the Asian Solidarity Committee, Soviet feeling for the guerrillas has warmed in about proportion to the increase in the guerrillas' popularity in the Arab world.

In discussing this question whether the Soviet Union might conceivably allow Israel to cease to exist, I have used mostly circumstantial evidence. Yet, one can not help but get the feeling that the Soviet Union is using what some people refer to as "salami tactics"; that is, they are trying to achieve their major goals slice by slice. Each slice of the salami is a small step so much so that it is hardly noticed, but when people put all the small slices together they are alarmed at the result. An example of Soviet salami tactics would be the progression of events on the Egyptian front since February of this year. First, the Soviets installed SAM–2 sites in the Nile valley, and a little late SAM–3 sites (mobile) and nothing was said in protest in the West because they accepted the Soviet line that they were purely for defense. Next Soviet pilots appeared in the area, another piece of the salami, as this was a logical extension of the defense of the Nile valley. Then Soviet missiles began to inch closer to the canal until Israel's air supremacy near the canal was threatened. Finally, there was the disclosure by Assistant Secretary of State Sisco on Sunday July 12, 1970 that the Soviets were sending the Egyptians amphibious landing craft. One can only wonder with fear when the next piece of salami will be cut or if the Israelis will take the initiative and prevent what they regard to be the further deterioration of their position on the canal. I am one who

believes very strongly that the Soviet Union uses such salami tactics and therefore, I can not imagine the Soviets risking their tremendous investment in the Arab world by settling for a status quo peace afer they have managed to secure the opening of the Suez Canal. For a while the Arabs may be content with the return of the occupied territories, but eventually the guerillas will put pressure on the Arab states who will then turn to their big power ally and ask for assistance in the liberation struggle.

What, then, can one conclude from this discussion of the Soviet Union's relations with the Palestinian guerillas? It is apparent that the aloofness with which the Russians used to handle the guerillas is no longer acceptable. As the guerillas continue to grow in popularity and as an important factor in the Middle East conflict, they will receive a more attentive ear at Moscow. At present, there are two major factors which prohibit the Russians from giving more support to the guerillas. One is the fact that the guerillas and the Soviet government are at loggerheads over various issues concerning the conflict, and second, Moscow has an aversion for dealing with non-state entities, other than the communist parties. The Russians prefer state to state relations as opposed to dealing with irresponsible popular movements. Should some type of settlement be agreed upon, the situation would change. I believe that the guerillas have had the effect of forcing the Russians further to the left. A peace settlement might accelerate this pushing to the left, as the Kremlin would seek to protect its very expensive Middle East investment. Perhaps, Nasser was right when he said that it is the debtor nation who controls the actions of the creditor nation.

A SHORT COURSE IN HUMAN RELATIONS

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 15, 1970

Mr. WOLFF. Mr. Speaker, I would like to include in the RECORD for the Members' consideration "A Short Course in Human Relations" that appeared in the official publication of the 2d Marine Division Association. Surely there is much in this that could give us all reason for thought.

A SHORT COURSE IN HUMAN RELATIONS

The six most important words: *"I admit I made a mistake."*

The five most important words: *"You did a good job."*

The four most important words: *"What is your opinion."*

The three most important words: *"If you please."*

The two most important words: *"Thank you."*

The one most important word: *"We."*

The least important word: *"I."*

THE CHELSEA CLINTON NEWS SPOTLIGHTS THE PROBLEM OF LEAD POISONING

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 15, 1970

Mr. RYAN. Mr. Speaker, the Housing Subcommittee of the Banking and Currency Committee held 2 days of hearings on July 22 and 23 on legislation which deals with the problem of childhood lead poisoning. The distinguished chairman of the subcommittee, Mr. BARRETT, is to be commended for focusing congressional attention on this serious health menace which needlessly kills too many children each year.

As the sponsor of a package of three bills aimed at alleviating this disease, I am delighted that there are 19 cosponsors of my bills and that similar legislation has been introduced by other Members. In the Senate bills have been introduced by Senators KENNEDY, SCHWEIKER, and SCOTT which also deal with this disease.

The Housing Subcommittee had before it two of my bills—H.R. 9192 and H.R. 11699.

H.R. 9192 authorizes the Secretary of Housing and Urban Development to make grants to local governments to develop programs designed to detect the presence of lead paint and to require that owners and landlords remove it from interior walls and surfaces.

H.R. 11699 requires that a local government submit to the Secretary of Housing and Urban Development an effective plan for eliminating the causes of lead-based paint poisoning as a condition of receiving any Federal funds for housing code enforcement or rehabilitation. It also requires that these plans be enforced.

My third bill, H.R. 9191, is pending in the House Interstate and Foreign Commere Committee, and I am hopeful that hearings on this legislation will be held in the near future.

This bill establishes a fund in the Department of Health, Education, and Welfare from which the Secretary can make grants to local governments to develop programs to identify and treat individuals afflicted with lead poisoning.

The problem of lead poisoning is a serious one. In the past, local governments have been either unable or unwilling to deal effectively with the disease.

In the meantime, more than 225,000 of the Nation's children between the ages of 1 and 6 are suffering from lead poisoning. For this reason, Federal legislation is critically needed.

I am inserting in the RECORD articles which appeared in a leading New York City community newspaper, the Chelsea Clinton News on July 9 and July 16. Written by Bruce Buckley, "Focus on 'Silent Epidemic'" tells about the attempts to detect lead poisoning on the lower West Side of Manhattan.

I urge my colleagues to read these articles, for they once again point out that, as time passes by, more and more children are afflicted with lead poisoning. The time to pass legislation is now, so that lead poisoning can be eliminated as a threat to the lives and health of our children.

The articles follow:

FOCUS ON "SILENT EPIDEMIC"

(By Bruce Buckley)

One night several months ago Avelino Perez was watching his infant daughter Gloria playing in the kitchen of their apartment on West 26th Street.

As he looked on, the chubby 20-month-old girl picked some flecks of paint from the wall and popped them in her mouth.

Mr. Perez called to his wife in another room (her name is also Gloria) to tell her what the toddler had done.

Mrs. Perez rushed into the kitchen, grabbed Glorida and quickly washed her mouth out with soap and water. She knew about the danger of eating paint from the walls of old apartments.

Several months later, Gloria developed convulsions. She was taken to St. Vincent's Hospital on May 19 and admitted. The Hospital, noting the age and the address, suspected lead poisoning, as did her mother. A series of tests were taken, including X-rays of the long bones and blood analysis, but nothing in these tests indicated any danger. The X-rays showed no evidence of lead in the marrow of the long bones; the blood test came back showing a level of 60 micrograms, which is considered the upper level of normal; and finally there was no evidence of anemia.

Since 60 micrograms is the upper limit of a normal reading, a second blood test was ordered, according to Dr. Vincent Fontana, head of the hospital's Pediatric Department. By this time, the little girl had recovered from the effects of her convulsive seizure, and she was released. Mrs. Perez was told to bring the child back to the hospital in two weeks. When she returned, she was examined and pronounced well. But the hospital still had not received the results of the second blood test from the Health Department, where lead analysis is undertaken. Even up to this week, the result of that second test is still a mystery.

Dr. Fontana suspects that the Health Department discovered an abnormal amount of lead in the second analysis, since right after the child was released from the hospital, a public health nurse showed up at the Perez apartment and one of the questions she asked was, had Gloria eaten any paint?

An inspector from the Health Department turned up three weeks later and took samples of the paint from the walls of the Perez apartment. These reportedly turned out positive for lead, according to Dalila Fontanez, a tenant organizer who has been working for a year and a half with the residents of several deteriorated tenements on that block. Miss Fontanez talked to the inspector for Mrs. Perez, who speaks little English.

Questioned about the Perez case, the Health Department refused to divulge any information.

But on the basis of a reported case of lead poisoning, the Department did send a mobile unit to 26th Street last Wednesday to test children from four blocks around.

In the hot afternoon sun about a dozen parents with more than 20 toddlers in tow waited for the mobile unit to arrive. It came late, a Red Cross truck with several volunteers and a doctor.

Dr. Jacob Glaubach, the Lower West Side Health Officer, arrived too, along with Rose Whitman, the public health education consultant for this area.

It was the first time the mobile unit had been used in the Lower West Side. Before this, the unit has been sent exclusively to "high risk" areas.

A table was set up in the shade and parent lined up to sign a Health Department form requesting lead analysis. Several children had come with neighbors and could not be tested. Parents are required to sign consents. One woman who could not write signed the consent slip with a large X. For a moment it created a stir. Was that an acceptable signature?

A flash of annoyance from Dalila Fontanez: Let's not get bogged down in bureaucracy now!" Miss Fontanez is a college student who lives on the block and has been fighting the landlord of the bad houses for a long time.

Finally a volunteer walked over and signed her signature beneath the X and it was all right.

One by one the children climbed into the back of the Red Cross truck, which is normally used for disaster relief work. Con Edison also contributes the use of a truck. Some of the youngsters grimaced as the syringe was jabbed into their veins; other wailed. Not all of them could be tested. The doctor drawing the blood found difficulty finding tiny veins on some of the chubbier ones and they were given an appointment to come to the Health Center at 303 Ninth Avenue. Gloria Perez was one of them.

The parents were told they would receive the results in about a week.

Children who show evidence of lead in their systems—.06 milligram is considered the danger level—will have a public health nurse sent to their homes immediately. The nurse will determine whether hospitalization is required. Later an inspector arrives to test the paint on the walls for lead. Apartments in which lead is uncovered are ordered scraped or covered with wall boards. If the owner fails to comply, the city does the work and bills him for the cost.

Sometimes described as the silent epidemic, lead poisoning affects thousands of children in the New York City area. It is a disease of the environment and a disease of the poor. It is also insidious. Initial symptoms—nausea, lethargy, clumsiness, constipation—are the same as symptoms of many other diseases and uneducated parents often don't suspect the real cause. In its later stages the disease causes irreversible damage to the brain and central nervous system. Death often ensues, but many afflicted children live a kind of living death from the ravages of the disease.

Caught early enough, the disease can be treated and the deadly process reversed. A drug know as Calcium EDTA is used to leech the poison from the system. The lead clings tenaciously to the bones, but eventually it can be expelled.

The principal victims of lead poisoning are children up to the age of five. In this age bracket, they often have a craving for foreign substances called "pica" and will eat crayons, cigarettes, clay, matches—and flakes of wall paint. This would not be harmful, except for the fact that in deteriorated apartments, the older layers of lead-based paint, outlawed since 1947, become exposed.

Estimates on the number of undetected cases in the city vary greatly. Dr. Vincent Guinee, director of the Bureau of Lead Poisoning, estimated last week that there are 6000 to 8000 cases. Others have calculated that there are perhaps four or five times that number. Since January the city has seriously begun an effort to uncover undetected cases.

The budget has mushroomed from $150,000 to $2.4 million a year. Naturally the number of cases has grown too. Dr. Guinee reported that 720 children with lead poisoning have been found between January 1 and the week of June 26.

In the Lower West Side there have only been four cases in that period.

"It must be hidden," said Rose Whitman. "We're trying to ferret it out."

LEAD POISONING FOUND HERE IN SECOND CHILD

A second case of lead poisoning was uncovered in Chelsea last week as a result of increased attention to the problem here by the Health Department.

Two-year-old Ricardo Salgado was hospitalized at Bellevue after analysis of his blood revealed an excessive amount of lead in his system.

The little boy, who lives with his mother and older sister in a cramped four-room apartment at 229 West 26th Street, was one of 12 children tested by a mobile unit on Wednesday, July 1. His was the only positive finding.

Ricardo will be in Bellevue for some time, his mother was told by a doctor at the hospital. The level of lead in his test—.07 milligrams—is considered "very serious," according to Mrs. Rose Whitman, public health education consultant on the Lower West Side.

Left untreated, lead poisoning can lead to irreversible brain damage and death. It has been estimated that thousands of children in deteriorated buildings throughout the city are affected by the disease. Its insidious danger is that parents often confuse the initial symptoms with those of other, less deadly ailments.

The usual source of the lead is old flaking wall paint, which some children pick off and eat. Although lead-based interior paint has been outlawed in New York City since 1947, old layers of it often become exposed in rundown houses.

As part of the stepped-up drive to uncover undiagnosed cases, the Health Department's mobile testing unit will be operating Wednesday and Thursday afternoons at various spots throughout the Lower West Side Health District (Battery to West 72nd Street) from the end of July through the month of August.

Children can also be tested at the Lower West Side Health Center, Ninth Avenue at 28th Street, every morning and all day Wednesday.

Mrs. Whitman said the Health Department continues to "keep tabs" on children with positive, but less than critical, test results.

The campaign began in earnest here after a case was diagnosed on 26th Street.

When a critical case of lead poisoning is discovered—a level of .06 milligrams in the blood is considered critical—the Health Department rushes a nurse to the home of the child. She and the family physician, if any, determine whether the child requires hospitalization. Later a Health Department inspector arrives to examine the apartment. He then orders the landlord to scrape the walls or to cover them with wallboard. If the landlord fails to comply, the work is done by the city and the owner is billed.

The mother of two-year-old Ricardo, Mrs. Otilia Santiago, said she had seen the child on several occasions eating chips of paint from holes in the walls. Each time she caught him, the boy was punished, she said, but he continued doing it.

Mrs. Santiago speaks little English. Dalila Fontanez, a neighbor who has been active in the campaign against lead poisoning as a staff member of the Chelsea Action Center, translated for her.

The mother said she had noticed a loss of appetite in the child about three months ago and became very concerned. Fearing that he might have worms, she took him to a private physician who gave him some medicine without testing him, she said. A month ago Ricardo developed cold symptoms. She brought him to Bellevue Hospital, where he was given a bottle of liquid she took to be cough medicine.

Mrs. Santiago shares her neat apartment with a sister, who looks after the two children. Pregnant now with her third child, she will soon give up her $70-a-week job as an operator in the garment center. She receives no welfare assistance.

KOSCIUSZKO HOME NATIONAL HISTORIC SITE

HON. HENRY HELSTOSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 15, 1970

Mr. HELSTOSKI. Mr. Speaker, the history of the Poles with respect to the growth of the United States is well known to every American and especially to people of Polish descent.

In writing the history of the Revolutionary War, the two outstanding Polish names are those of Kosciuszko and Pulaski. They gave so much of their time and energy to the American battle for freedom during the days of that war.

While many American cities have statues to one or both of these heroes, no effort was ever made by the American Government to honor these two men who voluntarily came to these shores and risked their lives in behalf of the American colonists who fought for freedom from their mother country.

An effort is now being made to honor General Kosciuszko through the creation of the Kosciuszko Home National Historic Site. Mr. Edward Piszek, a Polish-American businessman in Philadelphia has purchased a historic and old building on Pine Street in Philadelphia which, nearly 200 years ago, was the residence of Kosciuszko. The idea is to preserve this home and rehabilitate it as a museum honoring Kosciuszko.

The building is in an area which is scheduled for urban renewal and proposals have been made to the city authorities to save this edifice from the bulldozers and to maintain it as a historic site. Unfortunately the proposal did not meet with the approval of the city authorities which declared the necessity of the destruction of the building. Under these circumstances, the matter was brought to the attention of the Congress to have legislation passed which would establish this residence as the Kosciuszko Home National Historic Site.

To achieve this result, I have introduced H.R. 18249, which is presently pending before the House Committee on Interior and Insular Affairs, and, as of September 9, there have been nine similar bills introduced in the House. In the Senate a similar bill has been cosponsored by Senators HARTKE, SCOTT, HART, and SCHWEIKER.

Mr. Speaker, it is my hope that the 225th anniversary of Kosciuszko's birth, February 12, 1971, will be celebrated as the year when the American Government fully realizes the impact of Kosciuszko's effort in its fight for freedom through the establishment of the Kosciuszko home as a national historic site.

At this time, Mr. Speaker, I wish to congratulate Mr. Piszek for his untiring efforts in trying to achieve this objective and for his generosity in purchasing this home to perpetuate the memory of Kosciuszko through a physical expression of our thanks to a man of great military knowledge who was instrumental in America's fight for liberty and freedom.

NIXON DOCTRINE FOR KOREA

HON. EDWARD HUTCHINSON

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 15, 1970

Mr. HUTCHINSON. Mr. Speaker, the Nixon doctrine, which was formulated a little over a year ago, is now being implemented in South Korea where certain U.S. troop withdrawals have been scheduled.

In an August 30 editorial, the Detroit Sunday News notes that the doctrine was tested during Vice President AGNEW's recent visit to South Korea by the demand of that Government that we provide $3 billion for modernization of their Army. Not only were the South Koreans told we would not give them that amount of money, but also what we would make available would be over a period of time, at the end of which we would expect to have all our GI's out upon the completion of the modernization of the South Korean Army.

I believe my colleagues will find the Sunday News' appraisal of the Nixon doctrine as it relates to South Korea to be interesting, and I therefore include it in the RECORD:

NIXON DOCTRINE FOR KOREA—KEY IS SELF-DEFENSE

It's going to be tough sledding reducing our armed manpower in Asia and the Pacific and persuading our Asian partners that the Nixon Doctrine means what it says: Self-defense is the new watchword if they genuinely value their independence and freedom.

The first crunch has come in Korea. There will be others. There will have to be some hard reappraising by our allies and a dismantling of the comfortable habit of mind that, rain or sunshine, Uncle Sam would always be there, militarily and economically, fighting each partner's battles.

Uncle Sam will still be there, his defense pledges intact, his nuclear umbrella deterring the biggest bullies. But no longer will he fight other people's battles unless it is demonstrably proven his partner will carry the principal combat burden and face up to the sacrifices.

The hard nut to crack on Vice President Agnew's tour was Korea, where 17 years after the armistice 63,000 American troops are on station to bolster the efficient South Korean army and, politically, to serve as a tripwire should North Korea strike again. As soon as we said we'd reduce that American component to 43,000 by next June, South Korea began hollering, threatening the whole cabinet would resign if we persisted with implementing the Nixon Doctrine in Korea.

We ignored that first bluff and Agnew arrived. He made it clear we meant business and then South Korea declared it wouldn't even discuss troop reduction until we guaranteed about $3 billion to modernize its army. The administration didn't fool around. "Not feasible, unrealistic," retorted Agnew's backstop in Washington, Defense Secretary Laird, refraining, however, from categorizing the demand for what it was—impudent blackmail.

Blackmail won't work if you've got no bargaining line of retreat and South Korea has no place else to go for aid. So Agnew made it clear the GI's would be withdrawn, that maybe $1 billion over five years for modernizing the Korean army might be authorized by Congress, and, for a clincher, that we expected to have all the GI's out when that army modernization was complete.

When you've got a new master plan—and the Nixon Doctrine promises to be a sound strategic objective—stick to it and don't permit reluctant allies to nibble it to death. We've made a good start.

THE RECORDER WILL COMMEMORATE 100TH ANNIVERSARY

HON. R. LAWRENCE COUGHLIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 15, 1970

Mr. COUGHLIN. Mr. Speaker, I am pleased to acknowledge a milestone in the life of one of the many fine community newspapers that serve the 13th Congressional District of Montgomery County, Pa.

The Recorder, originally the Conshohocken Recorder, began publishing weekly 100 years ago this year at 64 Fayette Street in Conshohocken, the third oldest borough in the county.

In saluting the Recorder, I want to pay tribute to the role of the printed media in serving the varied areas—suburban and rural—that comprise the county.

Community newspapers such as the Recorder, supplementing and complementing the three competent daily newspapers in the county, are finding new roles of service. As the suburban areas spread further out into the county, the community newspapers are expending both their coverage and services.

Although the past quarter century has seen the untimely demise of many reputable daily newspapers, the community newspaper field has been growing. I think that my district is particularly fortunate in having many newspapers serving the various communities.

The Recorder, as the oldest community newspaper in the county, merits special praise for a century-old publishing record through major wars and attendant shortages of materials and labor. It is a doughty old veteran that holds an especial esteem in the hearts of its readers.

My warmest congratulations go to the Recorder and its staff on this 100th anniversary. I wish the newspaper and staff unending years of service to the community.

THE CAMBODIAN INCURSION FROM A MILITARY POINT OF VIEW

HON. JOHN ROUSSELOT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 15, 1970

Mr. ROUSSELOT. Mr. Speaker, when President Nixon announced that he was sending allied forces into Cambodia, he promised that the action would save American lives. Each week since we have received fresh evidence that the Cambodian operation has had just the effect that the President predicted.

The sharp decline in American casualties since Cambodia is gratifying to those of us who have supported the President's plan for ending the war. There can no longer be any doubt that the Cambodian operation was a tactical victory.

However, the results of that operation may be even more meaningful in a strategic sense. The declining casualty rate means that the enemy's capability to wage war has been seriously hampered and that bodes well for the President's Vietnamization program and the further withdrawal of more American troops.

For a penetrating discussion of these facts, I would like to call my colleagues' attention to a recent editorial in the Houston Post which analyzes the Cambodian incursion from a military point of view:

PLUSES OF CAMBODIA

As time goes by, President Nixon's decision to send American troops into Cambodia seems to be paying off, both tactically and strategically.

The most important result to date is that the President's prediction that destruction of the Communist sanctuaries would save American lives is being borne out.

It has been about four months since the Americans and South Vietnamese moved into Cambodia, and two months since the Americans pulled out. Not enough time has passed for a conclusive appraisal of the over-all strategic success of the operation, but sufficient time has elapsed to reveal some tactical pluses and minuses that have accrued.

Writing in U.S. News & World Report, Col. William C. Moore, an Air Force officer who has served as planner at Allied headquarters in Europe and with the Strategic Plans Group of the Joint Chiefs of Staff, assesses the results to date and finds that the pluses have far exceeded the minuses.

He points out that the Communists have been slow in re-establishing new base areas from which to conduct operations against South Vietnam, and that such bases, or sanctuaries, are extremely important to combat operations. They permit combat troops to rest, regroup and plan new attacks, and most importantly, to assemble in strength before commitment to battle.

The newest strongholds apparently will be in Northeast Cambodia and Southern Laos, approximately 275 miles from Saigon. Enemy troops will no longer have a short night jaunt to their targets, as they did when their bases were in the Fishhook and the Parrot's Beak. Getting troops to vital targets will be a long-drawn-out, complicated and hazardous undertaking.

"Under these conditions," Col. Moore writes, "it is doubtful whether the enemy will ever again be able to mount a large-scale operation in the Mekong Delta, or for that matter, in the southern half of South Vietnam."

Even more heartening is the decline in casualties, ambush attacks, terror and sabotage attacks, and other combat operations by the enemy since the Cambodian bases were cleaned out. In the two months before the Cambodian operation, the weekly average of Americans killed in action was 108. During the May and June fighting in Cambodia, the average rose to 141. But in July and August, the two months following the withdrawal, the weekly average dropped to 70, a 35 per cent decline since pre-Cambodia.

True, there has been a 39 per cent decrease in Communist troops killed in action in the past two months, also, but Col. Moore considers this a plus rather than a minus because it indicates an unwillingness by the enemy to engage in battle.

These and other tactical gains point toward significant progress in the strategic sense, as well. Vietnamization is moving ahead. U.S. troops are being withdrawn on schedule, and draft quotas at home are the lowest since 1954.

Col. Moore admits readily that the U.S. forces in South Vietnam or Cambodia are not out of the woods yet, and that the end of the monsoons may see an acceleration of enemy activity, accompanied by mounting casualties. Hanoi, having suffered a crippling blow to its ability to attack South Vietnam, may try to redress the setback by stepped-up offensives in Laos and Cambodia. The odds at present, however, do not favor early success in such a venture, the colonel maintains, and we can hope that he is right.

THE CONVERSION RESEARCH AND EDUCATION ACT OF 1970

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 15, 1970

Mr. ANDERSON of California. Mr. Speaker, we, in this country, are blessed with a highly skilled technical and scientific community. They have contributed greatly to our success as a nation. They have turned seemingly impossible tasks into reality.

Over $17 billion of America's $26 billion research and development industry is funded by the Federal Government. In the past, we have geared Government-sponsored research and development toward reaching the moon and providing the best arms and equipment for our military. Eighty-three percent of Federal expenditures for research and development is spent by the Department of Defense, the Atomic Energy Commission, and the National Aeronautics and Space Administration. In addition, one of every four technical personnel in industry is engaged in defense-related work and one-half of the Federal Government's scientists and engineers and technicians are employed by DOD, NASA, or AEC.

Today, we are concentrating on improving our habitat on earth, and we are disengaging from Southeast Asia. We have redirected our priorities to the resolution of our social ills and the urgent needs of our people. We have cut back on defense and aerospace spending and have increased spending on pollution control, housing, and transportation.

Because of cutbacks in Government orders for missiles, planes, and space vehicles, profits and employment in aerospace are way down. From a high of more than 1.4 million employees in 1968, aerospace employment is down by more than 200,000 workers, mostly skilled technicians and engineers.

California, a center of the aerospace industry, has been especially hard hit. In May 1968, California's unemployment rate was 4.3 percent. In July 1970, California recorded a 6.2-percent unemployment rate. Orange County alone has laid off 10,700 aerospace workers in the last 12 months.

Mr. Speaker, we must take great care to cushion the impact of our economy and ease the transition of men and resources to civilian-oriented activities.

Thus, Mr. Speaker, I am particularly pleased to coauthor the "Conversion Research and Education Act of 1970." The purpose of the act is to help the Nation convert its resources and talent from defense-related activities to socially productive civilian-oriented activities. This bill provides an innovative approach to a coordinated program of conversion research and education for defense-oriented scientists, technicians, and management personnel.

The bill authorizes a total of $450 million for specific programs of education, research, and assistance to small business firms, in order to aid in the conversion of defense research and development to civilian, socially oriented research and development.

It provides that the National Science Foundation sponsor research on conversion and that it develop and administer retraining programs for management personnel in defense-related research and development.

In addition, the bill directs the Small Business Administration by providing technical grants, loan guarantees and interest assistance payments.

Mr. Speaker, I feel that this measure is a valuable first step toward insuring the future prosperity of our Nation by directing our technical and scientific talent toward the solution of our domestic ills. We must channel the experience and knowledge of this vast resource into the fields which will improve the quality of life for all our citizens.

HEALTH AND SAFETY STUDY SHOULD BE AVAILABLE TO CONGRESS

HON. DOMINICK V. DANIELS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 15, 1970

Mr. DANIELS of New Jersey. Mr. Speaker, the grim facts of hazardous and toxic conditions in America's workplaces unfolded before the Select Subcommittee on Labor during 15 days of public hearings in the 91st Congress on occupational safety and health. We learned of lethal substances in the chemical industry, or airborne dust particles in asbestos and cotton manufacturing sites, and of dangerous pesticides used in modern agricultural practices.

All the testimony revealed that the lives of America's workers are jeopardized daily by health and safety hazards both seen and unseen. Since the conclusion of testimony, a report by Mr. Gerome B. Gordon of Delphic Systems and Research Corp. has been made available to the Department of Labor. On August 4, I asked the Secretary of Labor to make one copy of this study available forthwith to every member of this subcommittee. In his reply to me Secretary Hodgson indicated that the copy he was forwarding to me as chairman was only preliminary and had not been accepted by the Department nor available for distribution.

This report indicates that statistics concerning job safety do not reflect the true nature of accidents and injuries, and that the real count may run as much as 10 times higher than those presented to this subcommittee.

The house occupational safety and health bill, H.R. 16785, is now pending before the Rules Committee. A similar bill in the Senate is before the Labor and Public Welfare Committee. In order for Members of both Houses of Congress to judge accurately the need for such legislation, all relevant material should be available to them, including the Gordon study even if such study is considered by the Labor Department to be incomplete.

Preliminary findings are often released to Congress by Government agencies, and when we are speaking about voting on legislation of major importance to the lives of 80 million American workers, such documents should be supplied to every Member of Congress. I therefore urge the Labor Department to make the report available immediately to each Member of Congress in order to afford him the opportunity to study it before the legislation reaches the floor.

I am including in this regard a recent article by Mr. Jack Anderson concerning the findings of the Gordon study:

[From the Washington Post, Sept. 11, 1970]

ROCKS OF JOB SAFETY COULD TRIP NIXON

(By Jack Anderson)

President Nixon's election-eve flirtation with the labor movement could break upon the rocks of job safety.

Government statistics show that 55 Americans lose their lives and another 27,200 are injured every day on the job—an alarming total higher than the U.S. casualty rate in Vietnam.

Indeed, a suppressed study claims that the true accident toll is even higher, that the government has been undercounting the casualties by as many as 200,000 a year.

This explosive study was prepared for the Labor Department by Jerome Gordon, Allan Akman and Michael Brooks at a cost to the taxpayers of $58,000. The big employers, however, don't want the taxpayers to learn what their $58,000 study has uncovered.

For the suppressed facts might convince Congress to pass tough federal legislation to supplant the jumble of state laws that now regulate occupational injuries and illnesses.

The labor unions favor a strong federal law, which Sen. Harrison Williams (D-N.J.) and Rep. Dominick Daniels (D-N.J.) are now trying to push through Congress. The Chamber of Commerce would like a weaker bill, introduced by Rep. William Steiger (R-Wis.) which would merely establish better cooperation between labor, management and the government.

NIXON'S DANCE

At a secret White House strategy session on Aug 11, the President's new management czar, George Schultz, asked GOP congressional leaders to "push the occupational safety bill."

"The Steiger bill is far better, but the unions favor the committee (Williams-Daniels) bill," he said sadly. He urged the GOP leaders to seek a compromise, perhaps the Williams-Daniels bill stripped of the "penalties and harassment."

Meanwhile, the Nixon administration, under pressure from the Chamber of Commerce, has kept the $58,000 study under wraps. This column, however, has obtained a bootleg copy.

It states that the Labor Department's annual survey of work injuries "is the only major national source of information," yet contends that "the representativeness and validity of the survey is seriously restricted and impaired."

INJURIES NOT REPORTED

Comparing what employers reported to the federal government with actual findings in California, the study charges:

"Over 36 percent of the firms examined actually had 'injuries' while reporting 'no injuries' to the Bureau of Labor Statistics . . . On a national basis this means that approximately 200,000 disabling work injuries . . . are missed."

"Information compiled from these firms in California revealed a ratio of 10 serious injuries for every disabling injury reported. Extrapolated to the national level, this means that the current annual level of 2.5 million disabling injuries reported could rise to over 25 million 'serious injuries.'" The report classifies as a "serious injury" one that keeps a worker home for a day or more.

VICE PRESIDENT AGNEW'S ASIAN MISSION

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 15, 1970

Mr. DERWINSKI. Mr. Speaker, the very effective service rendered the Nation by Vice President SPIRO T. AGNEW abroad as well as at home is duly noted by the Chicago Sun-Times in a very objective editorial Friday, September 4, which I direct to the attention of the Members:

AGNEW'S ASIAN MISSION

Vice President Agnew displayed a gift for diplomacy and negotiation on his trip to the Far East. His mission was to tell Asian leaders that President Nixon is firm in his intention to reduce the U.S. combat presence in Asia and to give assurance that under the Nixon Guam Doctrine of 1969 U.S. help would be provided where needed.

Asian leaders do not like the Guam Doctrine. Under its terms the United States will give economic aid and military equipment to an Asian nation—but only after that nation has shown it is helping itself. This is a departure from past U.S. policy under which U.S. aid was likely to be freely given to any nation raising a cry of the threat of a Communist takeover.

Agnew's first test was South Korea, where President Chung Hee Park demanded $3 billion in economic aid and military equipment as "recompense" for U.S. withdrawal of 20,000 of its 64,000 troops stationed in South Korea. Agnew parried Park's lobbying with skill and promised nothing—except that the troops would be withdrawn.

Cambodia was an even sterner test. Its Chief of state wanted blanket assurance of U.S. military help against the Communists even to the point of sending U.S. troops back into Cambodia. Here, too, Agnew managed to leave his host with a feeling of warm friendship and hope—but without making any commitments.

Agnew's trip has won him added credentials for his next job, that of campaigning for Republican candidates in the November elections. It can be hoped, however, that he will continue to show the same gifts for diplomacy and tact in that job that he displayed in his delicate mission to the Asian nations.

GEORGE J. BURGER, NATIONAL SMALL BUSINESS CHAMPION, HONORED BY HOUSE SMALL BUSINESS COMMITTEE

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 15, 1970

Mr. EVINS of Tennessee. Mr. Speaker, the House Small Business Committee, which I have the honor to serve as chairman, recently paid tribute to Mr. George J. Burger, vice president of the National Federation of Independent Business. In this connection, I place in the RECORD a letter to Mr. Burger, signed by all members of the committee, and an article from Mr. Burger's hometown newspaper, the Standard-Star of New Rochelle, N.Y.

The letter and article follow:

SELECT COMMITTEE ON SMALL BUSINESS,

Washington, D.C., August 13, 1970.

Mr. GEORGE J. BURGER,

Vice President, National Federation of Independent Business, Washington, D.C.

DEAR GEORGE: The Members of the House Select Committee on Small Business take this means of commending and congratulating you for a half-century of outstanding service to the small businessmen of America.

Certainly your devoted and dedicated work with the National Federation of Independent Business and with other small business organizations has greatly strengthened small business and our competitive free enterprise system.

You have stood tall as a great champion of small business. Assisted by your vast experience and knowledge of small business, your determination, your wisdom and your enthusiasm, great progress has been made in assuring small businessmen throughout the Nation of a "fair break" in many areas of our competitive free enterprise system.

From the time that you assisted in organizing the New York Tire Dealers Association in 1920, you have fought the battle for small business—year in and year out—day in and day out—never relaxing your vigilance or diminishing your efforts.

Certainly one of the highlights of your career was the creation of the Small Business Administration as an independent agency in 1953 and as a permanent agency in 1958. The hand of George Burger—your advice and counsel—were much in evidence in the events that led to the achievement of these significant milestones in small business history in America.

You have battled for a "fair break" in taxes for small business—and you played important roles in the passage of such legis-

lation as the first step tax revision of 1958, the seven percent investment credit in 1962, and the equalization of taxes on tires in 1968, among others.

You have lived a full and useful life of service to this Nation, to Congress, and to small business throughout our country.

Certainly we wish for you many years of good health and happiness—and again, we want to thank you for your great service to this Committee and to the Congress.

With kindest regards and best wishes, we are

Sincerely your friends,

Joe L. Evins, Chairman; Wright Patman, Tom Steed, John C. Kluczynski, John D. Dingell, Neal Smith, James C. Corman, Joseph P. Addabbo, William L. Hungate, Silvio O. Conte, James T. Broyhill, Frank Horton, Laurence J. Burton, J. William Stanton, Daniel E. Button.

[From the New Rochelle (N.Y.) Standard-Star, Aug. 24, 1970]

GEORGE BURGER CITED FOR WORK IN BEHALF OF SMALL BUSINESS

George J. Burger, 30 Clinton Place, New Rochelle, has received the commendations and congratulations of the Select Committee on Small Business of the House of Representatives "for a half-century of outstanding service to the small businessmen of America".

Mr. Burger, who commutes between his home here and his Washington office, is vice president in charge of the legislative office of the National Federation of Independent Business.

He said the citation, signed by Rep. Joe L. Evins, chairman of the select committee, came as "quite a surprise" as he found it on his desk. It was signed also by members of the committee, Reps. Wright Patman, Tom Steed, John Kluczynski, John D. Dingell, Neal Smith, James C. Corman, Joseph P. Addabbo, William L. Hungate, Silvio O. Conte, James T. Broyhill, Frank Horton, Lawrence J. Burton, J. William Stanton and Daniel E. Button.

The citation lauded Mr. Burger's "devoted and dedicated work" with NFIS and with other small business organizations which "has greatly strengthened small business and our competitive free enterprise system".

"You have stood tall as a great champion of small business", the citation continued. "Assisted by your vast experience and knowledge of small business, your determination, your wisdom and your enthusiasm, great progress has been made in assuring small businessmen throughout the nation of a 'fair break' in many areas.

"From the time that you assisted in organizing the New York Tire Dealers Association in 1920, you have fought the battle for small business—year in and year out—day in and day out—never relaxing your vigilance or diminishing your efforts.

"Certainly one of the highlights of your career was the creation of the Small Business Administration as an independent agency in 1953 and as a permanent agency in 1958. The hand of George Burger—your advice and counsel—were much in evidence in the events that led to the achievement of these significant milestones in small business history in America.

"You have battled for a 'fair break' in taxes for small business—and you played important roles in the passage of such legislation as the first step tax revision in 1958, the seven percent investment credit in 1962, and the equalization of taxes on tires in 1968, among others.

"You have lived a full and useful life of service to this Nation and to Congress, and to small business throughout our country.

"Certainly we wish for you many years of good health and happiness—and again, we want to thank you for your great service to this Committee and to the Congress."
